GENERAL NOTES

1. All years referred to are fiscal years, unless otherwise noted.
2. Detail in the tables, text, and charts of this volume may not add to the totals due to rounding.
3. Passage of the Omnibus Budget Reconciliation Act of 1990 in mid-November made preparation of the 1992 budget by the legal transmittal date of February 4th especially difficult. The President's 1992 budget had to comply with technically complex new spending caps, pay-as-you-go limits, and reforms of Federal credit programs. If, as a result, errors have been made, they will be corrected as soon as they are identified.

I. THE BUDGET MESSAGE OF THE PRESIDENT

To the Congress of the United States:

I am pleased to present the *Budget of the United States Government for Fiscal Year 1992.*

The budget is consistent with the 5-year deficit reduction law enacted last fall. It recommends discretionary spending levels that fall within the statutory caps for defense, international, and domestic discretionary programs. It implements the entitlement savings and reforms enacted in the Budget Agreement. It conforms to the new pay-as-you-go requirements.

By holding the overall rate of growth of Federal Government spending to approximately 2.6 percent—below the inflation rate—the budget puts into effect the concept of a "flexible freeze," which is an essential means of bringing the budget into long-term balance.

The longest period of peacetime economic expansion in history has been temporarily interrupted. We can, however, return to growth soon—and proceed on the path to a new era of expansion. With that goal in mind, the budget places special priority on policies that will enhance America's potential for long-term economic growth, and that will give individuals the power to take advantage of the opportunity America uniquely offers.

To this end, I am again proposing tax incentives to increase savings and long-term investment.

On the spending side of the budget, the existence of a cap on domestic discretionry outlays rightly creates a competition for resources. Priorities must be set. This budget proposes that domestic investment be increased in the following key areas:

Education and Human Capital.–The budget proposes investments to prepare children better for school, to promote choice and excellence in our educational system, to improve math and science education, and to increase the access of low-income Americans to higher education.

Prevention and the Next Generation.–The budget includes proposals to help reduce illness and death from preventable diseases, and to reverse the long-term trend of underinvestment in children.

Research and Development and the Human Frontier.–The budget recommends an increase of $8.4 billion in the Federal investment in research and development, with special emphasis on basic research, high performance computing, and energy research and development. It proposes to extend permanently the tax credit for research and experimentation to encourage private sector R&D investment. In addition, the budget reflects the Administration's continued commitment to expanding human frontiers in space and biotechnology.

Transportation Infrastructure.–The budget supports an expansion of the Federal Government's investment in highways and bridges to over $20 billion within 5 years, and proposes substantial increases to improve the condition of the Nation's airports, to modernize the air traffic control system, and to continue to develop the transportation infrastructure for exploration and use of space.

America's Heritage and Environmental Protection.–The budget includes increased funds for the expansion and improvement of America's treasury of parks, forests, wildlife refuges, and other public lands; for the implementation of the Clean Air Act and other key environmental statutes; for the cleanup of pollution at various Federal facilities and at Superfund sites; and for protection and enhancement of coastal areas and wetlands.

Choice and Opportunity.–The budget provides: funds to help give parents greater choice in child care, health care, education, and housing; the resources to allow *all* Americans, especially those with low incomes, to seize the opportunities that such choice provides; and a proposal to establish Enterprise Zones to bring hope to our inner cities and distressed rural areas.

Drugs and Crime.–The budget further increases the Administration's investment in drug prevention, treatment, and law enforcement. And the budget substantially increases the resources available to help the Federal Bureau of Investigation fight crime, the Federal prosecutors prosecute criminals, and the Federal prison system accommodate those convicted of crimes.

To make such investments possible, the budget includes recommendations to terminate or reduce Federal investment in certain low-return programs, and proposes reforms to slow the continuing growth of mandatory entitlement programs and to increase fairness in the distribution of the benefits these programs provide.

In addition, the budget contains a new proposal to fund various programs now carried out by the States through a comprehensive block grant. The States are continuing to develop new and innovative ways to deliver services more effectively. The budget not only highlights several of these innovations; it proposes to reinforce and build upon them.

The budget contains several proposals that reflect my commitment to managing government better. These include measures to improve accountability, to reduce waste, to reform regulation, to employ risk management budgeting in addressing threats to health and safety, and to set clear objectives and measure performance in meeting them.

Finally, consistent with the statutory caps enacted last year, the budget provides the resources necessary to maintain national security, and to better advance American interests abroad. As the budget goes to press, the timing of the resolution of the multinational coalition's efforts to reverse the aggression in the Persian Gulf is uncertain. For this reason, the budget reflects only a placeholder for Operation Desert Shield. A supplemental request for the incremental costs of Desert Shield, which includes Desert Storm, will be forwarded to the Congress in the coming weeks.

The priority investments embodied in this budget will help America prepare for the requirements and opportunities presented by a rapidly changing world. I look forward to working with the Congress in developing a budget that lays the groundwork for a brighter future, protects our national interests, and helps create the conditions for long-term economic growth and prosperity.

GEORGE BUSH

FEBRUARY 4, 1991

II. DIRECTOR'S INTRODUCTION AND OVERVIEW TABLES

II. DIRECTOR'S INTRODUCTION AND OVERVIEW TABLES

A SOMBER MOMENT—BUT WITH HOPE FOR A NEW ORDER

Last year's budget was published in an historical context that bordered on the euphoric. Its introduction noted:

> State-centered, command-and-control systems seem to be decomposing.... Liberated celebrants have cheered the opening of the Berlin wall and the decline of communist dictators. So too have liberated Panamanians celebrated the fall of the dictator in near-by Panama....
>
> This is not small stuff. It is another giant leap of the human spirit yearning to breathe free.

The introduction, then, went on to lament:

> Yet this great historical shift has been almost trivialized in its translation into public debate about the budget. The issue has been framed as: "How big is the 'peace dividend'?"—and, in effect, "How can I get mine?"

This year's budget goes to press at a more somber moment, when the fragility of peace has again been made painfully evident. In August, a militaristic dictator brutally invaded a peaceful neighbor. He refused to conform to international norms established by the United Nations. He destabilized a region that is vital to the global economy—a region which, for too long, has been the victim of conflict.

As a result, suffering has increased within the region and throughout the world. Innocent people have been hurt. Economies have weakened. Allied military action has been undertaken as a last resort to enforce the resolutions of the United Nations. The early action has gone well. But precious lives have been lost. The poignant human costs of protecting freedom and the civilized rule of law have again been made clear.

Yet, although the moment is somber, there is cause for hope.

The liberation of Kuwait has begun. But of more far-reaching significance is this: With U.S. leadership, the global response to the Iraqi invasion has the potential to set a favorable precedent for the post-Cold-War era—what the President has termed a New World Order.

At home, the Iraqi invasion of Kuwait has caused obvious economic difficulties. Oil prices were driven up for several months. Long-term interest rates reflected a risk premium. In the face of uncertainty, consumers and investors have understandably held back. The resulting economic slow-down has taken its toll. And the problem of the fiscal deficit has thus been compounded by the effects of the crisis in the Gulf.

Yet in this somber domestic picture, too, there is cause for hope. The move toward satisfactory resolution of the Gulf crisis is unequivocally positive for the domestic economy. And the residual fiscal crisis, though regrettable, has the potential to foster—even to accelerate—domestic reform. Within the framework of the 1990 Budget Agreement, constructive reforms can be framed. Though less grand than a New World Order, steps toward a new domestic order can continue to be advanced—at least at the margin of practicable change.

It is in this spirit that the new budget is presented.

This introduction:

- reviews the deficit outlook;
- outlines a reform agenda; and
- discusses the need for a new conception of "program life cycles"—within the framework of the 1990 Budget Act.

THE DEFICIT OUTLOOK— WORSE BEFORE BETTER

The new budget is for fiscal years 1992 and beyond. For each of these years, the consolidated deficit estimate promises to be better than the year before. The projected deficit goes down by $37 billion from 1991 to 1992. It reaches balance by 1996. (See Table II–1.) As a percent of GNP, it declines from 5.7 percent (near the recent high of 6.3 percent in 1983) to roughly 1 percent in the mid-1990s. The *longer-term* trend is favorable by several different measures of "the deficit." (See Chart II–1). But the inescapable reality of the *near term* is: the deficit outlook is not good.

The consolidated deficit for the current fiscal year, 1991, is estimated at $318 billion. This includes $30 billion in budget authority and $8 billion in outlays (net of foreign contributions) as a placeholder for the incremental costs of Operation Desert Shield. This does not fully cover the additional costs of actual combat, however. With substantial foreign contributions, the adverse financial effects on the United States should be mitigated. But neither full costs not total contributions can be reliably estimated as the budget goes to press.

Even without the full net costs of Desert Shield (which includes Desert Storm), this

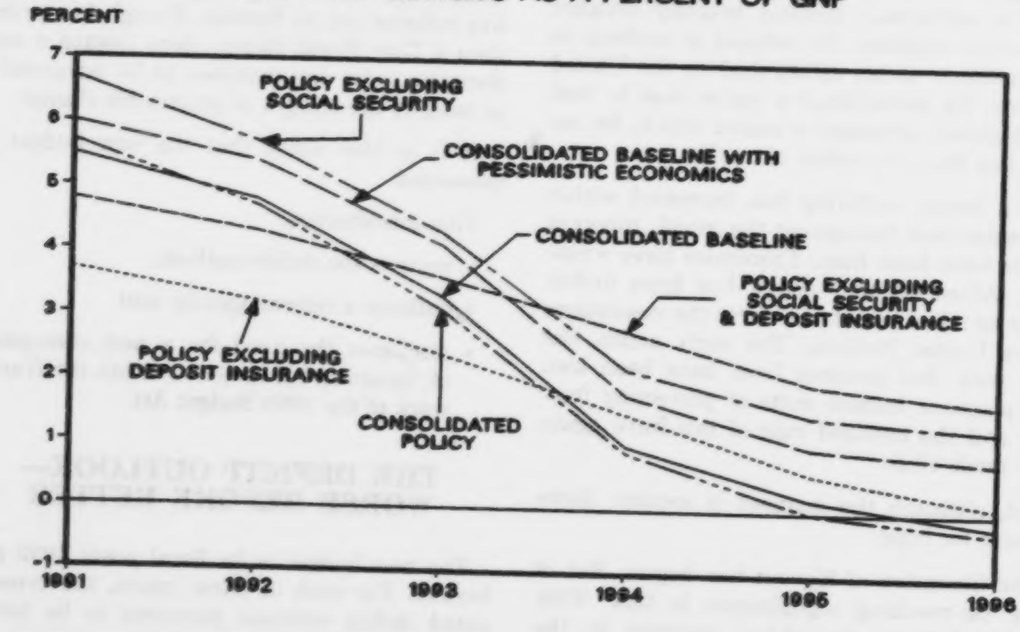
Chart II-1. DEFICITS AS A PERCENT OF GNP



1991 deficit estimate represents a substantial deterioration relative to the 1990 deficit of $220 billion. It is worse than was estimated last summer, by both the Administration and the Congressional Budget Office, during the Budget Summit negotiations. And it is far worse than the baseline deficit estimated a year ago.

The two largest elements of this deterioration for 1991—each far greater than all others combined—are:

- an increase of $105.5 billion in estimated outlays for thrift and bank insurance (part of which is due to a change in accounting treatment); and
- a decrease of $87 billion in estimated receipts (principally due to a weaker economy).

The longest period of peacetime economic growth has been interrupted. Revised economic assumptions now reflect two consecutive quarters of negative real growth—the fourth quarter of calendar year 1990 and the first quarter of calendar year 1991. (See Table III–1)

This temporary economic downturn was not assumed last year by the Administration or by most outside economists. Indeed, it was not the result of ordinary causes. It did not start as a turn of the "business cycle." Inventories were relatively low. And it was not a correction for "overheating."

Among the principal causes of the weaker economy were a combination of the following:

- *monetary policy*, which for an extended period (roughly two years) remained on the tighter side of its target range—not seeking to halt real growth, but slowing growth out of concern for inflation and dollar weakness;
- the *"credit crunch"*—as the banking system (both banks and regulators) struggled to react to the S&L experience, new capital requirements, problems in the real estate market, and fears of a more general slowdown; and,
- perhaps most significantly, the multiple adverse economic and psychological effects of the *crisis in the Gulf* (as noted above).

The return to healthy economic growth—and the associated improvement in the deficit—assumes, and probably requires:

- improvement in all three areas—the Gulf, the financial system, and monetary policy;
- adoption of the growth-oriented policies noted in the President's Message and discussed further below; and
- full implementation of the 1990 Budget Agreement—which reduces the previous baseline deficit by $72.9 billion for 1992 and $138.1 billion for 1995.

As always, there is a risk that these are excessively hopeful assumptions. But with the new Budget Agreement, the risk is arguably lower than in previous years.

Prior to enactment of the Agreement's procedural reforms, there were incentives for the Administration to err in the direction of rosy projections. There were related incentives for the Congress first to criticize these projections (visibly) and then to adopt the same projections (invisibly). Now, these perverse incentives have been reduced.

For this and other reasons, the Administration's projections are closer to mainstream thinking. The calendar year 1991 real growth forecast is almost identical to the current consensus forecast of the "Blue Chip" economic experts, and is actually below that of the Congressional Budget Office (CBO). The long-term growth forecast, although higher than that of CBO, is nonetheless below America's post-World-War-II average. Thus, the deficit outlook presented here may be judged to be more credible than in the past.

Unfortunately, however, this does not necessarily mean that it is correct. Even in the best of times, macroeconomics is a highly fallible "science." (Macroeconomists are often closer to each other than to reality.) And as this budget goes to press, there are crucial unknowns: the timing and character of events necessary to resolve the crisis in the Gulf. These are fundamentally relevant uncertainties. Much will turn on them.

So Chapter III, "Economic Assumptions and Sensitivities," bears special attention. It discusses the extent to which the deficit outlook should be modified if one wishes to use different economic assumptions.

REFORMIST STEPS—TOWARD A NEW DOMESTIC ORDER

Whatever one's economic assumptions, America nonetheless can—and must—continue its historic mission: protecting freedom, accelerating innovation, assuring fairness, increasing growth and opportunity, while limiting the expansion of intrusive and inefficient government. The President's 1992 budget limits the growth of Federal spending to 2.6 percent—less than the inflation rate. Within this limit, it nonetheless helps advance the process of American renewal. The budget proposes reform measures in each of the following domestic areas:

(1) Education Reform

The United States spends more per student on education than almost every other country on earth. Yet, the average performance of American elementary and secondary school students on internationally administered tests is disgracefully low. The performance is below that of America's major trading partners. It falls consistently near the bottom. The current system unnecessarily holds young people back, holds workers back, and holds the Nation back. Clearly, more of the same cannot be acceptable.

In coordination with the Nation's Governors, the President has initiated an ambitious national reform effort. Consistent with that reform effort, the budget gives special emphasis to increased investment in child care (including almost $10 billion in tax credits and $732 million for the new child care block grant), Head Start ($2.1 billion), compensatory education ($6.4 billion), mathematics and science education ($1.9 billion), and the measurement of results.

To accelerate the more basic reforms that are necessary, the budget provides $690 million for a new Educational Excellence Act. And, perhaps most importantly, it encourages increased parental choice through: demonstration grants, greater flexibility for States, an information clearinghouse, and a new incentive fund for States and localities that adopt choice-oriented certificate programs. Greater choice would help foster a more market-like system and hold schools more accountable for performance. It is only with performance-based choice that more fundamental reform is likely to be achieved. (See Chapters IV.A. and V.A.)

(2) Research and Development

America's long-term position internationally and the potential for improvement in life at home depend fundamentally upon investment in a strong R&D base. Unfortunately, short-term claims and pressures often tend to drive out long-term investment. R&D is especially vulnerable in both the public and private sectors. Since the 1960s, investment in civilian R&D, particularly, has experienced a troublesome decline as a percent of GNP. To counter these tendencies, the President's budgets have sought to protect and increase R&D investment—without having the government cross the line into the problematic area of "industrial policy."

This budget proposes to make the R&D tax credit permanent in order to encourage more private R&D; while it also increases the direct Federal investment to $76 billion for 1992—up $8.4 billion to the highest level ever. Basic research would increase to $13 billion, with pathbreaking efforts that range from high-energy physics to what promises to be one of the most important and far-reaching research projects in human history: the Human Genome Project. In applied civilian R&D, exciting investments range from materials processing, to biotechnology, to high-speed rail transport and electric battery technology, to high performance computing. This investment in R&D unquestionably has the potential—in time—to bring radical improvement in the quality of human life across-the-board. (See Table II–2 and Chapter IV.C.)

(3) Financial Sector Reform

The S&L crisis was a central focus of reform last year. This year, public attention has begun to shift to the risks associated with banks. While the analogy with S&Ls is not appropriate, there unquestionably are risks. From a budgetary perspective, they are reflected in the baseline projection for the Bank Insurance Fund. In the absence of remedial

Expanding the Human Frontier through Biotechnology	3,788	4,107	+319	+8

legislative action, the Fund balance would turn negative in 1992. (See Chapter VIII.A.)

But the issues involved are far broader than merely the accounting status of the Bank Insurance Fund. Financial markets have become global. So has competition in financial services. Technological advances have changed both the character of services and of service-providers. Yet, the legal and regulatory framework attempting to govern the American financial service sector has not adapted. It is outdated—as will be many American competitors if the framework is not modernized.

With this problem in clear view, the President is proposing a comprehensive reform of both deposit insurance and the legal-regulatory framework governing the financial services sector. (See associated Treasury study.)

(4) Incentives for Saving and Investment

In the past decade, significant tax bills have been enacted at the rate of almost one per year—including historic tax reform. On balance, the tax system has been radically improved. As a general matter, both the tax system and the taxpayer deserve a rest. Still, there is one area that continues to merit further reform: the need to strengthen incentives for saving and long-term investment.

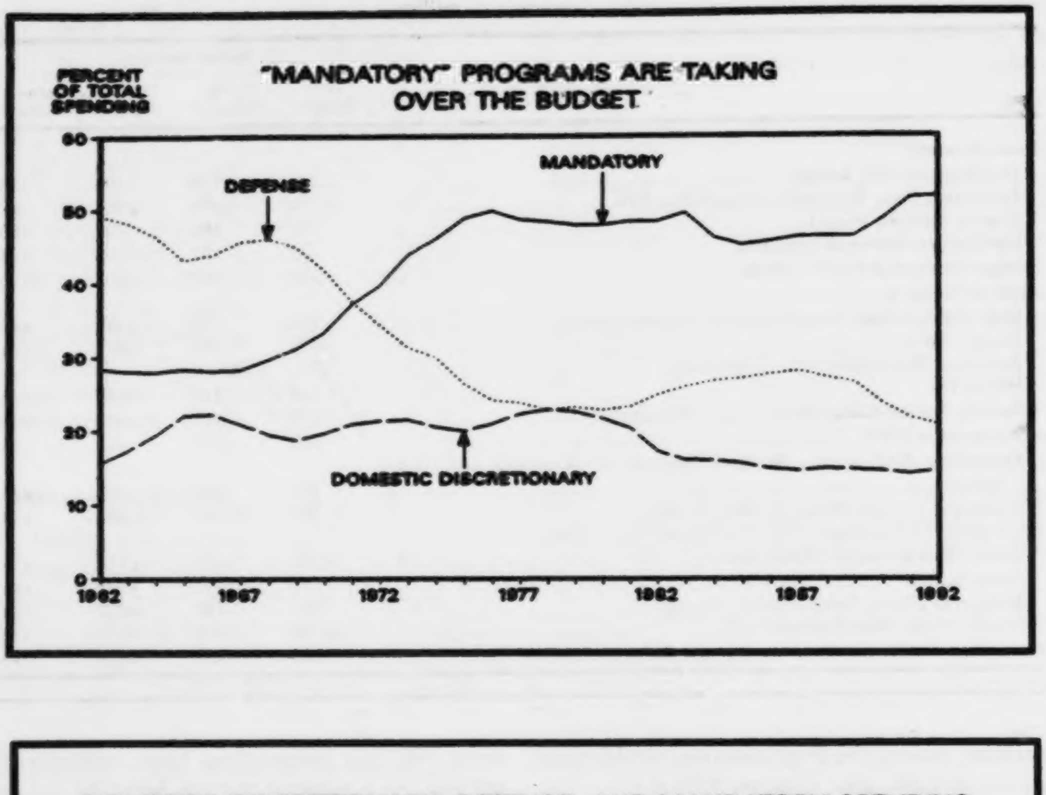
Accordingly, the President's budget proposes incentives to encourage: family savings, homeownership, longer-term investment, and investment in Enterprize Zones. (See Chapter X and the related discussion of pay-as-you-go requirements in Chapter XIV.)

(5) "Entitlement" Reform

In looking at the changing composition of the Federal budget since the 1960s, two trends stand out:

- First, the budget is being taken over by so-called "mandatory" or "entitlement " programs. These are largely transfer payments, which are not now subject to annual appropriation. They have grown from 28 percent of the budget in President Ken-

Chart II-2.



"MANDATORY" PROGRAMS ARE TAKING OVER THE BUDGET

DOMESTIC DISCRETIONARY, DEFENSE, AND MANDATORY SPENDING (Outlays) nedy's administration to nearly 52 percent today. (See Chart II–2).

- Second, within the "mandatory" total, funding for the non-poor has increased far more than for the poor. (See Chart II–3.)

No serious effort to address the deficit can ignore the 52 percent of the budget comprised by "mandatory" programs. That is why the 1990 Budget Act included measures to reduce the growth of "mandatories" by $100 billion over five years. But that is still not enough.

Accordingly, this budget proposes to reduce "mandatories" by another $47 billion over five years. (See Table II–9.) In addition, the budget reflects an important new emphasis for reform: increasing fairness in the distribution of benefits, reducing subsidies for those who do not need them.

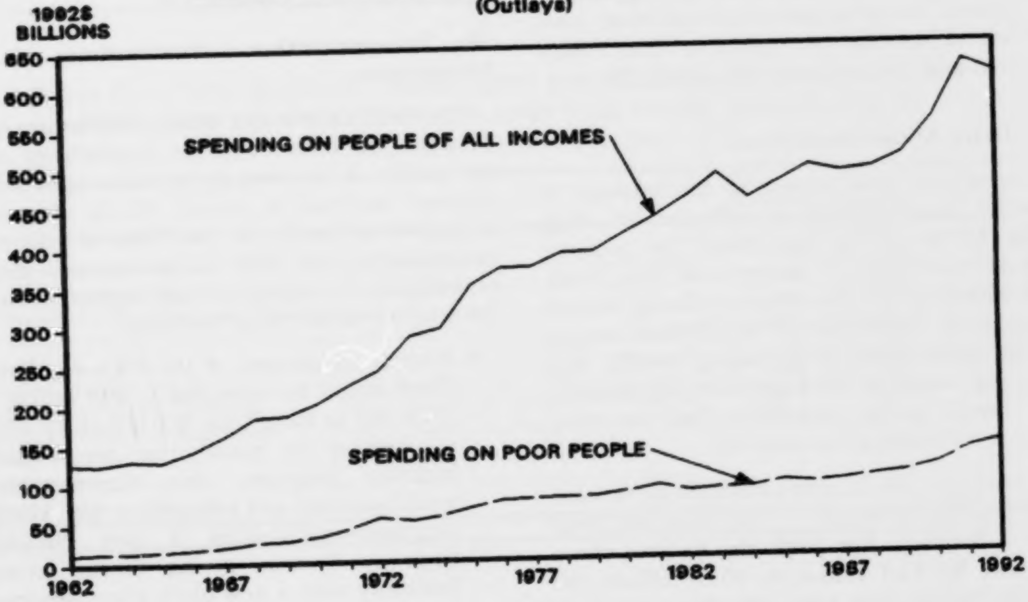
In particular the budget proposes to: reduce the subsidy of Medicare "Part B" premiums for individuals with annual incomes over $125,000; restructure higher education assistance to serve the needy better; reallocate school lunch subsidies to increase benefits for those with greater need; standardize benefits to increase payments to survivors of lower-ranking military personnel; and limit farm subsidies for individuals with non-farm income over $125,000. (See Chapter V.C.)

(6) Health System Reform

Although the American health system leads the world in research and in many specialized areas, its general performance is not yet satisfactory. Its costs continue to grow faster than both inflation and the economy. Total national expenditures on health now claim 13.5 percent of GNP. Federal health spending is over 15 percent of the budget. This enormous and rising claim on resources comes at the expense of what might otherwise be the expansion of services for those who do not have fair or adequate access to the health system. And notwithstanding the huge expenditures, indicators such as infant mortality and preventable death and disease remain unnecessarily high.

The American health system is a hybrid—partly government-managed, partly private, partly in-between; partly a model of excellence,

Chart II-3. MANDATORY SPENDING BY INCOME
(Outlays)



and partly a disgrace. The challenge of reform is complex. Comprehensive reform plans abound. But none is a certain remedy, and some threaten to cause as many problems as they would cure. None is likely to be implemented quickly.

For the coming year, the Administration will continue to advance reform in manageable steps—implementing last year's expansion of access to Medicaid and the reform of Medicare's physician payment system, while also accelerating reform in two new areas:

- *Malpractice reform.* The budget proposes new Federal financial incentives for States to adopt model malpractice reform measures. This can help reduce both the direct costs of malpractice insurance and the indirect costs of "defensive medicine"—while expanding the availability of medical services and increasing attention to appropriate standards of care.
- *Investment in Prevention.* The budget proposes to fund a concerted effort—through both education and increased investment in preventive services—to stop avoidable health problems before they start. In doing so, it gives special emphasis to programs affecting children—and to prenatal care, infant nutrition, cancer screening, injury control, smoking cessation and other matters of personal responsibility. (See Tables II–3 and II–4, and see Chapter IV.B.)

(7) Drug Abuse Reduction

One of the most troubling breakdowns of personal responsibility is reflected in drug abuse. In the 1970s and 1980s, the problem grew to near-epidemic proportions. The President advanced the first National Drug Control Strategy in September 1989. Several recent studies have shown encouraging results. Cocaine use seems to have declined significantly from levels in the mid-1980s. But the drug abuse problem is far from solved.

Accordingly, the budget continues to increase the resources allocated to the National Drug Control Strategy. For 1992, the Federal share increases by $1.1 billion to $11.7 billion (80 percent higher than when the President took office). The increase in these resources is distributed to all elements of the Strategy. (See Chapter V.B.)

(8) Housing Reform

American public policy reflects a long-standing commitment to the importance of investment in housing. But the results have been mixed—and clearly unsatisfactory for many of the poorest Americans. Part of the problem has been conceptual: too great an emphasis on direct governmental ownership and management; too little emphasis on opportunities for poor people to benefit from choice and homeownership.

The budget reflects a reformist shift in concepts: It proposes to fund fully ($2.1 billion in 1992) the new HOPE program—creating opportunities for tenant management and ownership. It requests a 38 percent increase in vouchers for low income people—to increase their power in the marketplace. And, on the tax side: it would permit the use of Individual Retirement Accounts by young families and first-time homebuyers; and it would offer special incentives for investment in Enterprise Zones—a refundable tax credit for wages, expensing of investor purchases of new corporate stock, and a zero capital gains rate for investment in tangible property within Enterprise Zones. (See Chapter V.A.)

(9) Transportation Infrastructure Investment

The Nation's transportation systems are fundamental to both economic productivity and the quality of life. And the stresses upon these systems continue to mount. While attending to important limits on the Federal role and responsibility, the 1992 budget makes a major contribution to expansion and improvement of the transportation infrastructure:

- Annual obligations of the Highway Trust Fund would be increased to $16 billion in 1992 and to more than $20 billion by 1996. In seeking to reauthorize the Federal highway program, the Administration would simplify and strengthen the existing program—establishing a new National Highway System, giving States greater flexibility with a new block grant program, and allowing more innovative financing with private participation. In addition, the

Substance Abuse Prevention	1,442	1,515	+5.1

Table II–5. **SELECTIONS FROM THE REFORM AGENDA—WITHIN THE FLEXIBLE FREEZE FRAMEWORK**[1]

Area	Highlights
(1) Education Reform:	• Long-term national goals—with Governors • Special funding emphasis on early childhood ($87 billion) • Parental choice—new incentive fund ($200 million) • Educational Excellence Act ($690 million) • Higher education funding reform • Math/Science improvement program ($1.9 billion)
(2) Research and Development:	• Record level for R&D ($76 billion) • Record level for basic research ($13 billion) • Human Genome Project • Increased emphasis on applied civilian R&D (*e.g.*, materials processing, biotechnology, high-performance computing)
(3) Financial Sector Reform:	• Deposit insurance reform • Recapitalization of Bank Insurance Fund • Comprehensive reform of legal and regulatory structure to modernize financial services sector
(4) Incentives for Saving and Investment:	• Enterprise Zones • Family Savings Account • IRA withdrawal for first-home buyers • Capital gains modification for longer-term investment
(5) Entitlement Reform:	• $47 billion savings over 5 years • Increased fairness/reduced subsidies for wealthy
(6) Health System Reform:	• Physician payment reform • Malpractice reform • Increased investment in prevention (prenatal care, infant nutrition, cancer screening, education for personal responsibility, child care)
(7) Drug Abuse Reduction:	• National Drug Control Strategy • $1.1 billion increase—to record $11.7 billion (Federal share)
(8) Housing Reform:	• Full funding for HOPE ($2.1 billion in 1992) • 38 percent increase in vouchers • IRA withdrawal for first-home buyers • Enterprise Zones (refundable wage credit, expensing for new stock, zero capital gains rate)
(9) Transportation Infrastructure Investment:	• New highway program (new National Highway System and new block grant) • Major increase in Highway Trust Fund obligations (over $20 billion by 1996) • NASPLAN modernization • Space transportation systems (Shuttle, ASRM, ALS, NASP)
(10) Government Management Reform:	• Budget process reform • Regulatory reform • Accounting systems reform • High-Risk Area targeting • Terminations: 238 programs and 3,591 projects
(11) "States as Laboratories":	• Demonstrations and waivers • Evaluation of natural experiments • $15 billion program turn-over to States (fully funded)

[1] Proposed total governmental spending for 1992 is 2.6 percent greater than 1991 (*i.e.*, growth is less than the inflation rate).

budget proposes funding for major technological advances in high-speed rail and "smart cars/smart highways," which could help relieve the stress on the current system. (See Chapter IV.D.)

- The budget would continue to modernize the national airspace system ("NAS-PLAN")—increasing funding for Federal Aviation Administration facilities, equipment, and systems by 29 percent, to $2.7 billion.
- Within the budget for space exploration and development, there is funding for the space shuttle, a new advanced solid rocket motor (ASRM), a new advanced launch system (ALS), and a national aerospace plane (NASP). As the use of space becomes increasingly relevant, these essential elements of the space transportation system should be better understood—and funded—as a vital part of America's infrastructure investment. (See Chapter IV.C.)

(10) Governmental Management Reform

Any 1.4 trillion-dollar-per-year enterprise (*e.g.*, the Federal Government) is bound to show signs of failure in one place or another. But the public is demanding; and respect for governmental performance remains understandably low. There is much room for management improvement.

Discontent with government is often visible (and deemed to be newsworthy). The less glamorous issues of management improvement typically are not. Nonetheless, management reform continues to be advanced:

- *Budget process reform.* The Administration is implementing the important and valuable reforms of the 1990 Budget Agreement—enforceable spending caps, "pay-as-you-go," and credit reform. Beyond these, the Administration continues to seek the line-item veto, joint (not concurrent) budget resolutions, biennial budgeting, and a balanced budget Constitutional amendment. (See Chapter IX.D.)
- *Regulatory reform.* The principles of regulatory reform continue to be advanced through the President's Competitiveness Council and the Office of Information and Regulatory Affairs—and through broader application of Risk Management Budgeting. (See Chapter IX.C.)
- *Accounting reform and oversight.* The budget continues to expand its analysis and presentation of "Hidden Liabilities." (See Chapter VIII.) The Administration is implementing the new Chief Financial Officers legislation—improving accounting standards, financial reporting systems, and audits. The budget explicitly identifies High-Risk Areas of vulnerability to fraud, waste, and abuse. And, as appropriate, the Administration is engaging special teams in the effort to reduce these vulnerabilities. (See Chapter IX.A.)
- *Reducing waste and improving returns on investment.* This is not only a problem of accountancy and oversight, as suggested above. It is also a problem requiring greater program evaluation and a willingness to terminate outdated or ineffective programs and projects. (See Chapter IX.B.) The problem, however, goes beyond conventional matters of accounting and evaluation—as discussed further below.

PROGRAM LIFE-CYCLES—AND STATES AS LABORATORIES

Clearly, the government has a need and a responsibility to improve the return on investment of Federal dollars. And improved accounting, analysis, and evaluation have an important role to play in this effort. But beyond these rather technical issues, there are larger structural issues that also require attention.

Fortunately, the 1990 Budget Act creates a framework that can encourage a more basic reform perspective.

The discussion of Entitlement Reform (above) has highlighted the budgetary "takeover" by mandatory programs—and the tendency of such programs increasingly to benefit the non-poor. The pay-as-you-go reforms may serve not only to restrain the further expansion of "mandatories." They should also encourage greater anti-poverty efficiency in the design of such programs.

With respect to discretionary programs, the effect of budget process reforms may be an even more direct increase in attention to program efficiency, effectiveness, and return on investment. This should be a natural outgrowth of the existence of fixed, enforceable caps on discretionary spending. With unequivocal limits on available resources, competition on the merits should increase.

As one begins to think about returns on investment, it is perhaps interesting to consider how much Federal spending might be considered "investment" at all. This question involves highly arguable definitional issues.

If one puts defense aside, and looks at how much nondefense spending is oriented toward longer-term investment (returns accruing over a period greater than five years), one finds that expenditures for short-term benefits clearly dominate. Long-term investments have been declining as a percent of GNP. (See Chart II–4.) This is, in part, a reflection of the budgetary "takeover" by transfer payments to individuals ("mandatories").

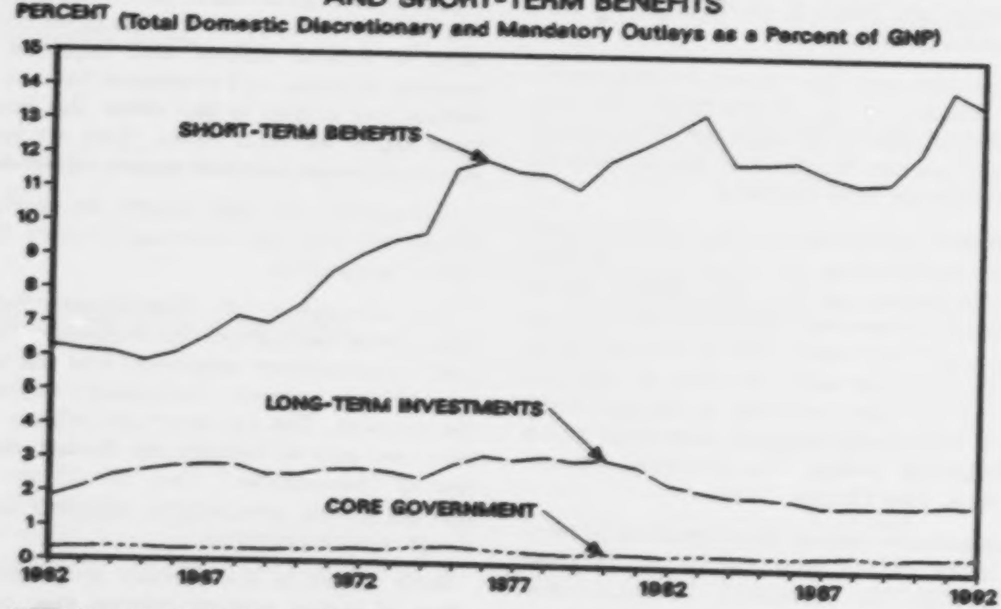
But even if one focuses only on domestic discretionary programs (*i.e.*, excluding mandatories), one finds that longer-term investments have been decreasing as a share of domestic discretionary spending. (See Chart II–5.) The President's budget seeks to correct this trend by increasing investment in R&D, prevention, early childhood, and transportation infrastructure—areas with higher return.

The expectation of a possible shift toward investment in programs with higher return may, of course, prove to be no more than a request and a hope. The existing domestic discretionary program structure has, to date, proven to be rather rigid. Reform will require a new flexibility and a new dynamic.

In the past, domestic discretionary programs often came into existence to address one alleged "urgent priority" or another. The urgency may have derived from a transitory emergency, a desire for "demonstration," or a perceived need for Federal leadership in areas where States and localities were slow to recognize or accept responsibility. As an abstract matter, this rationale may have been legitimate.

Chart II–4. CORE GOVERNMENT, LONG-TERM INVESTMENTS, AND SHORT-TERM BENEFITS

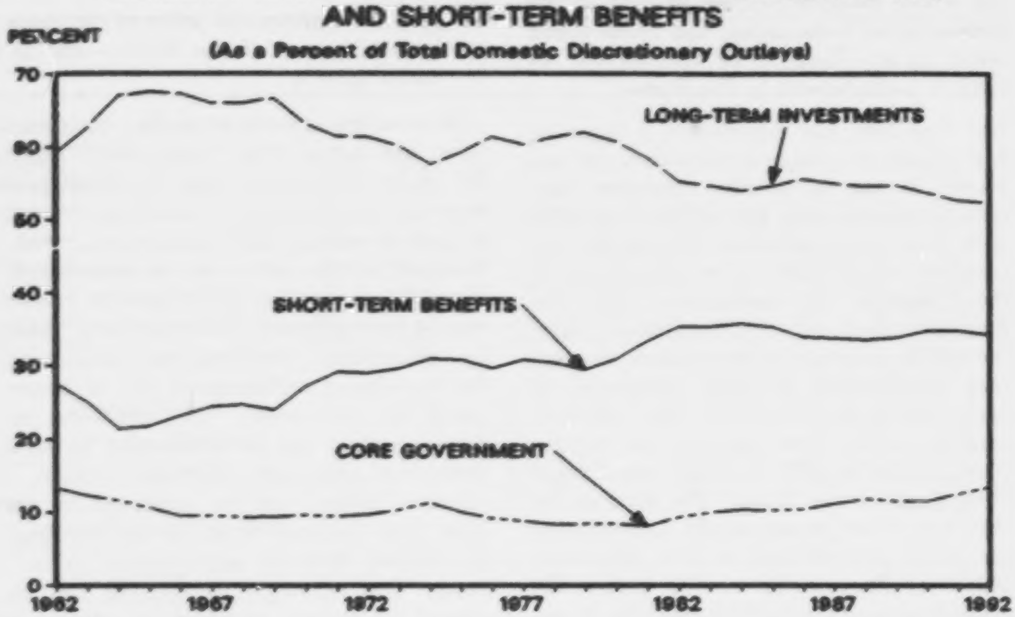
(Total Domestic Discretionary and Mandatory Outlays as a Percent of GNP)



NOTE: Long-term investments and short-term benefits include spending on both people and physical investments.

Chart II-5. CORE GOVERNMENT, LONG-TERM INVESTMENTS, AND SHORT-TERM BENEFITS

(As a Percent of Total Domestic Discretionary Outlays)



NOTE: Long-term investments and short-term benefits include spending on both people and physical investments.

Once in existence, however, programs have tended to become fixtures in the budget. There is, in practice, little evidence of a program lifecycle—other than a move toward immortality.

In a world of fixed spending caps, there will be no room for emerging priorities if the programs-of-old remain immortal. To allow adaptation to shifting priorities, there will have to be a more dynamic concept of program lifecycles:

- Some programs and projects will have to die. This should be the case, for example, when a program (whether demonstration or not) has proven a failure, or when the urgency of a past priority has been overtaken by events. It should also be the case when a demonstration has proven a success and is, therefore, available for replication and funding through other sources. In applying these principles, this *budget proposes the outright termination of 238 specific domestic discretionary programs and 3,591 specific projects.* These terminations would save $4.6 billion in budget authority in 1992. (See Chapter IX.B.)
- Some programs should decline. This should be the case when their relative priority is judged to have decreased. This budget proposes *declines of $8.3 billion in budget authority from an additional 109 domestic discretionary programs.* These programs were funded at a total of $27.4 billion in 1991. Reasons for proposed reductions are presented in Chapter IX.B.
- Some programs should increase. The reductions and terminations noted above help finance program increases in areas judged to merit higher priority or improved return on investment. *250 domestic discretionary programs are specifically recommended for increases totaling $17.8 billion.* (See Table B–6 in Chapter IX.B and the associated detail in Chapter XIII.)
- Some programs should be consolidated and turned over to the States—funded in more flexible form. Programs appropriate for such turnover may be selected from two

broad categories: those whose purposes are judged by States to be of continuing value, but whose relative funding priority at the Federal level is declining; and those which seem, in any case, to be appropriate for flexible management by the States.

The President has established a target of $15 billion in program turnovers for the States. A list of possible turnover candidates totaling over $20 billion is at Table II–9. The actual selection of programs for turnover would have to be authorized by the Congress—in consultation with the Administration and the Governors. (After the actual selection is determined, the current distribution of such programs by State would be calculated. The Administration would then propose to replace these programs with a single consolidated block grant to the States. The formula for this new block grant would approximate the same distribution to the individual States as they would receive under the present program structure—seeking to assure that no State would be harmed by the move to a new, consolidated block grant.)

The value of this turn-over approach is as follows. It allows the Federal Government to reduce overhead. It allows States to manage a pool of financial resources more flexibly. It moves power and decisionmaking closer to the people. And it reenforces another reformist theme of this Administration: appreciation and encouragement of "States as Laboratories."

This last point is especially important. The American Federal system has within it an enormous power for innovation: the natural variation and experimentation among the States. For too long, this potential has been under-appreciated at the Federal level. Nonetheless, the reality is that some of the most interesting examples of innovation are being set by the States—in areas ranging from educational choice, to enterprise zones, to health cost control, welfare reform, and transportation finance. (See Chapter VI.)

The Administration seeks to reenforce this natural power of the States—and to help build upon it.

In sum, the opportunities for constructive reform are many. (See Table II–5.) Incentives for choice, innovation, and improved performance can be advanced in education. Investment in path-breaking R&D can be increased. The financial service sector can be modernized. Tax incentives for saving and long-term investment can be strengthened. The budgetary "takeover" by "mandatory" programs can be slowed; and the benefits of entitlements can be better targeted for the needy. The problems of the health system can be alleviataed, to some degree, by physician payment reform, malpractice reform, and an emphasis on prevention. The National Drug Control Strategy can be carried forward aggressively to its next stage. The approach to housing can be improved by greater emphasis on choice, homeownership, and Enterprise Zones. Stresses on the transportation infrastructure can be relieved. And the government itself can be managed better—through budget process reform, accounting reform, program evaluation, regulatory reform, and reenforcement of the innovative power of "States as laboratories."

These reforms can all be accommodated within the "flexible freeze" (with total spending growing at less than the inflation rate) and within the limits of the 1990 Budget Act.

If these reform measures are adopted—and assuming satisfactory resolution of the Gulf crisis in the not-too-distant future—the economy can not only return to economic growth. It can move on toward a new record for economic expansion as America advances to the 21st century.

[1] The proposal to enhance long-term investment is shown as estimated by the Treasury Department's Office of Tax Analysis (OTA). Because the methodological differences among OTA, Congressional estimators, and outside experts have not yet been resolved, totals are presented with the Administration's estimates and with a zero (neutral) entry for this proposal.

Table II–9. PROPOSED POLICY CHANGES IN MANDATORY PROGRAMS

(Outlays; in millions of dollars)

	1992	1993	1994	1995	1996
Department of Agriculture					
Commodity Credit Corporation: reduce subsidies to those with off-farm income over $125,000	–36	–90	–90	–90	–90
Crop Insurance: increase farmer responsibility for premium payments	–77	–167	–164	–152	–146
Food Safety and Inspection Service: seek reimbursement from industries for certain overtime activities	–50	–50	–50	–50	–50
Food Stamps: effect of increased child support enforcement	—	–10	–20	–30	–34
Miscellaneous User Fees: increase fees for recreation and grain inspection and establish fees for agricultural marketing	–29	–32	–32	–33	–34
Rural Electrification Administration: continue shift from direct to guaranteed loans	–13	–38	–59	–74	–67
Department of Education					
Guaranteed Student Loans: net impact of reducing the number of loans that default by: improving eligibility screening of schools; enhancing procedures for default collection; requiring risk sharing and increasing loan limitations	–102	–173	–229	–282	–289
Department of Energy					
Elk Hills Naval Petroleum Reserve: lease production rights	–1,191	139	120	113	95
Power Marketing Administrations: revise the level and schedule of the PMAs' debt repayments to the Federal Government	–377	–382	–406	–417	–402
Strategic Petroleum Reserve: delay required purchase of petroleum until 1992 and 1993[1]	36	86	—	—	—
Department of Health and Human Services					
Family Support: improve the child support enforcement system	–120	–129	–142	–163	–179
Foster Care: limit the Federal Government's payment of administrative costs to only those required to provide benefits to low-income children	–210	–290	–352	–405	–452
Medicaid: net impact of allowing States to expand medically-needy eligibility for pregnant women and children; strengthening medical child support enforcement; and the impact of Medicare proposals	25	75	75	90	95
Medicare:					
Clinical Labs:					
Apply 2% update for 1992 and 1993, only for those below payment caps	–20	–50	–70	–80	–90
Restore 20% co-insurance, identical to all other Part B services	–450	–800	–900	–1,020	–1,160
Subtotal, clinical labs	–470	–850	–970	–1,100	–1,250
Coordinated Care Initiative: Begin a Medicare coordinated care initiative whose costs would be largely offset by: applying home health limits by discipline and establishing a uniform disabled/ESRD secondary payor threshold	–130	25	40	70	195

---

[1] The SPR proposal saves $123 million in outlays for 1991.

Table II–9. PROPOSED POLICY CHANGES IN MANDATORY PROGRAMS—Continued

(Outlays; in millions of dollars)

	1992	1993	1994	1995	1996
Durable Medical Equipment (DME):					
Adjust enteral/parenteral fee schedule	–10	–15	–15	–15	–15
Refine DME/oxygen payment methods, in part to reflect increased use of less-expensive oxygen delivery services	–35	–85	–105	–130	–135
Subtotal, medical equipment	–45	–100	–120	–145	–150
High-Income Beneficiaries: Reduce Federal Medicare subsidy for high-income beneficiaries (over $125,000 AGI)	–41	–169	–245	–323	–426
Hospitals:					
Adjust indirect medical education add-on payment factor from 7.65% to 4.4% in 1992, phasing down to 3.2% in 1996	–1,045	–1,385	–1,705	–2,080	–2,500
Eliminate duplicate payments for hospital-based nonphysician practitioners by adjusting hospital payment update factor	–10	–10	–10	–10	–10
Include payment for certain post-hospital services in Medicare hospital payment	–30	–40	–50	–50	–60
Limit graduate medical education per-resident payment, and encourage training of primary care physicians	–140	–160	–190	–230	–260
Place Medicare hospital update on a January 1 cycle	–670	–930	–1,320	–1,450	–1,540
Subtotal, hospitals	–1,895	–2,525	–3,275	–3,820	–4,370
Outpatient Departments (OPDs): Pay a uniform rate for outpatient services, whether performed in doctors' offices or OPDs	–50	–100	–125	–150	–175
Physicians:					
Eliminate double payment for physician collection of lab specimens	–10	–20	–20	–20	–25
Establish a single fee for anesthesia services	–80	–150	–170	–200	–230
Establish a single fee for assistants at surgery	–50	–80	–90	–100	–110
Revise 1991 Medicare volume performance standard to correct error	—	–90	–150	–190	–220
Revise Medicare economic index to reflect better data and new methodology	–30	—	—	—	—
Use efficient rate for radiology and diagnostic tests	—	–10	–15	–20	–20
Subtotal, physicians	–170	–350	–445	–530	–605
Other:					
Effect of Medicare proposals on HI premiums	17	20	26	30	33
Eliminate return-on-equity payments for proprietary skilled nursing facilities	–50	–70	–60	–60	–70
Establish a uniform payment policy for medicare covered drugs	–10	–30	–30	–40	–40
Recalculate payments for physical and respiratory therapy, based on newer data	–10	–10	–15	–15	–20
Subtotal, other	–53	–90	–79	–85	–97
Subtotal, Medicare	–2,854	–4,159	–5,219	–6,083	–6,878
Supplemental Security Income: collect SSI over-payments and charge States certain administrative fees	–96	–159	–250	–250	–240

III. ECONOMIC ASSUMPTIONS AND SENSITIVITIES

III. ECONOMIC ASSUMPTIONS AND SENSITIVITIES

INTRODUCTION

The economic expansion that began in November 1982—the longest peacetime period of continuous growth—has been interrupted. Iraq's invasion of Kuwait and the heightened uncertainties that ensued hurt consumer confidence and contributed to a curtailment of spending. That tipped the balance in the final months of the year from slow economic growth to contraction.

The current downturn is widely forecast to be shorter and shallower than the average postwar recession which lasted 11 months with a real GNP decrease of 2.6 percent. The more favorable outcome expected this time reflects the absence of cyclical imbalances and inflationary pressures. Energy conservation has made the economy much less vulnerable to oil shocks than it was in the 1970s. Barring a sustained surge in the price of oil, the economy should stabilize and turn toward recovery within the next few months.

RECENT DEVELOPMENTS

Real GNP, which grew at a 1.4 percent annual rate in the third quarter of 1990, declined in the fourth. The exact extent of the drop will not be known until this spring when final data for the quarter are available, but the decrease appears to have been substantial. Consumer spending, business fixed investment and housing construction fell, largely in response to the growing uneasiness about the future.

Businesses curtailed production and employment in order to avoid an unwanted buildup of inventories. Industrial production was reduced 2 percent from the third to the fourth quarter, with cutbacks widespread across industries. The Nation's payrolls were trimmed by 420,000 workers, about ½ percent. By December, the total unemployment rate reached 6.0 percent, 0.5 percentage point above the third quarter average, but was still low by historical standards.

An initial burst of inflation brought on by the surge in oil prices following the Iraqi invasion has given way to more moderate rises in recent months as oil prices have retreated. After increasing at a nearly 10 percent annual rate in August-September, the Consumer Price Index slowed to a 3.7 percent rate in November and December. Crude oil prices, which reached $40 per barrel at their height in October, fell below $30 early this year. Outside of the energy sector, inflation has been subdued recently.

Money growth decelerated sharply in 1990, with the M2 and M3 aggregates barely exceeding the lower limits of the Federal Reserve's target ranges. In the last 3 months of the year, both aggregates were virtually unchanged. M2 adjusted for inflation, often a leading indicator of economic activity, fell 3 percent from its peak in December 1989. To alleviate the decline in economic activity, the Federal Reserve lowered the Federal funds rate from 8¼ percent in July 1990 to around 6¾ percent at the beginning of this year. The discount rate was cut by ½ percentage point in December 1990.

The 3-month Treasury bill rate dropped about 1¼ percentage points from July to the beginning of 1991 to reach 6.5 percent. At the longer end of the maturity spectrum, the 10-year Treasury note rate declined only slightly over the period, primarily because of uncertainties related to tensions in the Persian Gulf. In early 1991, banks cut the prime rate ½ percentage point to 9.5 percent.

ECONOMIC ASSUMPTIONS

Short-Term Prospects.—The Administration's economic assumptions, developed jointly by the Council of Economic Advisers, the Treasury and the Office of Management and Budget, show a resumption of economic growth in the near future, with the pace accelerating into 1992. From the fourth quarter of 1990 to the fourth quarter of 1991, real GNP is

[1] CPI for urban wage earners and clerical workers. Two versions of the CPI are now published. The index shown here is that currently used, as required by law, in calculating automatic cost-of-living increases for indexed Federal programs.

[2] Percent of total labor force, including armed forces residing in the U.S.

[3] Average rate on new issues within period, on a bank discount basis. These projections assume, by convention, that interest rates decline with the rate of inflation.

[4] Based on data available as of mid-December 1990.

projected to rise only 0.9 percent, with most of the gain in the second half of the year. The slow growth is projected to push the total unemployment rate to the neighborhood of 6¾ percent for much of the year. Faster real growth of 3.6 percent during 1992 is expected to put the unemployment rate back on a downward path (Table III–1).

The assessment that the downturn will be mild and soon turn toward recovery is based on several factors. *First, the economy entered* *this period of weakness in relatively healthy condition.* Unlike previous cyclical peaks, it was not overheated last year: growth had already slowed to well below a sustainable pace, inflation and interest rates had not spiked, and business inventories remained in line with final sales. With few of the imbalances that typically arise at the end of an expansion, there is little need for a long period of decline while excesses are eliminated.

Second, the precipitous loss of consumer confidence since July was due to an external development, the Persian Gulf crisis, rather than internal weakness. Confidence can be restored quickly if it becomes evident that there will not be a replay of the previous oil shocks.

Third, a recovery in interest-sensitive sectors such as housing, consumer durables and business investment is likely as a consequence of the fall in interest rates in recent months. Moreover, economic activity will be supported by an improvement in the trade balance. The 12 percent depreciation of the dollar during 1990 has made domestically produced goods more competitive on world markets. In addition, faster growth abroad will further boost U.S. exports relative to imports.

Finally, the rate of inflation is likely to decline in 1991 and 1992, reflecting a return to pre-crisis oil prices, the weaker labor market, and greater excess capacity.

Table III–2 shows a range of estimates for economic variables related to saving, investment and foreign trade, as required by the Omnibus Trade and Competitiveness Act of 1988. The merchandise trade balance and current account are expected to improve considerably in 1992 due to the continuing favorable impact on the Nation's competitive position of the dollar's decline during 1990 and relatively faster growth abroad. As a result, net foreign investment in the United States will be reduced. Net domestic saving and net private domestic investment in 1992 are projected to be around the levels of 1990 as declines during the period of sluggish activity in 1991 are offset by subsequent increases as rapid growth resumes.

It is difficult to gauge the effect of Federal Government borrowing from the public on interest rates and exchange rates as required by the Act. Both are influenced by many factors besides Government borrowing in a complicated process involving supply and demand of credit and public perceptions of fiscal and monetary policy here and abroad. The proposals in this budget are not expected to exert a substantial independent influence on exchange rates.

Long-Term Assumptions.—Real GNP growth is assumed to be about 3 percent annually by 1995–1996, accompanied by gradual declines in inflation and interest rates. The growth projection is based on a slowing in the growth of the labor force, offset by faster growth of labor productivity. The civilian labor force is assumed to rise about 1.3 percent per year toward the end of the projection period, slightly less than its average of the last four years. Labor productivity is assumed to increase at an annual rate of 1.9 percent per year at that time, up from the 1.3 percent of the last expansion.

Table III–2. **SAVING, INVESTMENT, AND TRADE BALANCE**

(In billions of dollars)

	1990 actual	1992 estimate
Merchandise trade balance	–102	–75 to –95
Current account balance	–96	–65 to –85
Net foreign investment	–88	–60 to –80
Net domestic saving (excluding Federal saving)[1]	256	240 to 260
Net private domestic investment	185	180 to 200

[1] Defined for purposes of Public Law 100–418 as the sum of private saving and the surpluses of State and local governments. All series are based on National Income and Product Accounts except for the current account.

The productivity gain is predicated on the adoption of sound fiscal and monetary policies that foster a higher rate of capital formation.

THE BUDGET OUTLOOK UNDER ALTERNATIVE ASSUMPTIONS

Because there is considerable uncertainty surrounding any economic projection, it is useful to consider how the budget deficit would be affected if economic performance differed from the assumptions underlying the budget. Two such alternatives are examined in this section.

The "higher growth" alternative allows for the possibility that the economy will pass through the next six years without a significant downturn in economic activity. Following a one-quarter decline in real GNP in the fourth quarter of 1990, real economic growth resumes in 1991 at a faster pace than in the budget assumptions. Real GNP rises 1.3 percent over the four quarters of 1991 and 3.8 percent during 1992 (Table III–3). This alternative might occur with a quick rebound in consumer confidence and spending or a strong performance of U.S. exports in early 1991. GNP in this alternative is assumed to grow 3.2 percent per year in 1995–1996 compared with 3.0 percent in the budget. Inflation and interest rates are also assumed to be somewhat higher.

The 1992 deficit is $6.9 billion lower with the high growth path than in the budget; by 1996 the deficit is $30.3 billion less (Table III–4). The effect of faster economic growth and higher inflation on receipts outweighs the effect of higher inflation and interest rates on outlays.

In the "lower growth" alternative, the economy experiences a sharp and lengthy downturn in 1990–1991. The banking sector is assumed to be severely affected in this scenario, with a prolonged period of high losses and increasing insolvencies. This alternative might arise if confidence falls even further as the economy weakens. Economic growth following this recession is slower than in the budget, rising only 2.6 percent in 1996. Interest rates and inflation are somewhat lower in this alternative because of weaker demand.

The deficit is $40.4 billion higher in 1992 on the lower growth path. This includes an

Lower growth	6.2	5.7	5.5	5.3	5.2	5.1

[1] Annual average, percent.

Table III–4. BUDGET EFFECTS OF ALTERNATIVE ASSUMPTIONS

(Differences from budget; in billions of dollars)

	1991	1992	1993	1994	1995	1996
Higher growth:						
Receipts	3.3	10.7	20.3	30.6	42.4	54.9
Outlays	0.1	3.8	10.1	13.7	19.1	24.6
Deficit reduction (–)	–3.2	–6.9	–10.2	–16.9	–23.3	–30.3
Lower growth:						
Receipts	–13.4	–30.8	–40.2	–48.1	–57.8	–69.0
Outlays:						
BIF	10.6	8.6	8.3	8.5	1.5	–1.4
Other	1.5	1.0	0.5	0.6	2.2	3.8
Total outlays	12.1	9.6	8.8	9.1	3.7	2.4
Deficit increase (+)	25.5	40.4	49.0	57.2	61.5	71.4

$8.6 billion increase in the FDIC Bank Insurance Fund (BIF) outlays. A tentative estimate would put additional BIF outlays at $36 billion over the next 6 years. The deteriorating health of depository institutions is discussed in Chapter VIII.A., "Recognizing and Reducing Federal Underwriting Risks." By 1996, the deficit would be $71.4 billion higher in this lower growth alternative.

STRUCTURAL vs. CYCLICAL DEFICIT

The OBRA reforms succeeded in putting the structural deficit on a declining path. This improvement, however, has been obscured by temporary factors.

The downturn in the economy has raised unemployment and caused GNP to fall below its high employment level. The decline in economic activity has also caused the budget deficit to increase. Table III–5 divides the deficit into a cyclical component and a noncyclical structural component. On this calculation, cyclical factors account for $45 billion of the 1992 deficit, up from $5 billion in 1990.

Assuming that, by 1996, the total unemployment rate will have returned to 5.2 percent—its level in the second quarter of 1990—the cyclical portion of the deficit will be $2 billion, while the structural portion will be a $22 billion surplus. Although the cyclical deficit is virtually eliminated by 1996, the downturn has a lingering effect on the structural portion. Because of the additional debt incurred while the unemployment rate exceeds 5.2 percent, interest costs are permanently higher. These additional interest payments amount to $13

Table III–5. ADJUSTED STRUCTURAL DEFICIT

(In billions of dollars)

	1990	1991	1992	1993	1994	1995	1996
Consolidated surplus or deficit (–)	–220	–318	–281	–202	–62	–3	20
Cyclical component	5	37	45	34	22	11	2
Structural surplus or deficit (–)	–215	–281	–236	–168	–40	8	22
Deposit insurance outlays	58	111	88	44	–38	–42	–30
Adjusted structural deficit	–157	–170	–148	–124	–78	–34	–8

billion in 1996. Without them, the structural surplus would be $35 billion.

Outlays for deposit insurance of thrifts and banks, as well as the receipts from sales of assets of failed financial institutions, are "one-time only" transactions that will not be repeated once the problems of thrifts and banks are resolved. Moreover, the near-term outlays are partly balanced by future offsetting collections when the Government disposes of the assets it has acquired. The underlying deficit is not affected by such transactions. Removing deposit insurance from the deficit calculation reduces the 1992 deficit by $88 billion, and adds $30 billion to the 1996 deficit.

The consolidated deficit shows a large $61 billion increase between 1990 and 1992 and a very rapid improvement over the succeeding four years. *Subtracting both the cyclical component and deposit insurance from the consolidated deficit yields an adjusted structural deficit that declines gradually between 1991 and 1996.*

IMPACT OF ECONOMIC CHANGES ON THE DEFICIT

Recent economic developments and changes in the economic assumptions from the 1991 budget for 1991–1995 have a large negative impact on the deficit (Tables III–6 and III–7). On balance, changes from the 1991 budget assumptions are estimated to have raised the deficit by about $71 billion in 1991, and by $109 billion in 1995. Receipts are $49 billion lower in 1991 and $43 billion lower in 1995. The much weaker economy in 1991 keeps the level of real GNP in subsequent years below that assumed in last year's budget. Outlays are higher in all years as a result of increased costs for unemployment-sensitive programs and higher interest costs associated with higher interest rates and a larger outstanding Federal debt. The enlargement of the deficit is ameliorated somewhat by slightly higher inflation, which adds more to receipts than to outlays. Changes in policies and technical reestimates, including the increased cost to resolve thrift and bank insolvencies, are not included in these figures.

Table III–6. COMPARISON OF ECONOMIC ASSUMPTIONS IN THE 1991 AND 1992 BUDGETS

(Calendar years; dollar amounts in billions)

	1990	1991	1992	1993	1994	1995
Nominal GNP:						
1991 budget assumptions [1]	5,544	5,958	6,391	6,830	7,270	7,713
1992 budget assumptions	5,465	5,689	6,095	6,536	6,990	7,451
Real GNP (percent change):[2]						
1991 budget assumption	2.6	3.3	3.2	3.1	3.0	3.0
1992 budget assumptions	—	0.9	3.6	3.4	3.2	3.0
GNP deflator (percent change):[2]						
1991 budget assumption	4.2	4.1	3.8	3.5	3.2	2.9
1992 budget assumptions	4.5	4.3	3.8	3.6	3.5	3.4
Interest rate on 91-day Treasury bills (percent):						
1991 budget assumptions	6.7	5.4	5.3	5.0	4.7	4.4
1992 budget assumptions	7.5	6.4	6.0	5.8	5.6	5.4
Total unemployment rate (percent):						
1991 budget assumptions	5.4	5.3	5.2	5.1	5.0	5.0
1992 budget assumptions	5.4	6.7	6.6	6.2	5.8	5.4

[1] Adjusted for July 1990 revisions. [2] Fourth quarter to fourth quarter.

Table III–7. **EFFECTS ON THE BUDGET OF CHANGES IN ECONOMIC ASSUMPTIONS SINCE LAST YEAR**

(In billions of dollars)

	1991	1992	1993	1994	1995
Budget totals under 1991 budget economic assumptions and 1992 budget policies:					
Receipts	1,140.8	1,228.2	1,323.0	1,422.3	1,510.1
Outlays	1,388.0	1,408.8	1,405.9	1,368.7	1,404.0
Surplus or Deficit (–)	–247.2	–180.6	–82.9	53.6	106.1
Changes due to economic assumptions:					
Receipts	–49.4	–63.2	–70.3	–57.0	–42.8
Outlays:

Increase in deficit	71.0	100.3	118.6	115.4	109.1
Budget totals under 1992 budget economic assumptions and policies:					
Receipts	1,091.4	1,165.0	1,252.7	1,365.3	1,467.3
Outlays	1,409.6	1,445.9	1,454.2	1,427.1	1,470.3
Surplus or Deficit (–)	–318.1	–280.9	–201.5	–61.8	–2.9

SENSITIVITY OF THE BUDGET TO ECONOMIC ASSUMPTIONS

Both receipts and outlays are powerfully affected by changes in economic conditions. This sensitivity seriously complicates budget planning because errors in economic forecasting lead to errors in the budget forecast. Many of the budgetary effects of changes in economic assumptions are fairly predictable, however, and rules of thumb embodying these relationships can be used to estimate how various changes in the economic assumptions would alter outlays, receipts, and the deficit. Table III–8 summarizes these rules of thumb.

These standard rules of thumb do not fully account for the budgetary impacts that are likely in an environment where many thrifts, banks, and other financial institutions are already under stress. In these circumstances, the impact on outlays of lower real GNP growth would be larger than shown in Table III–8. In the past, an average recession has been accompanied by a doubling in the rate of net charge-offs of nonperforming loans at banks, leading to insolvencies. If the increase in charge-offs is greater than in past recessions, then the increase in Federal outlays to cover the liabilities of financial institutions would also be greater.

Table III–8 shows that if real GNP growth is lower by one percentage point in calendar 1991 only, and the unemployment rate rises by one-half percentage point, the 1991 deficit will be increased by $5.9 billion. The budget effects are much larger if the real growth rate is assumed to be one percentage point less in each year 1991–1996 and the unemployment rate rises one-half point in each year. The levels of real and nominal GNP then are below the base case by a steadily growing percentage and the unemployment rate steadily rises compared with the base case. The deficit is $117.8 billion higher than under the base case by 1996.

The effects of slower productivity growth are shown in a third example where real growth is one percentage point lower per year, while the unemployment rate is unchanged. In this case, the estimated budget effects mount steadily over the years, but more slowly. The effect on the deficit reaches $103 billion by 1996.

Joint changes in interest rates and inflation have a smaller effect on the deficit than equal percentage point changes in real GNP growth, because their effects on receipts and outlays are substantially offsetting. If the rate of inflation and the level of interest rates are higher by one percentage point in all years, the price level and nominal GNP rise by a cumulatively growing percentage above their base levels. In this case, the effects on receipts and outlays mount steadily in successive years, adding $63.3 billion to outlays and $78.5 billion to receipts in 1996, reducing the deficit by $15.2 billion.

These estimates assume inflation adjustments with a 2-year lag to the ceilings for budget authority for discretionary programs in accordance with the procedures specified in the Budget Enforcement Act of 1990. They also assume that Congress would increase appropriations to the adjusted ceilings. The lag involved in this adjustment to the ceiling for nominal budget authority results in a reduction in real outlays for discretionary programs when inflation is higher than was forecast in the Act, and an increase in real outlays when inflation is lower.

The table also shows the interest rate and the inflation effects separately, and rules of thumb for the added interest cost associated with higher or lower deficits (increased or reduced borrowing).

The effects of changes in economic assumptions in the opposite direction are approximately symmetric to those shown in the table. The impact of a one percentage point lower rate of inflation or higher real growth would be of about the same magnitude, but with the opposite sign.

These rules of thumb hold the income share composition of GNP constant. Because different income components are subject to different taxes and tax rates, estimates of total receipts can be affected significantly by changing income shares. These relationships are too complex, however, to reduce to simple rules.

Table III–8. SENSITIVITY OF THE BUDGET TO ECONOMIC ASSUMPTIONS

(In billions of dollars)

Budget effect	1991	1992	1993	1994	1995	1996
Real Growth and Employment						
Effects of 1 percent lower real GNP growth in calendar year 1991 only, including higher unemployment:[1]						
Receipts	–5.2	–11.5	–13.9	–14.7	–15.4	–16.0
Outlays	0.7	3.9	4.5	5.8	7.5	8.7
Deficit increase (+)	5.9	15.4	18.4	20.5	22.9	24.7
Effects of a sustained 1 percent lower annual real GNP growth rate during 1991–1996, including higher unemployment:[1]						
Receipts	–5.2	–17.1	–32.0	–48.1	–66.0	–85.1
Outlays	0.7	4.6	9.9	15.2	24.4	32.7
Deficit increase (+)	5.9	21.7	41.9	63.3	90.4	117.8
Effects of a sustained 1 percent lower annual real GNP growth rate during 1991–1996, with no change in unemployment:						
Receipts	–5.1	–17.1	–32.2	–48.8	–67.5	–88.0
Outlays	0.1	1.0	2.8	5.7	10.5	15.2
Deficit increase (+)	5.2	18.1	35.0	54.5	78.0	103.2
Inflation and Interest Rates						
Effects of 1 percentage point higher rate of inflation and interest rates during calendar year 1991 only:						
Receipts	5.6	11.8	12.0	11.5	12.3	12.7
Outlays	4.6	11.0	10.1	11.0	11.4	11.5
Deficit increase (+)	–1.0	–0.8	–1.9	–0.5	–0.9	–1.2
Effects of a sustained 1 percentage point higher rate of inflation and interest rates during 1991–1996:						
Receipts	5.6	18.2	31.9	45.9	61.7	78.5
Outlays	4.6	16.2	27.7	39.2	51.2	63.3
Deficit increase (+)	–1.0	–2.0	–4.2	–6.7	–10.5	–15.2
Effects of a sustained 1 percentage point higher interest rate during 1991–1996 (no inflation change):						
Receipts	0.7	1.9	2.4	2.6	2.9	3.1
Outlays	4.3	13.6	20.0	24.1	27.8	30.0
Deficit increase (+)	3.6	11.7	17.6	21.5	24.9	26.9
Effects of a sustained 1 percentage point higher rate of inflation during 1991–1996 (no interest rate change):						
Receipts	4.9	16.3	29.5	43.3	58.8	75.4
Outlays	0.3	2.8	8.0	15.6	24.5	34.7
Deficit increase (+)	–4.6	–13.5	–21.5	–27.7	–34.3	–40.7
Interest Cost of Higher Federal Borrowing						
Effect of $100 billion additional borrowing during 1991	2.7	7.6	7.9	8.3	8.8	9.0

---

[1] The unemployment rate is assumed to be 0.5 percentage point higher per 1 percent shortfall in the level of real GNP.

PART TWO

THEMES
AND
PRIORITIES

IV. INVESTING IN THE FUTURE

IV.A. INVESTING IN HUMAN CAPITAL AND REFORMING AMERICAN EDUCATION

HIGHLIGHTS

Investments in children and young students will help members of the next generation maximize their human potential and further increase the Nation's human capital. As discussed in this chapter and in Chapter IV.B., the budget includes several initiatives to assist the next generation. They are summarized below:

Preparing Young Children for School

- *Head Start* gives poor and handicapped children a better chance to become healthy and ready for school. The budget requests an additional $100 million over the 1991 funding level. This brings the total to $2.05 billion, which will allow 633,000 youngsters to take advantage of this proven child development program. Head Start funding is supplemented by funding support for early childhood development in the new *Child Care and Development Block Grant program.*
- The *Supplemental Feeding Program for Women, Infants, and Children (WIC)* helps low-income pregnant women and young children get the nutrition they need. Recent studies indicate that each dollar invested in WIC saves several in Medicaid spending. The budget increases WIC by $223 million, to $2.6 billion, 18 percent over 1991.
- *Infant mortality* is a critical problem, particularly in many large urban areas in the United States. Early and regular prenatal care reduces infant mortality, prematurity,

Table A–1. **HIGHLIGHTS OF SPENDING ON EARLY CHILDHOOD, EDUCATION, AND TRAINING**

(Budget authority in millions of dollars)

	Actual 1990	Enacted 1991	Proposed 1992
Preparing young children for school:			
Head Start	1,552	1,952	2,052
WIC	2,126	2,350	2,573
Targeted infant mortality	—	57	171
Immunizations	187	218	258
Reforming Elementary and secondary education:			
Proposed Educational Excellence Act	—	—	690
(Certificate program support fund—non-add)	—	—	200
Precollege math and science education	333	515	661
Increasing access to higher education:			
Pell grants	4,804	5,374	5,775
Presidential achievement scholarships	—	—	170
Guaranteed student loans	4,348	4,210	5,893
Improving workforce skills:			
Job Training Partnership Act adult initiative[1]	1,070	1,088	1,088
Adult education	193	241	251
Total	14,613	16,005	19,582

[1] Amounts for 1990 and 1991 are estimates of activity in those years comparable to the 1992 initiative.

and low birth-weight. To address this problem, the budget includes a new $171 million initiative for prevention activities targeted to the 10 cities with the highest infant mortality rates. Federal support for infant mortality prevention will increase by $676 million, 9 percent over 1991.

- *Immunizations* help assure that children will not fall victim to many contagious diseases. The budget would increase Federal support for categorical immunization grants by $40 million, an 18.2 percent increase over the 1991 enacted level.

Reforming Elementary and Secondary Education

- *Encouraging excellence in education.* Reform of the education system will insure that the Nation's children are better prepared to enter adult life. The budget includes $690 million for a new Educational Excellence Act to support bold new initiatives by States and localities to reform and improve American education.
- *Expanding opportunities for educational choice* is one element of the Educational Excellence Act that will make schools more responsive and stimulate improvements in educational performance. The proposed Act broadens opportunities for educational choice through a new $200 million educational certificate support fund, to encourage State and local efforts to expand parental choice in education.
- *Improving mathematics and science education* is a key to maintaining the Nation's competitive edge in the rapidly changing world economy. The budget proposes to invest $1.9 billion in math and science education, which includes $661 million, a 28 percent increase over 1991, for precollege level activities.

Increasing Access to Higher Education

- *Pell grants* increase opportunities for students from low-income families to attend college. The Administration's proposals for the reauthorization of the Higher Education Act shift more of the Pell grant aid to the lowest income students to encourage and enable them to pursue postsecondary study.
- For the first time, the budget includes supplementary awards for Pell grant recipients tied to academic achievement. These *Presidential Achievement Scholarships* ($170 million) will be given to outstanding low-income students (Pell grant recipients) based on superior high school and college performance.
- In response to mushrooming default costs, weaknesses in the guarantee structure, and management problems, the Administration is overhauling program management and proposing a range of legislative improvements to restore integrity to the *guaranteed student loan* program, to reduce administrative costs, and to reduce government risk.

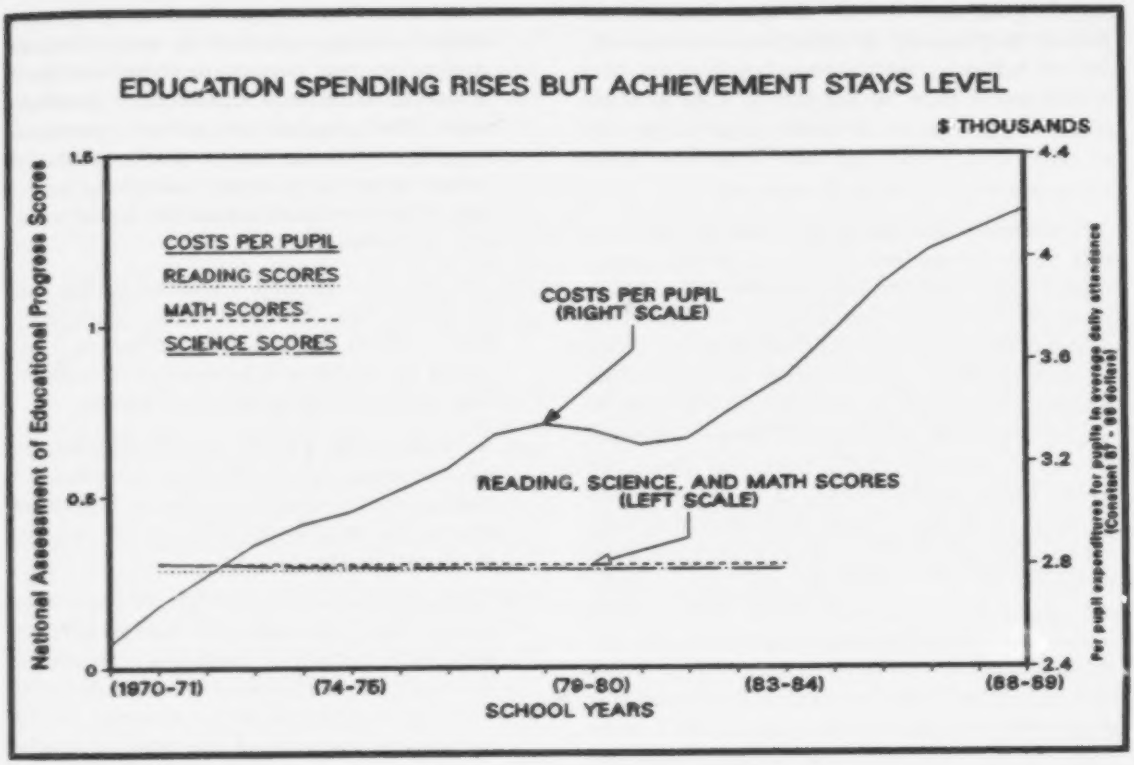
Improving Workforce Skills

- The *Job Training Partnership Act* (JTPA) provides services to improve the skills of adults and make them more employable. The budget includes $1.1 billion for a new, better targeted JTPA program that will provide basic skills and occupational training, job placement, and support services to more than 400,000 severely disadvantaged adults.
- Improving the *literacy* skills of adults is essential for America to remain competitive internationally and to increase productivity. The budget provides $286 million for Department of Education literacy activities, including $251 million for programs in the Adult Education Act.

THE STATE OF EDUCATION TODAY

There is near universal agreement that the educational system in this country, as presently organized and operated, is failing to produce a sufficient number of graduates prepared to meet the demands of the changing workplace. The signs of trouble abound:

- The SAT scores of college bound seniors in 1990 remain a full 50 points below the scores of college bound seniors 20 years earlier.
- Results from the National Assessment of Educational Progress (NAEP) indicate that too many American students read only at a surface level, getting the gist of material



EDUCATION SPENDING RISES BUT ACHIEVEMENT STAYS LEVEL

without developing a deeper understanding of textual material; do not communicate effectively in writing; do not grasp the four basic arithmetic operations in elementary and junior high school; lack the specialized knowledge needed to address science-based problems; and do not understand the context or significance of events that have shaped American history.[1]

- Results from the Second International Mathematics Study, which obtained achievement test results from eighth-graders in 20 countries and from students in their final year of high school in 15 countries, showed that U.S. students performed poorly in every grade and in every aspect of mathematics tested.[2]

These results may reflect the many differences between the school policies in the U.S. and those of other industrialized nations. For example, the typical American school year is short, a remnant of a 19th century agrarian past: 180 days of instruction, beginning in September and ending in June. By contrast, the Japanese Ministry of Education (which sets the minimum for all schools) requires 210 days of instruction; local Japanese school systems add, on average, another 30 days. West German schools are in session for 226–240 days; those in South Korea, for 220 days. The United Kingdom, France, Finland, Luxembourg, and the Netherlands all have school years that are longer than in the U.S.[3] High school students in other industrialized nations often spend 8 hours a day in class, while American students typically spend only 6 hours. By ninth grade, more than 47 percent of Japanese students receive an additional 5 hours of instruction per week outside the regular school day.

Moreover, recent studies have shown that, on average, American students do not work very hard. In a study of the educational experiences of a nationally representative sample of eighth graders, one out of five students reported they usually or often do no homework; almost half reported they are bored at school.[4] NAEP found that 56 percent of 12th graders reported reading 10 or fewer pages a day for all curriculum areas and that 71 percent spent an hour a day or less on homework.

---

[2] Cited in Linn and Dunbar, "The Nation's Report Card Goes Home: Good News and Bad About Trends in Achievement," in *Phi Delta Kappa*, October 1990.

[3] Cited in Michael J. Barrett, "The Case for More School Days," the *Atlantic Monthly*, November 1990.

Educational achievement is not simply a result of what students learn in school; home support and parental involvement is essential. Watching television has become an important pastime for most American families, so much so that students spend nearly as much time watching television each week as they do in school. In 1989, public high school students spent, on average, 25.7 hours in class per week, while children ages 12 to 17 spent an average of 22 hours each week watching television. Younger children spent even more time watching TV, with children ages 2 to 5 watching nearly 26 hours each week. This pattern has obvious and disturbing implications for the Nation's educational performance that are confirmed by NAEP findings which show that students who watched an average of 6 or more hours of television each day performed considerably below their peers who reported less TV viewing.

The existence of these problems has not dulled public support for education. Each year, public expenditures per pupil rise, while gains in achievement do not, as the chart on education spending illustrates.

THE NATION RESPONDS

Report after report has documented the failings of the education system, beginning with *A Nation At Risk* published in 1983. Groups from all parts of American society—parents and teachers, the business community, public officials at every level of government—are calling for change. Signs that the system is beginning to respond can be found in communities throughout the country.

States, which today provide more than half the funding for public education, are undertaking a variety of interesting reforms. Some examples of State activities include:

- *Missouri's* Parents as Teachers program, which is being replicated in many States, aims to educate parents to stimulate their preschool children's intellectual development. The program begins with prenatal training, includes home visits, periodic screening of the children, and group meetings of parents and community-based advisory committees.
- *New Jersey* has been a pioneer in the use of alternative certification of principals and teachers, in order to utilize in education the skills and knowledge of individuals who have pursued other careers.
- At least seven States, led by *Minnesota,* have passed laws allowing interdistrict choice, which enables students to attend the public school of their choice outside their own districts.
- *Connecticut and South Carolina* are two States that have adopted comprehensive education reforms, including revamped curricula to emphasize the mastery of more demanding skills by children in all grades and augmented training for teachers and administrators.
- "Schools for the 21st century" is the State of *Washington's* 6-year pilot grant program designed to determine whether increasing local decisionmaking authority will produce more effective learning.
- *Tennessee, Arizona, Utah, and California* are some of the States that have adopted career ladder programs which encourage teachers to take on new and different roles and to receive compensation tied to those differentiated roles.
- *Kentucky* is completely revising the way its schools are funded. At the same time the State is restructuring the curriculum, establishing performance goals for elementary and secondary education, and adopting measures for determining whether those goals have been met.

Individual school systems are also seeking ways to engage students in learning, to keep them in school, to improve their performance, and to encourage and expand parental involvement in education. Some systems, such as Dade County (Miami), Florida and Rochester,

---

[4] Data from the National Center for Education Statistics's National Educational Longitudinal Survey of 8th graders.

New York are moving toward school-site management and away from centralized decision-making. In those communities, principals and staffs at individual school buildings are given increased control over key decisions affecting education. In the Chicago, Illinois school system, numerous local school boards elected by the community make decisions about key aspects of school operations. Milwaukee, Wisconsin, and parts of the New York City school system, have given parents increased choice in the selection of the schools their children attend.

In response to the President's challenge, businesses and individual business leaders have become more involved in elementary and secondary education. The business community has had a long-standing relationship with America's colleges and universities, but has recently increased efforts to improve the quality of precollege education. Corporate activities run the gamut from helping a school in a single community to substantial investments in projects to change the entire educational system.

Another encouraging development is the increasingly innovative use of technology in education. During the 1980s, schools rapidly increased their use of computers, television and other electronic telecommunications to deliver instructional services. These new technologies have shown promise as an adjunct to teaching in a variety of subject areas and as a means of engaging students at differing skill levels.[5] The growing research and development in this field includes a research center funded by the Department of Education dedicated exclusively to exploring, validating and disseminating ways to improve learning through technology.

NATIONAL EDUCATION GOALS

The President has encouraged revitalizing American education through an emphasis on results: improved performance of students and enhanced accountability for those results by school officials. No longer does the debate focus solely on how much is spent on education, how many children sit in a classroom, or on the age of the school building. Attention has turned to preparing children for the classroom, determining what children should know and can do, and how to measure the performance of the education system.

In September 1989, President Bush convened an Education Summit Conference with the Nation's Governors at Charlottesville, Virginia. Their joint statement declared "the time has come, for the first time in U.S. history, to establish clear, national performance goals, goals that will make us internationally competitive." The President and the Governors developed six ambitious national education goals that President Bush announced in his 1990 State of the Union address; the Governors unanimously endorsed these goals at the February 1990 National Governors' Association meeting.

---

National Education Goals

1. *By the year 2000, all children in America will start school ready to learn.*
2. *By the year 2000, the high school graduation rate will increase to at least 90 percent.*
3. *By the year 2000, American students will leave grades four, eight, and twelve having demonstrated competency in challenging subject matter, including English, mathematics, science, history and geography, and every school in America will ensure that all students learn to use their minds well, so they may be prepared for responsible citizenship, further learning, and productive employment in our modern economy.*
4. *By the year 2000, U.S. students will be first in the world in science and mathematics.*
5. *By the year 2000, every adult American will be literate and possess the knowledge and skills necessary to compete in a global economy and exercise the rights and responsibilities of citizenship.*
6. *By the year 2000, every school in America will be free of drugs and violence and offer a disciplined environment conducive to learning.*

The goals are interrelated: reaching any one is linked to the achievement of the others. The goals are ambitious: meeting them will require increased performance at every level of the education system and the effort of every level of government.

In order for the goals to be meaningful, progress toward achieving them must be measured accurately and reported to the American people on a timely basis. To oversee the development and implementation of a measurement system for the national goals, the President and the Governors have established the National Education Goals Panel. This group of Governors, Administration officials, and Congressional representatives is charged with developing and issuing a "report card" to the Nation on progress toward the national education goals. The first report card will be issued in September 1991.

THE 1992 BUDGET POLICIES

Most of the Federal programs that help States raise the quality of education and help students overcome financial barriers to postsecondary education are in the Education Department. Education Department funding for 1992 would be increased in budget authority by $2.5 billion, and in outlays by $2.6 billion.

Most funding for education comes from State and local governments. There are several areas, however, in which the Federal Government can and will provide leadership and resources to stimulate the reforms necessary for States to achieve these ambitious national education goals.

States and school districts must give parents more responsibility for determining where their children are educated. Selection of the school attended by a child and the kind of educational program that a child receives are crucial decisions that should involve parents and students. The budget contains several proposals that will expand choice and provide that stimulus to change.

Federal funds, which make up only a small fraction of total expenditures on education, can be focused in ways that promote change. The budget provides funds to (a) stimulate reform; (b) support research and evaluation of education programs to determine which approaches are most successful and the conditions under which a program or reform works; and (c) disseminate the results of efforts to reform and improve education.

The Federal Government has a critical role to play in collecting the statistics necessary to determine whether the goals are being met. The very promulgation of the goals has stimu-

Table A–2. HIGHLIGHTS OF THE EDUCATION DEPARTMENT BUDGET

(In millions of dollars)

	Actual 1990	Enacted 1991	Proposed 1992
Elementary and secondary education:			
Proposed Educational Excellence Act	—	—	690
(Certificate support fund—non-add)	—	—	200
Compensatory education[1]	5,222	6,076	6,224
Education block grant	457	449	449
Math and science State grants	127	202	242
Drug-free schools	539	606	632
Services for the disabled:			
Special education[1]	2,202	2,616	2,730
Vocational rehabilitation	1,780	1,889	2,003
Vocational education	937	1,011	1,011
Adult education	193	241	251
Postsecondary education:			
Pell grants and Presidential Achievement Scholarships	4,804	5,374	5,945
Guaranteed student loans	4,348	4,210	5,893
Student support services	242	334	395
Assessment, statistics, research and improvement	95	130	261
Other	3,679	3,959	2,945
Total budget authority	24,625	27,097	29,620
Total outlays	23,110	24,839	27,494

[1] Amounts in 1990 and 1991 adjusted for comparability.

[2] Additional investments in early childhood development are listed in Table A–1.

lated debate about whether and, if so, how to measure learning by individual students in ways that permit comparisons across students, classes, schools, school districts, States, and ultimately, other countries. How to measure performance in education, whose performance to measure, and what information to make public are decisions that differ from State to State, and often, from district to district and from school to school.

At present, NAEP provides the most comprehensive, standard measure of what American students know. NAEP, which is funded by the Department of Education, has provided data about what students know for over 20 years, but those data have been available only on a national basis. For the measurement of the national goals, a more disaggregated system of measurement is needed.

Efforts to improve the quality and content of American education have fostered the idea that every parent ought to be given, at regular intervals, an objective appraisal of their child's educational progress. The information in such appraisals should permit not only parents, but employers, taxpayers, elected officials, and the students to identify areas of educational strength and weakness. Although American students are tested frequently in schools today, those tests do not provide such information. The President's Education Policy Advisory Committee is deeply engaged in this debate. Two major foundations have funded development of national tests that may help meet this need. Ultimately, agreement on some set of integrated measures is essential to track progress being made toward achievement of these goals.

In addition to these broad themes, the budget targets funds to support the efforts of States and localities to achieve the six national education goals.

GETTING CHILDREN READY FOR SCHOOL

American children must be healthy and ready to learn if they are to make the most of the opportunities school offers. The budget enhances support for activities aimed at preventing illness and disease among young children, for research on child development, for direct early childhood development services and for support for low-income parents in caring for their children. Examples include:

- $2.05 billion for *Head Start* to continue the policy of increasing the number of low-income children and their families receiving comprehensive developmental services, screening and immunizations, nutritional and social services. By 1992, Head Start is expected to serve an estimated 58 percent of all eligible four year olds. In addition, 26 States and the District of Columbia finance their own preschool programs, most of which are focused on disadvantaged children.
- $2.6 billion for the *Special Supplemental Program for Women, Infants and Children (WIC)* to provide nutrition assistance and education to low-income women, infants, and children up to age five. The budget provides sufficient funding to serve virtually all eligible pregnant women and infants, as well as additional funds targeted at one- and two-year olds.
- $732 million for the new *Child Care and Development Block Grant,* the first Federal grant program to require that parents be given the option of receiving a certificate which can be used to select the child care of their choice. This can include care by the child's relatives, in the family's community, and in sectarian settings. The grant is described more fully in Chapter V.A. States will use 25 percent of the grant funds to increase the availability of early childhood development and before- and after-school programs and to improve the quality of those programs.
- Almost $10 billion for new and expanded refundable *tax credits to low-income working families with children.* The tax credits, which are described more fully in Chapter V.A., are refundable so that if the credit due exceeds the Federal income tax liability, the difference is paid to the family.
- $300 million for new *child care grants* for families at risk of welfare dependency.
- $293 million for *preschool services to children with disabilities.* States use these funds and funds from special education basic grants, to provide services for an estimated 360,000 children ages three to five.
- $128 million to support State systems to identify and arrange services for *handicapped infants and their families.*
- $124 million in the Department of Health and Human Services for *research and demonstrations* designed to increase the efficiency and effectiveness of social and support services for at-risk children.
- $145 million for *biomedical research* through the National Institute on Child Health and Human Development to expand knowledge and improve treatment of diseases afflicting children, including pediatric AIDS, Sudden Infant Death Syndrome, and childhood accidents and injuries.

IMPROVING ELEMENTARY AND SECONDARY EDUCATION

The Federal Government has limited ability to affect the policies which determine what is taught, by whom and for how long. The budget does, however, include funds for initiatives designed to stimulate educational change and to maintain support for services to children most at risk of failure.

Among the host of Federal education programs, none focuses directly on the key issues

States must address in order to achieve the national education goals. For example, the reform which is increasingly seen as holding the greatest promise for significant change in education is educational choice. A number of States and school districts are experimenting with a variety of choice options; many more need encouragement to do so. The budget provides $690 million for a new *Educational Excellence Act,* which would provide those incentives. Major provisions of the Act:

- Authorization for $200 million for an *Educational certificate program support fund.* This program will provide incentive grants to local school districts with qualified certificate programs that enhance parental choice. Funds will be available only to school districts with Federal compensatory education programs for the disadvantaged that also have operational certificate programs. Qualified programs will, at minimum, provide for public and private school choice. Districts that receive funds will be able to use them for a range of educational services.
- Other *education choice* provisions of the new Educational Excellence Act include: new resources for nationally significant demonstrations of innovative approaches to choice; re-direction of the Education Department's block grant funds to support choice programs; support for magnet schools. The budget also continues support for the Education Department's new center and clearinghouse for information on choice programs.
- Additional authorizations are included to support *new programs* to: reward schools that raise overall student achievement; reward States with alternative methods for certifying and training teachers and school administrators; recognize and reward excellent teachers; create a new approach to training of excellent school administrators; increase the endowments of Historically Black Colleges and Universities; stimulate adult literacy; and to provide a new performance-based initiative in science and mathematics (discussed later in this chapter).
- *Flexibility and accountability.* At the 1989 Education Summit, the President and the Governors agreed to seek legislative authority to give States more latitude in how they use Federal programs funds for education in return for enhanced accountability for results. Congress failed to enact legislation to increase flexibility in the use of Federal funds in 1990. The Educational Excellence Act will contain a new effort to enact this focus on flexibility and results.

The budget continues support for existing programs, designed primarily to enhance the educational performance of students who are most in need of additional assistance and to enhance the skills of students who do not intend to move into postsecondary education.

- $6.2 billion for *compensatory education* to improve the skills of over five million educationally disadvantaged children. Federal policy and new funding will emphasize improving the performance of the lowest achieving children.
- $2.7 billion for the education of four million *children with disabilities,* an increase of $114 million over 1991.
- $1 billion for the support of *vocational education,* with emphasis on the integration of academic and job-related skills at the secondary and postsecondary levels and improved program accountability.
- $632 million for the *Drug Free Schools and Communities Act* including $50 million, a $25 million increase over 1991, for emergency grants to school districts hardest hit with drug problems. These activities are discussed more fully in Chapter V.B., "Ending the Scourge of Drugs."
- Several agencies, including The Department of Education, the National Science Foundation, the Department of Energy, and the National Endowment for the Humanities, support the *training of new teachers and the upgrading of skills for existing teachers.* Federal funds provide scholarships and loans to persons interested in entering the teaching profession and are used to provide residential summer workshops, and university-based courses for current classroom teachers. The budget will include $20 million for a new legislative authority to establish

partnerships between school districts and universities to provide school-based teacher training.

- Support for various *education research and statistics activities* including the development of new techniques for student assessment, the expansion of the National Assessment of Educational Progress (NAEP), and U.S. participation in international assessments—all central to the measurement of progress toward the national education goals.

The Federal Government, particularly the Departments of Education and Labor, play a significant leadership role in efforts to discourage dropouts and to encourage those who have dropped out to return to school. The budget includes:

- $29 million for the support of carefully designed and evaluated *dropout demonstration projects* to provide information on the strategies that are most successful in preventing at-risk children from dropping out of school and in encouraging those who have left to return to school.
- $874 million for the *Job Corps* program, which annually provides basic education and vocational skills training for about 65,000 high-risk economically disadvantaged youth.
- $1.3 billion for the Labor Department's new year-round *youth education and job training program* and $25 million for a new Youth Opportunities Unlimited (YOU) demonstration program. The new programs, targeted on severely disadvantaged youth, will offer comprehensive services and will provide incentives to communities to coordinate programs.
- Continuing support for *data collection activities related to the issues of school completion and school dropouts.* A longitudinal study of a nationally representative sample of students who were in the eighth grade in 1988 is designed to influence school policies and practices aimed at reducing school drop-outs.

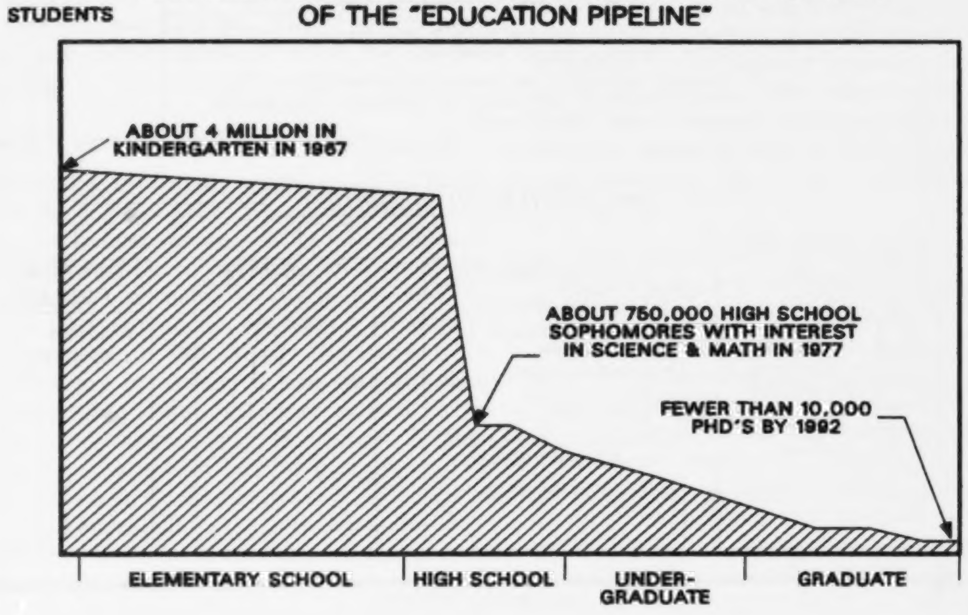
MAKING U.S. STUDENTS FIRST IN THE WORLD IN MATH AND SCIENCE

Improvement is essential in all fields of education, but in none is it more critical to the future of the economy than mathematics and science. Since early 1990, the interagency Committee on Education and Human Resources (CEHR) of the Federal Coordinating Council on Science, Engineering, and Technology has been examining what steps might be taken to address the national education goals related to math and science education.

The Committee began with an examination of the science and engineering "pipeline". There are two interrelated pipeline problems: a sharp drop in the number of students pursuing education in math, science, and engineering (a problem of quantity); and poor student achievement in math and science at the precollege level (a problem of quality). Students who have poor experiences in math and science tend not to pursue higher levels of education in these fields.

The decline in student interest in math and science has been documented by a series of longitudinal surveys by the Department of Education; the decline in achievement has been documented through tests conducted by the International Association for the Evaluation of Educational Achievement. Data from these sources present a composite picture of the various problems encountered as students progress through the education pipeline.

- *By Grade 5:* U.S. students score roughly in the middle on international science tests.
- *By Grade 9:* U.S. students score at the bottom on international tests on science and advanced mathematics; minority students demonstrate especially poor proficiency in math and science; 75 percent of junior high school science teachers do not meet qualifications standards recommended by the National Science Teach-



REVITALIZING MATH, SCIENCE AND ENGINEERING EDUCATION REQUIRES GREATER INVESTMENT IN THE EARLY STAGES OF THE "EDUCATION PIPELINE"

ers Association and the National Association of Teachers of Mathematics.

- *By Grade 10:* Fewer than one in five students expresses interest in pursuing education in natural science or engineering.
- *By Grade 12:* Fewer than one in 10 students tested is prepared for college level science courses.
- *At the College Undergraduate Level:* Only 60 percent of the incoming freshman who begin pursuit of a career in the natural sciences and engineering actually earn a B.S. degree.
- *At the Graduate Level:* Fewer than 10,000 U.S. students per year eventually earn Ph.D degrees in the natural sciences and engineering; 24 percent of Ph.D degrees awarded in those fields go to foreign students.

The Committee on Education and Human Resources developed a set of strategic and implementation priorities which are illustrated in the following chart. The proposed strategy emphasizes precollege education, and, within precollege education, places priority on teacher preparation, curriculum reform and systemic organizational reforms. The budget reflects these Committee priorities.

The budget includes $1.9 billion for all levels of math and science education, a 13 percent increase over 1991. Within that total, is a 28 percent increase over 1991 for precollege programs. The specific allocation of funding by educational level and by Federal agency is shown in Table A–3.

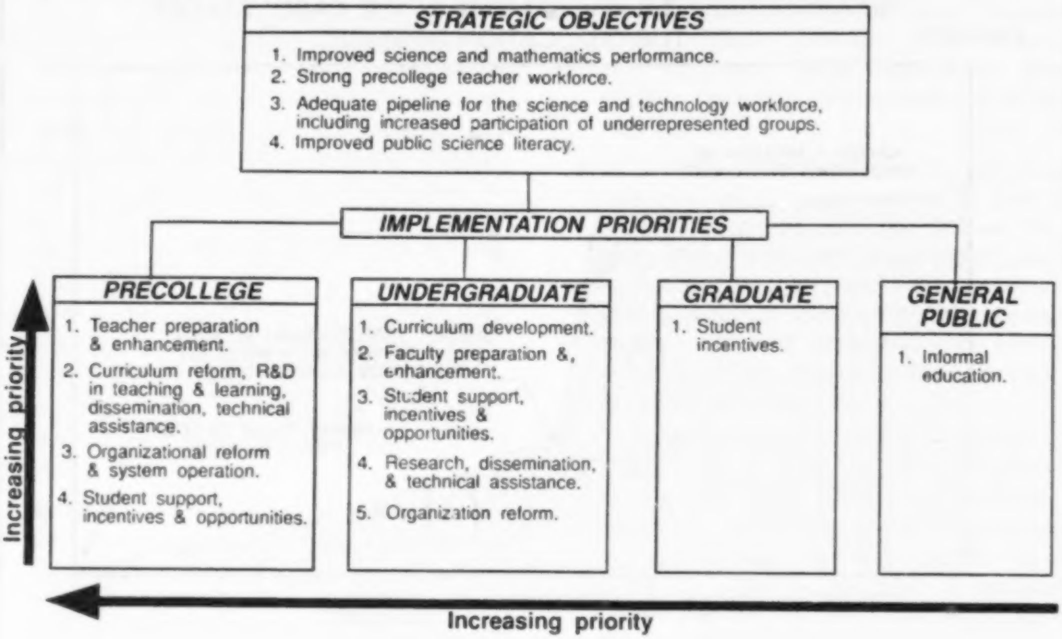
PRECOLLEGE

The budget increases the current Federal investment on programs to enhance student learning, teachers, instruction, and curriculum materials, and broad school system reform.

Performance-Based Initiative in Math and Science

As part of the new Educational Excellence Act proposal, the budget includes a $40 million Education Department grant program for incentives to school districts to improve student

THE 1992 BUDGET ESTABLISHES A STRATEGIC FRAMEWORK FOR PROGRAMS TO IMPROVE MATH, SCIENCE AND ENGINEERING EDUCATION



STRATEGIC OBJECTIVES
1. Improved science and mathematics performance.
2. Strong precollege teacher workforce.
3. Adequate pipeline for the science and technology workforce, including increased participation of underrepresented groups.
4. Improved public science literacy.
IMPLEMENTATION PRIORITIES
PRECOLLEGE
1. Teacher preparation & enhancement.
2. Curriculum reform, R&D in teaching & learning, dissemination, technical assistance.
3. Organizational reform & system operation.
4. Student support, incentives & opportunities.
UNDERGRADUATE
1. Curriculum development.
2. Faculty preparation &, enhancement.
3. Student support, incentives & opportunities.
4. Research, dissemination, & technical assistance.
5. Organization reform.
GRADUATE
1. Student incentives.
GENERAL PUBLIC
1. Informal education.
Increasing priority
Increasing priority

Table A–3. FUNDING INCREASES FOR MATHEMATICS, SCIENCE, AND ENGINEERING EDUCATION ACTIVITIES

(Budget authority; dollar amounts in millions)

	Enacted 1991	Proposed 1992	Dollar change	Percent change
By educational level:				
Pre-college	515	661	+146	+28
Undergraduate	417	477	+60	+14
Graduate	784	803	+19	+2
Total	1,716	1,941	+225	+13
By agency:				
Agriculture	20	22	+2	+10
Commerce	7	8	+1	+14
Defense	416	416	—	—
Education	235	330	+95	+40
Energy	64	74	+10	+16
Environmental Protection Agency	7	13	+6	+86
Health and Human Services	486	513	+27	+6
Interior	41	42	+1	+2
National Aeronautics and Space Administration	68	67	−1	−2
National Science Foundation	372	456	+84	+23
Total	1,716	1,941	+225	+13

performance in math and science. Districts showing significant increases in student performance in math and science would qualify for a grant and could decide to use the funds for any purpose that will effectively promote continued improvements in math and science learning.

Teacher Preparation and Enhancement

Increasing the supply of well-qualified teachers is the highest priority for precollege activities. The budget includes $359 million to support workshops, courses, summer research appointments, partnerships with national research labs, equipment loans, and other innovative programs. The Energy Department laboratories are pioneering in the effort to bring teachers into the Nation's research laboratories to learn about the latest developments in science and how to incorporate new knowledge into classroom instruction. The goal of these Federal efforts is to enhance the skills of all precollege math and science teachers by 1995.

Curriculum Reform, Dissemination and R&D

The budget includes $137 million for research to develop and disseminate new curricula and standards, and new educational technologies to enhance student learning. Funds will be used to support: projects involving partnerships between publishers, schools and school systems, and academic curriculum development teams; improvements in the use of computers, computer networks, videoconferencing, and laser videodiscs in the classroom; and a diffusion network to disseminate information about exemplary education programs available for adoption by schools, colleges, and institutions.

Organization Reform and System Operation

The budget includes $58 million to support efforts to foster education reform. One initiative provides support and incentives to accelerate State adoption of the effective types of teacher preparation and enhancement, curriculum and research, assessment, standards, and student incentive programs that are discussed above.

Student Incentives and Opportunities

One way to increase enrollment in science and mathematics is to stimulate the natural curiosity of young students about math and science. The budget includes $48 million for activities such as science fairs, research experiences at university and college campuses, national labs, research facilities, museums, and national parks, as well as direct student financial assistance, and cooperative education.

UNDERGRADUATE

Recent studies of undergraduate science and engineering education document the need to attract, and to graduate, a sufficient supply of well-trained scientists and engineers to meet future needs. For the next several years, there will continue to be fewer traditional college age (18–24 years old) students in the population. More of these students will be from groups (i.e., women and minorities) that traditionally have been under-represented in science and engineering disciplines. Over the next decade, improvements at the precollege level should increase the number of undergraduates pursuing science and engineering. In the short term, however, specific improvements at the undergraduate level are needed.

The budget focuses on improving the quality of the undergraduate academic experience, particularly in the first 2 years of a 4-year undergraduate sequence through improvements in curricula, faculty enhancements, and student incentives.

Curriculum Development and Laboratory Improvement

In a number of critical fields, undergraduate course curricula have changed little in the past 20 years, remaining narrowly focused while some of the most exciting research spans several disciplines. The budget provides $124 million for the support of activities to help undergraduate curricula and laboratories keep pace with changes in scientific research.

Faculty Development and Enhancement

Faculty often devote the majority of their time to preparing classroom and lab experiences for undergraduates, making it difficult to stay abreast of advances in research and teaching methods. They need opportunities to confer with other experts in their fields, and exposure to new research developments, better teaching methods and instrumentation. Because of the resources at the national labs, the Federal Government is in a unique position to provide these opportunities. The budget provides $42 million to support research experiences for undergraduate faculty at leading research universities and national labs, workshops, conferences, and courses.

Student Support and Opportunities

The largest share of Federal support for undergraduate math, science, and engineering education is used to attract and retain science and engineering students. Funded activities range from scholarships to cooperative education to student research programs. In addition to the $20 billion in student financial aid generated by the broad-based programs of the Higher Education Act, the budget provides $230 million for activities focused on students in science and engineering fields.

GRADUATE

Graduate training to develop productive researchers and advance science is essential to the country's scientific, strategic, and economic growth. The budget includes $803 million for graduate education, 42 percent of all money the Federal Government spends on math and science education.

Graduate education is the traditional focus of mission-oriented Federal agencies. Federal money is often the major source of funds for study in specialized fields, such as nuclear engineering and human genome research. Most of the support for graduate education goes into pre- and post-doctoral traineeships and fellowships.

INCREASING ACCESS TO POSTSECONDARY EDUCATION

The Federal Government, through the programs of title IV of the Higher Education Act (HEA), provides 68 percent of all of the funds for direct grants, loans, and subsidized jobs available to postsecondary students. The largest source of support for higher education is actually the funding provided by States directly to institutions. That funding, however, is provided primarily on a per capita basis (resulting in lower tuitions), so that low-income and high-income persons benefit equally. The Federal Government, therefore, provides additional aid that makes access to higher education possible for lower income students. Incremental changes in the law over the years have weakened the ability of HEA programs to provide that access to students with the lowest incomes.

The Administration's proposals for reauthorization of the Higher Education Act mark a fundamental break with the pattern of recent changes. Under these proposals, grant aid would be refocused to deliver more aid to the poorest students; additional aid will be sought to reward academic excellence; services that help low-income and minority students prepare for, enter, and stay in postsecondary education would be made more widely available and more effective; and, the integrity of the guaranteed student loan (GSL) programs would be restored. If ongoing analysis demonstrates the feasibility and cost effectiveness, a proposal may be made to replace the current GSL program with a Federal direct loan program.

PELL GRANTS

For the Pell grant program, the budget requests $5.8 billion, an increase of $401 million or 7 percent over 1991. Reauthorization proposals would raise the maximum Pell award to $3,700, an increase of $1,300 or 54 percent over the 1991 level. The average award would be raised to $1,909, an increase of $425 or 29 percent over the 1991 level. These increased expenditures and award levels would be provided in ways that counteract the past liberalizations in need analysis and Pell grant rules that have shifted funds from the lowest income Pell applicants to others from higher income levels.[6]

---

[6] Mortenson, Thomas G., "Pell Grant Program Changes and Their Effects on Applicant Eligibility 1973–74 to 1988–89", for the American College Testing Program, spring 1989.

There is evidence (a) that "aid in the form of grants has the largest effect on the enrollment behavior of students from low-income families"[7] and (b) that low-income persons are particularly sensitive to increases in college costs.[8] The higher spending and award levels help shift resources to the poor, but equally important to improving conditions are the proposed changes in eligibility and award rules. Among the most significant changes is an award rule that would, subject to other rules, have the Pell grant meet 79 percent of objectively measured need, less the expected family contribution, for students with family incomes under $10,000, compared with 30 percent of need for family incomes over $30,000. Under current law, Pell grants can meet up to 60 percent of cost of attendance for eligible students, regardless of family income.

Students from somewhat higher income families may also need help to pay for higher education, especially at higher cost private schools. The Administration's proposals recognize this need as well, and increase annual loan limits for the heavily subsidized Guaranteed student loans.

Recognizing and Rewarding Academic Achievement

The budget proposes $170 million for new Presidential Achievement Scholarships for high achieving Pell grant recipients. This reauthorization proposal would, for the first time, use title IV HEA aid to provide incentives to students to raise their academic standards and performance. Under this proposal, awards would be given to outstanding first year Pell grant recipients, based on superior high school performance. Pell recipients could qualify for additional awards based on their postsecondary academic performance. This $500 award is in addition to the basic Pell grant, which is provided solely on the basis of need.

The reauthorization proposals would specify that once in a postsecondary institution, no individual may continue to receive HEA aid unless his class standing is above the lowest 10 percent. Although this standard should not be very hard to meet for the vast majority of aid applicants, it will exclude some who can now receive aid despite extremely poor performance. Coupled with rewards for high achievement, this provision adds weight to the determination that aid applicants understand the value not only of attendance but of improved performance in higher education, and that aid should be delivered to those most likely to benefit from and succeed in postsecondary education.

STUDENT SUPPORT SERVICES

Federal funds support services for low-income and minority elementary and secondary students to help them prepare for higher education, and to help such students stay in higher education. For these support services, the budget includes $395 million, an increase of 18 percent over 1991. Reauthorization proposals would change the way both types of services are funded, so that they reach more students and provide aid more effectively.

Federally funded pre-college services are now provided to institutions that, in general, have been receiving the funds for many years. However effective individual projects may be, there is no evidence that the programs, as a whole, are affecting average college going rates among low-income and minority groups.

Reauthorization proposals would provide this aid to State higher education agencies, which would then provide the funds to institutions of higher education that form ties with schools with compensatory education programs. These schools have the highest concentrations of low-income students and are receiving $5.7 billion in Federal aid for their educationally disadvantaged students. The new support services program will make it possible to devise strategies that capitalize on both resources to aid the students who need it most.

For students in postsecondary schools, reauthorization proposals would require that any school whose students benefit from Federal HEA aid must have basic support services in place for these students. Federal aid for 2- and 4-year schools would be reserved for those in the weakest financial situation that need this help in order to provide quality services.

Average award (in dollars)	—	500

RESTORING INTEGRITY TO THE GUARANTEED STUDENT LOAN (GSL) PROGRAMS

The Federal Government helps students and their parents meet the costs of postsecondary education by creating an extensive private market for student loans operated through an intermediary set of State and non-profit private entities termed guarantee agencies. Annual loan volume in the GSL program has roughly doubled since 1982 and quadrupled since 1979. Loans outstanding at the end of 1990 totalled almost $53 billion.

Unfortunately, gross default rates have also grown rapidly, climbing from 12.5 percent in 1980 to 16 percent in 1990, although the net default rate, which takes collections into account, has remained at 10 to 11 percent. In the summer of 1990, the Higher Education Assistance Foundation (HEAF), one of the largest guarantee agencies, collapsed—another sign of trouble in the GSL program. In addition, Senate hearings on the student aid programs called attention to a range of statutory and administrative weaknesses in the GSL program.

Legislative changes to improve the GSL program were proposed by the Administration and largely incorporated into the *Omnibus Budget Reconciliation Act of 1990*. These include, most importantly, eliminating from GSL loan eligibility students at schools with unacceptably high default rates (35 percent in 1991 and 1992, 30 percent in 1993 and subsequent years). Savings from these reforms are projected to be $1.7 billion over 5 years. The budget proposes to extend this eligibility limitation to all title IV aid programs.

Problems in the administration of the current GSL program are being addressed by a combined *Department of Education/OMB management review* team, with representatives from other Federal agencies and the private sector. The Team's recommendations will be used to restructure the loan program management, including improving oversight and compliance of schools, lenders and guarantee agencies.

Loan Program Restructuring

The GSL program requires extensive legislative restructuring. The budget is based on a wide-ranging set of legislative changes. While these changes would continue the current policy of using banks to provide private capital for the student loans, that aspect of the programs is also the subject of analysis. Whether it would be desirable to propose changes to that feature of the programs remains to be determined.

The proposed legislative changes include:

Reduce Federal Government Risk.—States would be required to back the guarantee agencies with full faith and credit assurance. In the case of a guarantee agency collapse, States would assume some of the financial risk (the difference between the Federal reinsurance level and the insurance paid to lenders and part of the administrative costs). States would be allowed to charge schools a fee to help cover full faith and credit assurance obligations; the fee schedules would be subject to Education approval. If States do not choose to back a guarantee agency, a risk-based premium would be assessed on schools in the State. States would also be required to pay a share of default costs if the default rate of schools in the State exceeds 20 percent. Risk-sharing will encourage States to help improve program management, to impose necessary controls on State licensure, and to improve or decertify schools that cannot provide quality education.

Lenders with default rates above 20 percent would have their special allowance payments reduced by .25 percentage points (currently 3.25 points over the plus 91-day Treasury bill rate). This will penalize only lenders with unacceptably high default rates.

Stabilize Guarantee Agencies.—Guarantee agencies would be required to maintain minimum reserve levels and the Secretary would be permitted to take over a failing guarantee agency. Federal payments for administration would be limited to actual costs, rather than the current flat fee. Management improvements include new requirements for financial management plans and improved data reporting to the Government.

Meet Minimum Quality Standards.—States would be required to ensure that schools meet certain minimum quality standards before granting licenses to operate; accrediting agencies would monitor the quality of the schools they review, and schools with default rates over 25 percent by 1994 would eliminated from the student aid program.

Control Costs at Vocational Schools.—Students in short-term vocational programs are among those with the highest default rates. The maximum allowable cost of attendance at less than 1-year vocational programs, financed by HEA aid, would be limited to local community college costs. Additional analysis of appropriate Federal policies for vocational training address issues beyond the Higher Education Act is also underway and may lead to further proposals.

Other Default Prevention Proposals.—Other proposals include: eliminate eligibility for less than 600 hour programs, foreign schools and correspondence schools, which tend to have high default rates; require credit checks for borrowers age 21 and over, require a co-signer if the borrower has a negative credit history; no commissions for school recruiters that recruit unprepared students; require 60-day delayed disbursement for first year students at schools with default rates over 30 percent; and, require lenders to offer graduated repayment schedules.

Improve Default Collection.—Proposals include: authorize wage garnishment of defaulters; expand the successful IRS program that offsets loan debt against tax refunds; repeal statute of limitations for collection of defaulted loans; authorize data matches with State employment security offices and Federal agencies to locate defaulters; repeal bankruptcy discharge of default responsibility, except upon showing hardship by the debtor; and, require "skiptracing" information to help find defaulters.

IMPROVING WORKFORCE SKILLS

Seventy-five percent of the people who will constitute the American workforce in the year 2000 are adults today, and, by some estimates, 20 to 30 million lack the basic literacy skills necessary to function effectively in society. Improving the skills of adults is a responsibility shared by the public sector, by employers and unions, by private training institutions and by individuals (both as participants in adult education programs and as volunteers helping others to improve their skills). State governments have begun to play a substantial role in the development of adult education systems linked closely to economic development. Employers and labor unions have undertaken significant efforts to enhance the skills of workers already on the job.

The Federal Government provides direct assistance for training to prepare persons for entry into the labor market and subsidizes, through the tax system, employer training of workers. Federal funds also support research to analyze, understand and disseminate information about successful practices and to gather information about literacy and skill levels in the adult population. Examples of these activities in the budget include:

- $286 million in Department of Education *adult literacy* activities: $251 million for activities funded through the Adult Education Act and $35 million for activities funded through the Library Services and Construction Act. Funds will be used by States and localities to support literacy programs for adults who lack a high school diploma or whose basic skills are not sufficient for successful functioning in daily life.
- $60 million for the *Even Start* program, an intergenerational approach to the problem of literacy which integrates in one program early childhood education services for at-risk children and adult education for their parents who lack a high school diploma.
- $1.1 billion for the Administration's proposed *JTPA adult State grant program.* The restructured program would offer assessment, basic skills and occupational training, job placement, and support services to more than 400,000 severely disadvantaged persons age 22 and older. At least 50 percent of enrollee would come from groups that face particular barriers to employment, in addition to being economically disadvantaged.
- Up to $1 billion for the *Job Opportunities and Basic Skills (JOBS)* program for States to use to provide training, remedial education, and work programs for AFDC recipients.
- Two Department of Labor commissions: the *Secretary's Commission on Achieving Necessary Skills (SCANS),* charged with identifying the skills that workers need to close the gap between educational achievement and workplace requirements; and the *National Advisory Commission on Work-Based Learning* formed to advise the Secretary on issues relating to training the American workforce, including the design of a voluntary system to accredit business training programs and certify credentials for skilled trainees.
- An initiative in the proposed Educational Excellence Act, to support *innovative adult literacy activities.*
- A *research center on adult literacy,* supported by the Departments of Education, Labor, and Health and Human Services.
- The first *national survey ever undertaken to determine the literacy skills* of a representative sample of adults. Results from this assessment will be available in early 1993.

IV.B. FOCUSING ON PREVENTION AND THE NEXT GENERATION

HIGHLIGHTS

A well-known proverb states that "an ounce of prevention is worth a pound of cure." This conventional wisdom is supported by data which suggest that many of America's most common and deadly diseases are preventable, and that a greater investment in America's children might yield considerable savings in spending on social programs later in life. Prevention makes both social and economic sense.

The budget contains initiatives which recognize the value of investment in prevention and in children, including increased funding for:

- childhood immunizations;
- infant mortality reduction (including a new initiative targeted at 10 high risk cities);
- breast and cervical cancer prevention;
- smoking cessation;
- physical fitness and nutrition programs;
- injury prevention;
- access to health care;
- family planning;
- lead poisoning prevention;
- substance abuse prevention; and
- evaluations of prevention and children's programs designed to ensure that Federal investments get the highest possible payoff.

The budget proposes funding these initiatives at the levels shown on Table B–1 below.

BACKGROUND

The current generation of Americans enjoys the longest life expectancy (75 years) of any in the country's history, yet still faces disease, death, and disability from preventable illnesses. About half of the 2.2 million deaths which occur in the U.S. every year (see Table B–2) are potentially preventable, as are many of the illnesses that afflict millions of Americans. One national goal is to avoid having people become sick from preventable illnesses and

Table B–1. **THE BUDGET PROVIDES INCREASES FOR PROGRAMS FOCUSED ON PREVENTION AND THE NEXT GENERATION**

(Obligations in millions of dollars)

	1991 Enacted	1992 Proposed	Percent Increase
Childhood immunization	218	258	+18.3
Infant Mortality Initiative	7,335	8,011	+9.2
(Targeted Infant Mortality Initiative—non-add)	57	171	+300.0
Breast and Cervical Cancer Prevention	269	410	+52.4
Smoking Cessation	90	97	+7.8
Physical Fitness and Diet	122	139	+13.9
Accident and Injury Prevention	1,683	1,907	+13.3
Access to Preventive Health Care	5,410	6,026	+11.4
Family Planning	399	420	+5.3
Lead Poisoning Prevention	8	41	+412.5
Substance Abuse Prevention	1,442	1,515	+5.1

injuries, and to reduce the number of years of potential life lost (YPLL, also shown on Table B–2) due to preventable conditions. By not waiting for people to require treatment, prevention can both improve lives and reduce medical treatment costs.

To ensure that the next generation enjoys the same 75-year life span, and hopefully improves upon it, this generation has a responsibility to ensure that young people get as good a start in life as society can offer. As the next generation of Americans grows up, they should enjoy the benefits of efforts to prevent many of the diseases and deaths that afflict this generation. The budget therefore places a priority on prevention activities, especially those which will help ensure a healthy, productive future for the nation's children.

The budget also places a priority on children's programs because child-oriented funding can help prevent future problems for both the individual and society. In placing this high priority on children's funding, the Administration is attempting to modify the funding trends of the past three decades shown on the chart below.

Federal investments in children have not kept pace with increases in other Federal spending. The Administration's emphasis on children, as discussed in this Chapter and in Chapters IV.A., V.A., and V.B., covering investments in education, increasing choice and expanding opportunity, and ending the scourge of drugs, makes a clear and strong commitment to the nation's young and to ensuring a better future for the next generation.

Table B–2. **LEADING CAUSES OF DEATH AND ILLNESS IN AMERICA, 1991**

Cause of Death	Death	YPLL	Prevalence	Hospitalizations
Heart Disease	730,815	1,330,000	21,010,000	3,552,000
Cancer	512,821	1,863,000	7,076,000	1,441,000
Stroke	145,989	237,000	2,516,000	717,000
Injuries	96,914	2,229,000	59,161,000	2,475,000
Lung Diseases	89,629	144,000	13,967,000	535,000
Pneumonia and Influenza	81,151	178,000	126,224,000	1,101,000
Suicide/Homicide	55,939	1,493,000	(1)	[2]2,475,000
Diabetes	48,869	160,000	6,221,000	419,000
AIDS	47,500	1,301,000	140,000	135,000
Infant Mortality	38,131	2,650,000	(1)	(1)
Liver Diseases	26,174	226,000	900,000	61,000
Additional Causes of Death	333,596	739,000	N/A	N/A
Total	2,207,528	12,550,000	N/A	N/A

N/A = Not applicable.

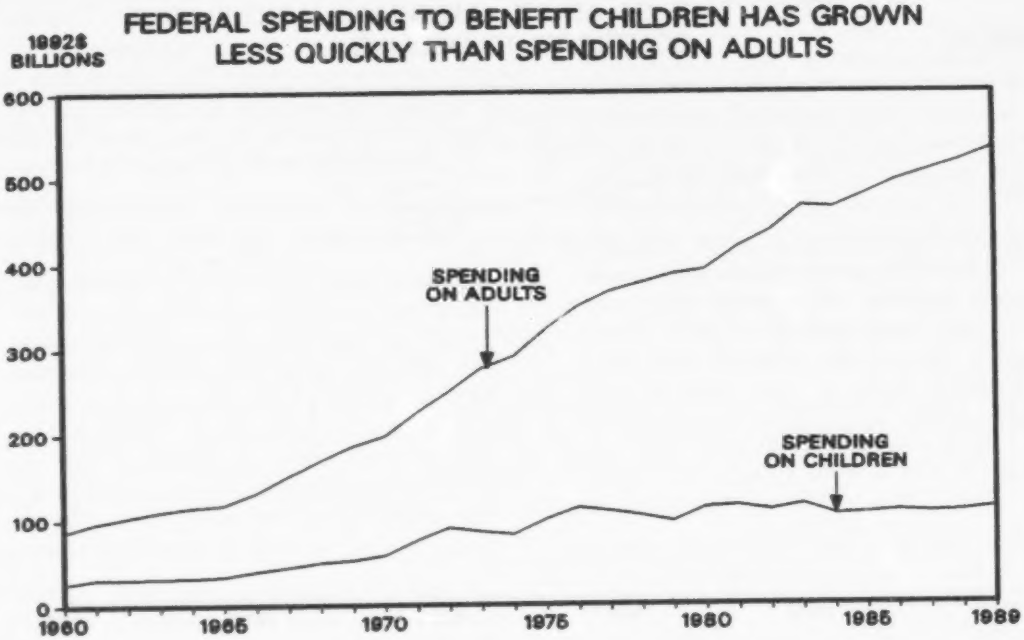
[1] Prevalence figures not available for suicide/homicide and infant mortality since prevalence is a less applicable concept for these causes than for the others shown. Hospitalization data similarly unavailable for infant mortality.

[2] Injury hospitalization data include figures for suicide/homicide, which are not collected separately.

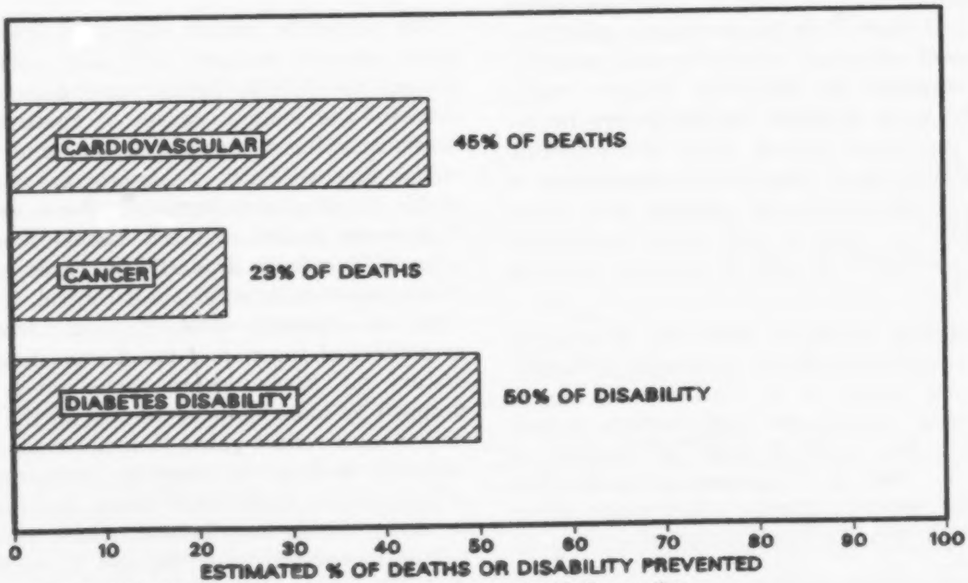
Source: Public Health Service and Centers for Disease Control projections.

NOTE: Prevalence figures are estimates of the number of persons in the United States who have a particular disease or who will experience serious injury some time during a given year. Years of potential life lost before age 65 (YPLL), prevalence, and hospitalization data are provided in addition to cause of death figures since these three sets of data provide a broader sense of the impact a particular disease has on society. These additional indicators illustrate, for example, that while some diseases (e.g. diabetes) cause fewer deaths than others (e.g. cancer), those diseases causing fewer deaths nonetheless affect the lives of a great many Americans. These indicators also show that since some causes of death, such as infant mortality and AIDS, affect the young disproportionately, they produce a high number of potential years of life lost. Taking a variety of such indicators into account is thus important when considering prevention activities.

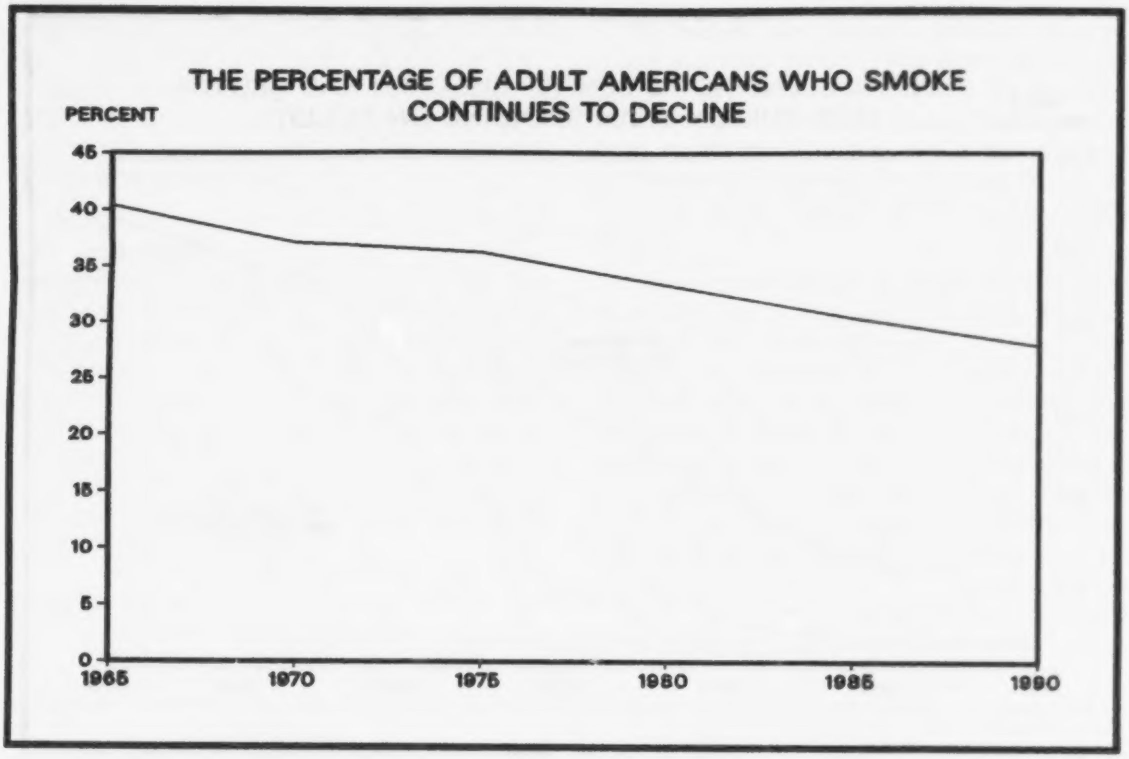
FEDERAL SPENDING TO BENEFIT CHILDREN HAS GROWN LESS QUICKLY THAN SPENDING ON ADULTS



CHANGES IN BEHAVIOR, EARLY DETECTION AND INTERVENTION COULD PREVENT:



Source: HHS Office of Disease Prevention and Health Promotion.



THE PERCENTAGE OF ADULT AMERICANS WHO SMOKE CONTINUES TO DECLINE

Preventing deaths and illnesses: Research suggests that better control of fewer than 10 factors—such as diet, prenatal care, exercise, the use of tobacco, alcohol and illegal drugs, and the use of seat belts—could prevent between 40 and 70 percent of all premature deaths, a third of all cases of acute disability, and two-thirds of all cases of chronic disability (see examples in Behavior Change chart, above).[1] Many of these factors involve freely-made individual choices. Since the preservation of individual choice is a cornerstone of American democracy, for disease and injury prevention to succeed they must necessarily become personal as well as national priorities in the U.S.

Changing voluntary behavior: The nation has witnessed the effects of changes in behavior across society as the incidence of one of the leading contributors to preventable deaths, smoking, has declined from 40 percent in adults in 1965 to 28 percent in 1990. This dramatic behavior change was brought about through a complex combination of actions by individuals, private industry, health providers, and all levels of government (see chart above). This focus on behavioral change is also a key ingredient of the strategy to rid America of illicit drugs.

The favorable health effects of these and other behavior changes have been enormous. During the 1980's, death rates declined for three of the leading causes of death among Americans: heart disease, stroke, and motor vehicle crashes. Much of this progress is attributable to changes in behavior. The more than 40 percent decline in heart disease mortality since 1970 reflects dramatic increases in high blood pressure detection and control, the decline in cigarette smoking, and increasing awareness of the role of blood cholesterol and dietary fat. Stroke death rates, which have dropped by more than 50 percent in the same period, also reflect gains in hypertension control and declines in smoking. Increased use of safety belts, lower speed limits, and declines in alcohol abuse have helped reduce traffic fatalities by one-third over the past 15 years.[2]

[2] James O. Mason and J. Michael McGinnis, "Healthy People 2000: An Overview of the National Health Promotion and Disease

Fostering prevention-oriented behavior changes: Two general types of actions are available: 1) *education* of the general public, health professionals, private businesses, insurance companies, and government about the benefits, including cost savings, of health-promoting behaviors; and 2) *provision of preventive services* to those unable to afford them.

Some interventions that work to reduce preventable illness, injury, and deaths include:

- *Immunizations*—The very model of prevention, immunizations were largely responsible for the dramatic decreases in reported cases of vaccine preventable diseases such as polio (from 18,308 in 1954 to 5 in 1989) and measles (from 481,530 in 1962 to 18,193 in 1989). Research has shown that savings from each dollar spent on polio and measles-mumps-rubella vaccinations range from $10 to $14.[3]
- *Infant Mortality Prevention*—Numerous studies indicate that early and regular prenatal care is associated with reduced infant mortality, prematurity, and low birthweight. One recent evaluation of the Special Supplemental Food Program for Women, Infant, and Children (WIC) found that for each dollar spent on nutritionally at-risk pregnant women and infants, spending on the Medicaid program fell by between $1.77 and $3.13 during the first 60 days after birth.[4]
- *Breast and Cervical Cancer Screening*—Controlled intervention trials show that screening 66 to 80 percent of women for breast cancer every one to two years will reduce breast cancer mortality by 30 percent. Papanicolaou ("Pap") test screening is an effective method of reducing cervical cancer mortality and morbidity; case-control studies have shown that screened women are two to ten times less likely to develop cervical cancer than those not screened.[5]
- *Smoking Cessation*—Over 40 controlled clinical trials have examined various combinations of smoking cessation counseling, educational literature, and nicotine replacement therapy. Studies have shown that these efforts can succeed in helping up to 40 percent of smokers quit.[6]
- *Physical Fitness and Healthy Diets*—Research shows that regular physical activity can help prevent or manage coronary heart disease, hypertension, non-insulin dependent diabetes, osteoporosis, and obesity. People who are active have lower rates of colon cancer and stroke, as well as fewer back injuries. Moreover, changes in diet have been shown to reduce the risk of cardiovascular disease and stroke.[7]
- *Injury Prevention*—The potential savings from reducing injuries, net of the cost of injury control programs, is in the billions of dollars for interventions for which data are available. Substantial injury reduction has been found for the use of air bags, raising the legal age for driving to 17, and motorcycle helmet laws.[8]
- *Access to Primary Health Care*—Comprehensive primary health care services include diagnosis and treatment as well as education designed to encourage healthy behavior. Recent studies have shown that increased access to primary care services in low-income communities improved health and reduced use of emergency services.[9]
- *Family Planning*—A 1985 study by the Institute of Medicine found that "the reduc-

tion in infant mortality in the United States over the past 20 years is due in part to effective family planning."[10]

The budget recognizes those interventions which "work" and includes funding increases for them. Interventions that will help ensure a healthy next generation are included, as are those with more immediate benefits. For those promising interventions for which there is not yet evidence of effectiveness, the budget includes evaluation funding.

The Federal Government shares responsibility with other sectors of our society, including state and local governments, private industry, and individual members of society, in fostering true preventions—those that "work." Like these sectors, the Federal Government seeks to focus its resources on preventive interventions that will most effectively reduce the leading causes of death and illness shown on Table B–2. The Federal Government also has a special responsibility to target its resources to the neediest Americans.

Funding increases are requested for:

- *Immunizations*—The budget will increase Federal support for Centers for Disease Control (CDC) categorical immunization grants by $40 million, an 18.3 percent increase over the 1991 enacted level (see Table B–3).[11] In addition, other Federal programs also are used to purchase immunizations, many of them for low-income children. Total Federal resources available for purchasing immunizations will increase by 10 percent to $1.1 billion.
- *Targeted Infant Mortality Prevention*—The budget increases Federal support for infant mortality prevention activities by $676 million Governmentwide, an increase of 9.2 percent over 1991 enacted levels (see Table B–4). Of this, $223 million is for WIC, to enable further increases in participation, as shown on the following chart.

A substantial portion of 1992 WIC participation will rely on the nearly $530 million in rebates that State WIC agencies receive from manufacturers of infant formula annually. Over the past several years, States have expanded WIC participation through competitive bidding for infant formula; in 1991, these rebates will lower the average price of a can of infant formula to State WIC programs from about $2.05 to $0.75—or by $1.30 per can. In 1992, competitive bidding will support over 1,000,000 participants each month, over one-fifth of WIC's total expected caseload of 4.9 million participants per month.

Selected spending categories (non-add):				
Nutrition	*1,930*	*2,127*	*2,351*	*2,754*
Smoking cessation	—	—	*2*	*4*
Drug abuse prevention	*52*	*107*	*123*	*128*
Surveillance	*6*	*33*	*44*	*51*

Although the U.S. infant mortality rate reached an all-time low of 9.9 deaths per 1,000 live births in 1989, the rate of progress has slowed during the last decade. Infant mortality is most severe in some of the Nation's cities, several of which have infant mortality rates rivaling those of developing nations. More troubling is that the infant mortality rate for black babies is more than twice the rate for white babies.

Recognizing that infant mortality is most severe in certain cities and communities, the budget is launching a new $171 million program of infant mortality prevention which will target efforts to 10 cities with exceptionally high rates of infant mortality. By supporting additional prenatal care in existing health clinics in hard-hit areas and helping local communities support new clinics where none exist now, this $171 million initiative will target Federal resources to areas most in need and where the greatest returns can be reaped. To get an early start on this new initiative, the Department of Health and Human Services expects to devote $57 million to this special effort from current appropriations.

The budget proposes to raise the Medicaid medically needy income level for pregnant women and young children. States would have the option to expand Medicaid coverage to pregnant women and children under six who "spend down" to the categorical eligibility level (currently 133 percent of the poverty level). This proposal is estimated to increase federal expenditures by $5 million in 1992 and $160 million from 1992 to 1996. With greater access to the health care delivery system, these pregnant women are more likely to deliver healthier babies.

- *Breast and Cervical Cancer Prevention*—The budget increases Federal support for breast and cervical cancer screening for

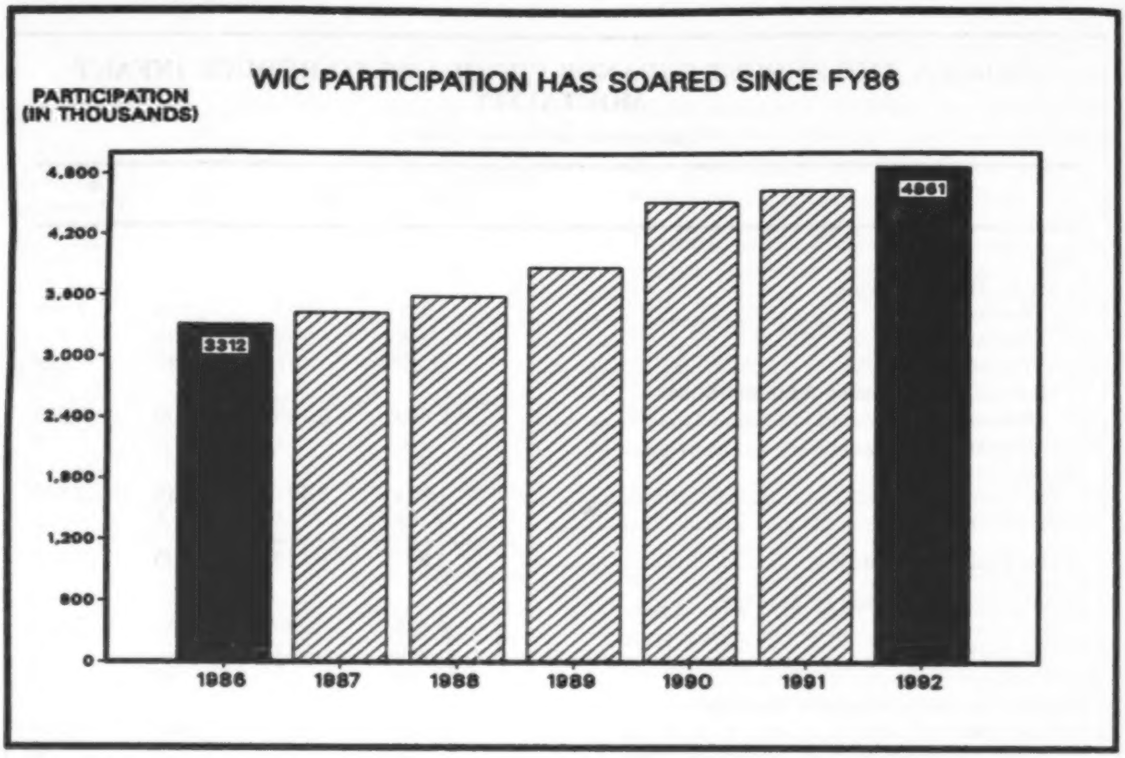

Table B–5. THE BUDGET SUPPORTS BREAST AND CERVICAL CANCER PREVENTION

(Obligations in millions of dollars)

	1990	1991	1992 Proposed
HCFA (Medicare and Medicaid)	30	230	350
PHS (CDC Screening Grants and NIH Research and Education Activities	14	39	60
Total Federal	44	269	410

low-income women and the uninsured by $141 million, an increase of 52 percent over the 1991 enacted levels (see Table B–5). This increase includes an additional $21 million for state grants to provide breast and cervical cancer screenings for low-income uninsured women, a 72 percent increase over the 1991 enacted level. With the recent enactment of the Omnibus Budget Reconciliation Act of 1990 (OBRA 1990), Medicare now covers mammography screening for Medicare-eligible women. An estimated 4 million women will benefit from this expansion in 1992, which will help reduce the number of deaths from breast cancer through early detection while avoiding unnecessary suffering.

- *Smoking Cessation*—The budget increases support of smoking cessation by $7 million over 1991 enacted levels (see Table B–6). This will double funding for CDC's Office of Smoking and Health, which will enable CDC to expand its smoking cessation education activities for specific target populations (e.g. low-income persons, teenagers).

Table B–6. THE BUDGET INCREASES SUPPORT FOR SMOKING CESSATION

(Obligations in millions of dollars)

	1989	1990	1991	1992 Proposed
HHS: NIH and ADAMHA (Evaluation of smoking cessation interventions, health effects of smoking)	74	80	85	89
CDC (Prepare Surgeon General's report, support national information campaign)	4	5	5	8
Total Federal	78	85	90	97

Table B–7. THE BUDGET WILL HELP TO PROMOTE PHYSICAL FITNESS AND HEALTHY DIETS

(Obligations in millions of dollars)

	1989	1990	1991	1992 Proposed
HHS:				
FDA (Shellfish safety)	23	24	34	49
CDC (School Health Education Activities)	35	46	51	51
OASH (President's Council on Physical Fitness, ODPHP)	6	7	6	6
NIH (Exercise and Fitness Research)	27	28	31	33
Total Federal	91	105	122	139

- *Physical Fitness and Healthy Diets*—The budget increases Federal funding for health education, disease prevention, and physical fitness activities (see Table B–7). In addition, the Departments of Health and Human Services and Agriculture recently published updated dietary guidelines that include important information to help Americans reduce their incidence of cancer, heart disease, etc. In a companion action, the Food and Drug Administration (FDA) is working on revised nutrition labels that will contain improved information about fat and cholesterol, vitamins and minerals, dietary fiber, and calories. FDA will also propose new labels for fresh seafood and vegetables. In addition, the budget proposes to improve and expand Federal regulation of seafood, particularly high-risk shellfish, to prevent potential illness from seafood harvested from contaminated waters. For a complete discussion of this initiative, see Chapter IX.C.
- *Injury Prevention*—Recognizing the importance of injury prevention activities such as seat belt research and education and highway and aviation safety, the budget proposes to increase Federal support of injury prevention by $224 million (see Table B–8). This 13 percent increase over 1991 enacted levels includes a $218 million increase for Department of Transportation funding of highway, aviation, and maritime safety and injury prevention activities. The budget also includes an additional $2 million in HHS to develop information campaigns aimed at increasing the use of child safety seats, seat belts, helmets, and other protective equipment and to highlight the role of alcohol in injury prevention among certain high risk groups (e.g. teenagers).

Table B–8. THE BUDGET SUPPORTS PREVENTION OF INJURIES

(Obligations in millions of dollars)

	1989	1990	1991	1992 Proposed
HHS/Public Health Service (Primarily CDC Injury Prevention Grants and NIH Research)	46	49	58	62
Transportation (Safety-related funding: NHTSA, FAA, Coast Guard)	1,401	1,527	1,588	1,806
Consumer Product Safety Commission	35	35	37	39
Total Federal	1,482	1,611	1,683	1,907

- *Improving Access to Primary Care Health Services*—To put primary health care services within the reach of people who currently do not have adequate access, the budget includes an additional $616 million for programs that support primary and preventive health care (see Table B–9). Additionally, Federal Medicaid expenditures for pregnant women, infants, and children will increase by an estimated $270 million in 1992 due to expansions enacted in OBRA of 1990. These expansions include continuous Medicaid eligibility for infants below 133 percent of poverty and phased-in Medicaid coverage of all poor children. Also included is a new outreach program to bring more low-income children into Medicaid.

- *Family Planning*—Recognizing the importance of these services, the budget contains an additional $21 million for HHS family planning grants and Federal Medicaid payments, a 5.3 percent increase (see Table B–10).

- *Preventing Lead Poisoning in Young Children*—The budget includes an additional $33 million for lead poisoning prevention, a five-fold increase over current Federal efforts (see Table B–11). HHS will award $15 million in grants to assist states identify low-income children at risk of lead poisoning through screening and refer children with high blood levels for medical treatment. To prevent children from returning to contaminated environments, the budget request for the Department of Housing and Urban Development also proposes to assist low- and moderate-income private residential property owners abate lead-based paint by providing $25 million annually, for four years, in grants to States and localities. States and localities will administer low-interest loans to homeowners with young children living in high-risk dwellings (homes with peeling, chip-

Table B–9. THE BUDGET EXPANDS PRIMARY/PREVENTIVE HEALTH

(Obligations in millions of dollars)

	1989	1990	1991	1992 Proposed
HHS:				
PHS (Community/Migrant Health, Maternal and Child Health Block Grant, Homeless Health Care, Preventive Health BG)	1,135	1,180	1,260	1,346
HCFA (Medicare and Medicaid)	3,085	3,470	4,150	4,680
Total Federal	4,220	4,650	5,410	6,026

Table B–10. **THE BUDGET INCREASES SUPPORT FOR FAMILY PLANNING**
(Obligations in millions of dollars)

	1989	1990	1991	1992 Proposed
Public Health Service Family Planning Grants	138	139	144	150
HCFA: Medicaid	195	230	255	270
Total Federal	333	369	399	420

ping, or otherwise defective paint). The budget also includes $500,000 in grants to support inter-agency cooperation and development within State and local governments.

- *Preventing Substance Abuse.*—As part of the $1.5 billion for substance abuse prevention in 1992, the budget includes an additional $51 million for programs in HHS and the Department of Education. HHS will administer $221 million in grants, a 13 percent increase over 1991, for community prevention networks and programs targeted to high risk youth and pregnant women. The Department of Education will distribute $50 million, twice the amount in 1991, for emergency grants to schools hit hardest by substance abuse. See Chapter V.B for a complete discussion of the substance abuse initiatives in the budget.

To ensure that Federal investments are getting the highest possible payoffs, increases in funding for evaluation are included in the budget. These include:

- *Immunizing Young Children from Low-Income Families*—Although over 95 percent of all children entering school have received their immunizations, immunization levels among 2–3 year olds from low-income urban families may be as low as 50–70 percent. To ensure that low-income children receive Federal immunization support, the budget includes a $10 million infant immunization initiative to investigate and evaluate the potential effectiveness of linking eligibility for participation in low-income assistance programs (WIC, Medicaid, AFDC) with documented immunization of young children.
- *Infant Mortality: Measuring Progress and Enhancing Accountability*—An integral part of the $171 million infant mortality initiative targeted to 10 cities with exceptionally high rates of infant mortality will be a comprehensive evaluation and monitoring component. As a part of this initiative, grantees in the 10 cities will set specific goals for reducing infant mortality. The budget includes funds to assess the progress of grantees in reducing infant mortality, and to assist grantees that do not meet those goals.
- *Smoking and Pregnancy*—The relationship between smoking and infant mortality is

Table B–11. **THE BUDGET WILL HELP PREVENT LEAD POISONING**
(Obligations in millions of dollars)

	1990	1991	1992 Proposed
HHS (CDC Lead Screening Grants)	4	8	15
HUD (Lead Paint Abatement in High-Risk Homes)	—	—	26
Total Federal	4	8	41

well-documented; an estimated 10 percent of infant deaths and 25 percent of low-birthweight infants are attributable to smoking during pregnancy. To integrate smoking cessation efforts into the overall delivery of prenatal care services better, the budget includes $3 million in demonstration grants through the Maternal and Child Health Block Grant.

- *Making HIV Prevention More Effective*—Although funding for HIV prevention activities has grown from $484 million in 1989 to $637 million in 1992 (an increase of over 30 percent), the effects of the myriad Federal, state, and local HIV prevention activities have not yet been well documented. To increase understanding of the effect that prevention efforts are having in slowing the spread of HIV, and to identify improvements that can be made to strengthen existing efforts, the budget will continue to emphasize evaluation of HIV prevention projects.
- *Improving Our Understanding of Head Start*—Research shows that Head Start children experience substantial immediate gains in cognitive growth, school readiness, and achievement but that these results apparently lessen over time. Also, the impact of the wide range of available Head Start services is not well understood. The budget places a priority on evaluation and research projects designed to assess the effect of individual Head Start service components and alternative program configurations.
- *Studying the Effects of WIC on Children*—While several studies describe WIC's effects on pregnant women and newborns, there are currently few measurements of the effect WIC has on children. To learn more about the effects on children aged one to five, the budget continues funding for the "WIC Child Impact Study," which began in 1990. The study should produce preliminary results in 1993.

While the Federal contribution to this effort is sizeable, it is only part of the story, the balance of which includes:

- **States,** which spend billions of their own funds for public health activities (an estimated $6.6 billion in 1988), and for the Federal-State financed Medicaid program (an estimated $31 billion in State funds in 1990). States also spend approximately $10 billion per year on AFDC benefits, and large sums on education programs (over $159 billion in 1988).
- **Local governments,** which spent an estimated $2.3 billion for public health activities in 1988.
- **Employers,** which paid $135 billion in private health insurance premiums, a portion of which was for preventive services.
- **Health insurers,** which paid $155 billion in benefits, some of which supported preventive services.

The focus of this entire initiative is on individual behavior and personal responsibility. The pieces of the initiative are intended to be sensitive to private prerogatives, using education and access to enable individuals to take actions to improve their own health. By fostering a climate of personal responsibility, America can take large steps toward meeting the national goals of healthy, productive lives for all citizens.

This initiative is one of a number within the budget which expressly favor the interests of the next generation. Government-wide funding for children is projected to rise from $79.3 billion in 1991 to $86.9 billion in 1992 as shown on Table B–12.

Spending just for mandatory programs will increase by 38 percent over 1992–1996 (see Table B–13).

Table B–12. SPENDING ON SELECTED PROGRAMS SERVING CHILDREN INCREASES 9.5 PERCENT IN 1992

(In millions of dollars)

IV.C. ENHANCING RESEARCH AND DEVELOPMENT AND EXPANDING THE HUMAN FRONTIER

Since the beginning of civilization, mankind has sought to explore the frontier and increase its knowledge of the world. Today's frontiers are in space, communications, transportation, energy, manufacturing and materials, and biotechnology. This chapter discusses a range of programs and issues that are related to these frontiers: Federal research and development activities; space; and biotechnology. These endeavors are among America's most important investments in the future.

The budget proposes to allocate about $76 billion for *research and development*, including R&D facilities, in 1992. This is an increase of over $8 billion, or 13 percent over 1991 levels. Within this total, the budget proposes over $13 billion for basic research, an increase of $1 billion, or 8 percent, over 1991.

The budget also proposes to allocate over $16 billion for major *space activities*. This is an increase of $2 billion, or 15 percent, over 1991 enacted levels.

The budget proposes several crosscutting investments that will build the base for the continuing expansion of the frontier of knowledge:

Table C–1. **ENHANCING RESEARCH AND DEVELOPMENT AND EXPANDING THE HUMAN FRONTIER—HIGHLIGHTS**

(Dollar amounts in millions)

	Budget Authority			
	1991 Enacted	1992 Proposed	Dollar change	Percent change

Mission From Planet Earth	2,199	2,470	+271	+12
Expanding the Human Frontier through Biotechnology	3,788	4,107	+319	+8

a new initiative to advance America's high performance computing capacity; an increased emphasis on mathematics and science education; and a further installment in the U.S. effort to lead the world to a greater understanding of global change.

Lastly, the budget proposes to allocate $4.1 billion as the Federal investment in *biotechnology*. This is an increase of $319 million or 8 percent over 1991 enacted levels.

HIGHLIGHTS

The budget contains a number of new and expanded programs and initiatives. Examples include:

BASIC RESEARCH

An 18 Percent Increase for the National Science Foundation (NSF).—The budget proposes an increase of 18 percent overall for NSF, including a 16 percent increase for basic research. This will continue the Administration's commitment to double NSF's budget between 1987 and 1994. This increase is targeted primarily toward individual investigators at universities, who are essential to the U.S. scientific enterprise. In addition, a new program is proposed to provide state-of-the-art research instrumentation to academic researchers.

Increasing the Investment in Basic Biomedical Research at the National Institutes of Health.—The budget proposes an increase of $334 million, or 7 percent over 1991, for basic research supported by the National Institutes of Health (NIH). The overall increase of $498 million for all of NIH would allow an increase of 9 percent in funding of research project grants. This would permit over 600 additional grants to be funded.

Human Genome Project.—The budget proposes an increase of $35 million, or 26 percent, to a total of $169 million in the Departments of Energy and Health and Human Services (National Institutes of Health).

National Agricultural Research Initiative.—The budget proposes a 71 percent increase ($52 million) to a total of $125 million as the next installment in a new program in agricultural research, which will be competitive, based on merit, and designed to enhance production efficiency, food safety and environmental quality.

Superconducting Super Collider (SSC).—The budget proposes a $291 million increase for the SSC to a total of $534 million. This will support continued work toward the transition from prototype superconducting magnets to production and to begin construction of facilities. The funding level maintains the 10-year design and construction schedule.

APPLIED RESEARCH AND DEVELOPMENT

High Performance Computing and Communications.—The budget proposes an increase of $149 million, or 30 percent, (to a total of $638 million) for a new interagency program to help establish American pre-eminence in the fields of high performance computing and communications. This major initiative, involving eight Federal agencies (in addition to the private sector), will focus on the underlying research and the academic training needed to significantly accelerate the availability of the next generation of high performance computing systems and digital communications networks. The goal is to assist in the development of computing capability with roughly 1,000 times improvement over current systems by 1996.

Energy R&D.—The budget proposes an increase of $227 million, or 34 percent for investments in targeted high-payoff technologies and strategies to increase the efficiency of energy use, to develop alternatives to petroleum and to advance new electricity technologies. This investment is guided by the National Energy Strategy.

Advanced Manufacturing and Materials R&D.—The budget includes over $1 billion for R&D on advanced manufacturing technologies, including an increase of 15 percent for nondefense-related manufacturing R&D. In addition, the budget proposes $84 million for the

National Science Foundation for a new initiative in materials synthesis and processing, which will take advantage of new opportunities in electronic and biomaterials. The budget also proposes $93 million for R&D on all aspects of superconductivity.

HIV/AIDS.—The budget proposes a 5 percent increase to $1.2 billion for biomedical and behavioral research on Human Immunodeficiency Virus/Acquired Immune Deficiency Syndrome. (The budget also proposes a total increase of $558 million, or 15 percent, for HIV/AIDS research, treatment, prevention and income support.)

Aeronautics R&D.—The budget proposes an increase of $61 million, or 13 percent, for aeronautics R&D in NASA, not including high-performance computing. The increase will support continued high-priority R&D on environmental issues associated with supersonic flight, as well as a new initiative in high-temperature propulsion materials. This work is intended to enable an informed decision by industry on future high-speed civil transports. In addition, a new program to address the phenomenon of aging aircraft will be initiated. Technology development for the joint NASA/DOD National Aerospace Plane program will be continued, leading to a future decision on a flight research vehicle.

Expanding R&D at the National Institute of Standards and Technology.—The budget proposes a 15 percent increase to a total of $248 million for NIST. The long-term budget projection will result in a budget for NIST that is approximately doubled by 1996. The 1992 proposal will continue an effort begun in 1991 to expand NIST's ability to perform generic applied research and technology development and to address a growing number of important standards and measurement issues. In addition, the budget proposes $36 million for the Advanced Technology Program.

Defense R&D.—The budget proposes a total of $43 billion for R&D for national security. This amount includes more than $40 billion for R&D supported by the Department of Defense, and nearly $3 billion for defense-related R&D supported by the Department of Energy.

R&E Tax Credit.—The budget proposes to make the Research and Experimentation tax credit permanent, and to reformulate the credit to increase its effective rate.

Encouraging R&D by Multinational Companies.—The budget proposes a 1-year extension in the rules for allocation by multinational companies of R&D expenditures incurred outside the U.S.

SPACE EXPLORATION

Space Transportation Infrastructure.—The budget proposes $5.5 billion, an increase of 15 percent, for the critical elements of space transportation, including the Space Shuttle and expendable launch vehicles. The budget also proposes a major new program, jointly funded by NASA and DOD to develop a new launch system. This new capability was recommended by the Advisory Committee on the Future of the U.S. Space Program.

Space Science.—The budget proposes $2.1 billion, an increase of $367 million, or 21 percent, over 1991. This will support a broad range of space science activities, including astronomy, unmanned planetary exploration, advanced space communications research, and life sciences. These increases are consistent with NASA's space science strategic research plan and the recent recommendations of the Advisory Committee on the Future of the U.S. Space Program.

*Mission **to** Planet Earth and the U.S. Global Change Research Program (USGCRP).*—The budget proposes a total of $1.2 billion for the USGCRP, a $232 million or 24 percent increase over the 1991 enacted level. The 1992 increase will be used to continue a broad range of research efforts, including NASA's Mission to Planet Earth/Earth Observing System (EOS) and high priority, ground-based programs such as the World Ocean Circulation Experiment. EOS is a program designed to develop and fly a number of Earth-orbiting instruments that will collect important data from space on critical global change issues such as global warming, deforestation and desertification. During 1991, an external engineering review will be conducted on the implementation of the EOS program.

*Mission **from** Planet Earth.*—The budget proposes a total of $2.5 billion, a 12 percent increase, for activities that will eventually lead to exploration of the Moon and the planets, including Space Station Freedom. In 1992, activities will focus on continued development of the Space Station and increased investments in long-lead exploration technologies such as nuclear power, nuclear propulsion and life support.

BIOTECHNOLOGY

The budget proposes nearly $4 billion for biotechnology R&D.—Biotechnology offers unprecedented opportunities for improving the Nation's health, food supply and environment. In medicine, biotechnology is responsible for a generation of new products that will prevent and treat disease. Significant agricultural advances and environmental techniques are also underway. Twelve Federal agencies are working on biotechnology-related R&D and are developing priorities for future Federal investments.

ENHANCING RESEARCH AND DEVELOPMENT

Research and development (R&D) yields new knowledge, products and processes that, over the long term, result in economic growth and an improved quality of life for all Americans. Investment in research and development is a top priority for an Administration that believes in investing in the future. Investments in research and development form the foundation for the exploration of all of the new frontiers of today and tomorrow.

It is not possible to determine analytically the "optimal" level for total national investment in R&D or the best mix of R&D investments. However, the evidence that increased R&D investment adds to the productivity of the Nation, and that Federal investments are important, provides ample justification for increased Federal investment in R&D as well as for Federal action to increase the level of private R&D investment.

BACKGROUND: INCREASED INVESTMENTS IN R&D PROVIDE BENEFITS TO THE NATION

R&D investment provides both direct and indirect productivity benefits to society. In addition to the economic benefits associated with R&D, many studies suggest that private (industrial) R&D spending has a very high social rate of return. This social return appears to be much higher than the rate of return to the individual company funding the R&D, giving R&D spending the character of what economists call a "public good." One researcher estimated a social rate of return of 56 percent and a private rate of return of 25 percent for a specific group of innovations. Several decades of econometric research have demonstrated that private sector R&D investments are a strong positive stimulus for private productivity. There is also evidence that Federal R&D spending stimulates private R&D. This appears to be especially true for basic research or pre-competitive, generic applied research that contributes to many industrial sectors.

THE 1992 FEDERAL R&D BUDGET: OVERVIEW AND TRENDS

The budget proposes to allocate about $76 billion for R&D, including R&D facilities. This is an increase of over $8 billion, or 13 percent, over 1991 levels. Within this total, $13 billion will be allocated for basic research, an increase of $1 billion, or 8 percent, and $12 billion for applied research, an increase of $903 million, or 8 percent, over 1991. Federal civilian R&D will increase by 10 percent while defense-related R&D will increase by 14 percent.

The ratio of Federal R&D outlays to GNP has been holding steady in recent years at about 1.2 percent, after a sharp drop in the 1970s due to the end of the Apollo project and slower growth in defense. During the 1980s, defense R&D recovered considerably. Federal civilian R&D (excluding defense and space activities) has been nearly level for 30 years at about 0.4 percent of GNP. The budget provides increases and incentives designed to increase Federal R&D investment as a percent of GNP.

Table C–2. THE BUDGET PROPOSES AN $8.4 BILLION INCREASE IN FEDERAL INVESTMENT IN RESEARCH AND DEVELOPMENT

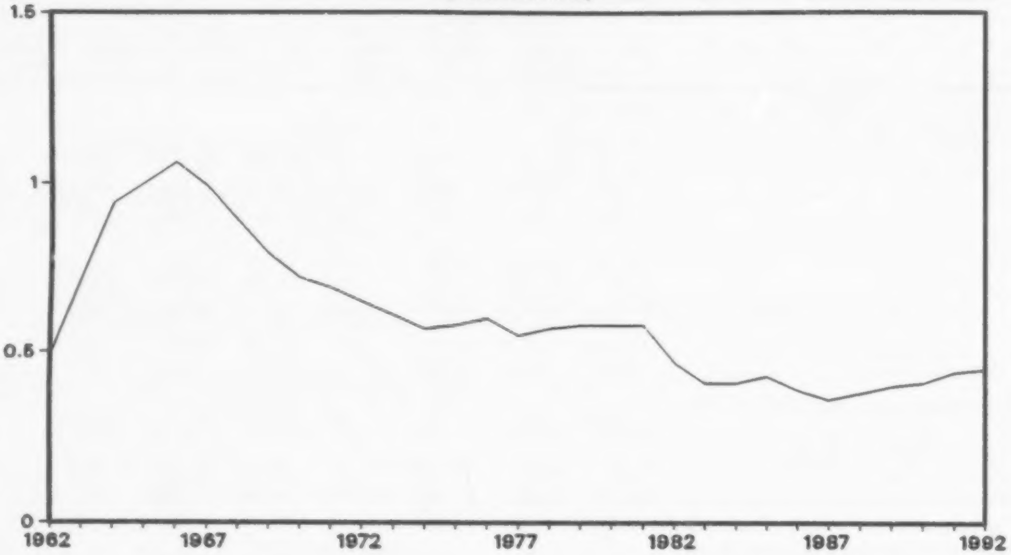
[2] Components may not add to totals because of rounding.

[3] Includes the Departments of Education, Justice, Housing and Urban Development, Labor, the Treasury, the Nuclear Regulatory Commission, Tennessee Valley Authority, Smithsonian Institution, and the Corps of Engineers.

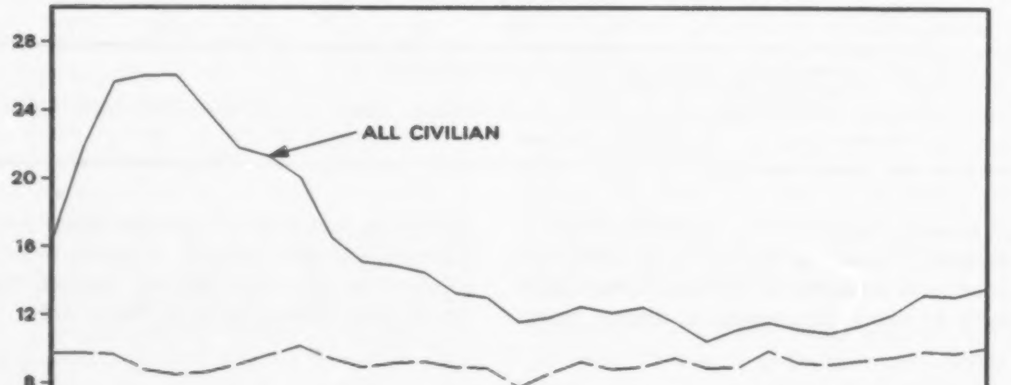
As a percentage of total Federal domestic discretionary spending, total civilian R&D has declined from a peak of 25 percent in the Apollo years to about 13 percent in recent years. Excluding space R&D, civilian R&D has remained relatively constant at about 10 percent of the domestic discretionary budget. Again, the budget seeks to increase this share.

THE 1992 BUDGET WILL INCREASE THE RATIO OF FEDERAL CIVILIAN RESEARCH AND DEVELOPMENT OUTLAYS TO GNP (OUTLAYS)



Sources: National Science Foundation, Office of Management and Budget.

THE BUDGET WILL INCREASE INVESTMENT IN CIVILIAN RESEARCH AND DEVELOPMENT AS A PERCENTAGE OF DOMESTIC DISCRETIONARY SPENDING



The Federal Government currently accounts for about 44 percent of the total U.S. investment in R&D. Industry, academia, and nonprofit organizations make up the remaining 56 percent. In 1991, it is estimated that total U.S. R&D expenditures, Federal and non-Federal, will be $152 billion, an increase of 4 percent over 1990, with Federal investments accounting for most of the increase. In total, the U.S. investment in R&D is about 3 percent of GNP. Trends in industry R&D funding, including initiatives to spur increased industry investment through the tax credit for research and experimentation, are discussed later in this chapter.

EXPANDING THE FRONTIER OF KNOWLEDGE THROUGH BASIC RESEARCH

Basic research provides the new knowledge that leads to new products and processes. Basic research, especially at universities, is an essential investment in the Nation's scientific and technological future, including its future scientists and engineers. For this reason, the budget places a major emphasis on increasing basic research. In total, the budget proposes an increase of 8 percent, or $1 billion, above 1991 for Federal basic research support.

The strength of U.S. investment in basic research is illustrated by several recent achievements:

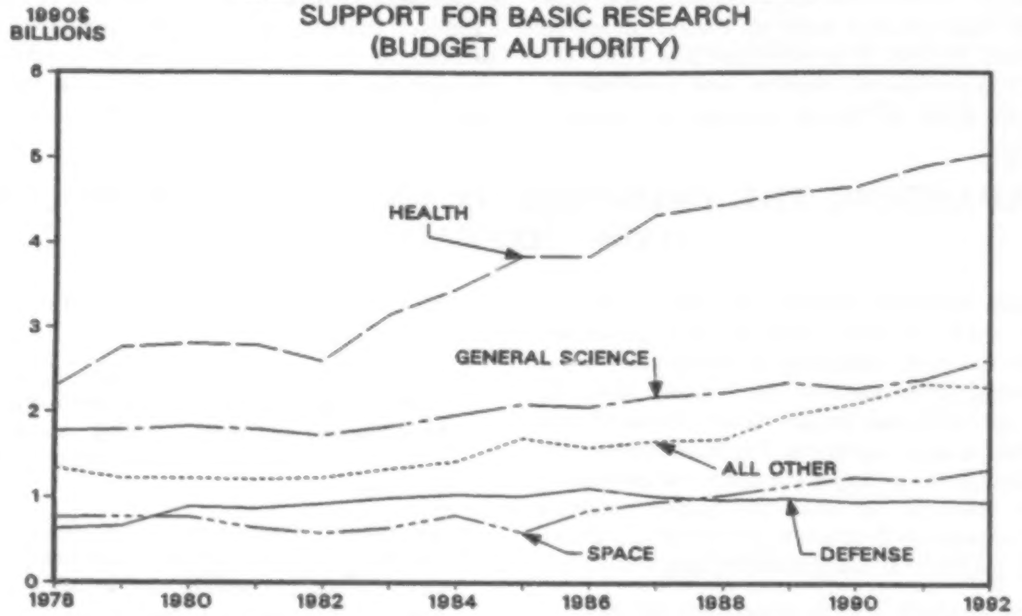
- The NASA/NOAA Antarctic Ozone Expedition, combining satellite, aircraft, and ground-based research, discovered and documented the problem of the "ozone hole" in the Antarctic, and is currently investigating similar phenomena in the Arctic environment.
- An NSF-supported Presidential Young Investigator discovered a way to make large-pore molecular sieves. These molecular sieves are critical as catalysts for a wide variety of industrial processes, particularly petroleum processing and chemical separation. The new large-pore sieves have the potential to revolutionize the industrial processing of chemicals.
- NIH scientists successfully transferred genetically engineered cells to human subjects, paving the way for the world's first attempts at human gene therapy. The first gene therapy experiments involved placing a normal gene that helps the immune system develop normally into the white blood cells of a young girl who lacked this vital gene. It is hoped that this inserted gene will enable the formation of a working immune system.
- NASA's Cosmic Background Explorer made unprecedented measurements of background radiation, giving scientists critical new evidence on the origin of the universe.
- Biomedical researchers have discovered the long-sought gene for cystic fibrosis, a fatal disease of children and young adults, opening the way to a host of new therapeutic approaches.

Key Indicators of the Vitality of Basic Research

Most basic research is performed in universities, and more than half of the R&D that universities perform is basic. The vitality of the "academic research enterprise" has been nearly impossible to measure. However, in recent years, scientists and policymakers have expressed serious concerns about its current and future vitality. Many experts argue that over the past several years, and despite large real increases in Federal funding, the activity level and research productivity of university researchers have not appeared to increase.

Funding Trends.—The historical trend in Federal support for basic research shows that during the 1980s such support increased overall by 50 percent in real terms, with significantly larger increases in health-related basic research. The figure below shows that real support for basic research has continued to climb in the early 1990's, particularly in health and space.

Measuring the Direct Economic Benefits.—Until recently, there has been no way



THE 1992 BUDGET PROPOSES EXPANDED SUPPORT FOR BASIC RESEARCH (BUDGET AUTHORITY)

Sources: National Science Foundation, Office of Management and Budget.

to gauge reliably the impact of academic R&D on industrial innovation.

Recent work (Mansfield), however, indicates that in several key industrial sectors, notably information processing, drugs and instruments, a significant proportion of new products and processes would not have reached the market had it not been for the contribution of recent academic R&D. A recent, but very preliminary, estimate of the average social rate of return to past investments in academic R&D was calculated to be 28 percent. It is important to note, however, that this figure must be viewed with caution as it is based on a large number of assumptions and simplifications.

In any case, the contribution of academic research to industrial innovation in several important sectors appears to be considerable, even apart from its more traditional benefits to the education of students, and to the acquisition of knowledge for its own sake.

Support for University Researchers.— One indicator of the Federal Government's commitment to research is the total number of research grants made to individual researchers, a figure that has been growing for two decades. Since most grants are for periods ranging from 2–7 years, in any given year only a portion (less than 25 percent) of an agency's grants are competitively renewed, or become, for that year, "new grants". Thus, rather than using the number of total grants as an indicator, some advocates prefer to use a measure based on just this "new grant" ratio. This indicator, or "funded rate of new grants" is defined here as the number of awards as a percent of the number of proposals. By this measure, the funded rate for new grants for the two largest Federal supporters of university research, the Department of Health and Human Services (National Institutes of Health) and the National Science Foundation, have declined over the 1980's from about 40 percent to about 30 percent (adjusted to exclude both multiple submissions by any one individual and for awards for research centers, which may serve many investigators).

A partial explanation may be that since 1970, for HHS, the total pool of biomedical researchers (extramural) has grown by 140 percent, outpacing the 75 percent growth in principal investigators funded by HHS. In fact, it has been estimated that about 80 percent of all the American scientists in all fields who ever lived are alive today.

Funding rates for new grants have also dropped because of increases in the amount of money per grant (both direct and indirect cost components) and the average length of grants. Increasing award sizes, award lengths, or both, may tend to provide increased stability and productivity for a given investigator, but these actions also depress the number of subsequent new grants that are made.

While individual investigator awards are still the predominant form of support, awards to groups of investigators (either small groups or larger centers) have been increasing, driven primarily by the need for interdisciplinary approaches to scientific problems. Each of these group or center awards is counted as a single grant, even though many researchers may be served. Thus, considering only the absolute numbers of awards is somewhat misleading. A more appropriate consideration should be the total number of researchers supported. By this measure, there are many more researchers supported by research grants today than at any previous time.

Although support for university researchers is most often cited as the key indicator of the health of overall Federal support for basic research, a number of other measures that have traditionally been used to measure research output (new knowledge). None of these is, by itself, a definitive indicator of the vitality of academic research, and none is universally accepted as an adequate output measure, since the "amount" of new knowledge contained in a research finding has no natural unit of measure. Taken together with information on support for researchers, these measures provide some insight into the overall strength of academic research. Several such measures are (1) numbers of publications, (2) "quality" of publications as measured by citation indices, (3) patents and (4) Nobel and other prizes.

Publications and Citations.—As an indicator of overall productivity, the number of science articles published by U.S. academic researchers (which produce about two-thirds of all U.S. science and engineering articles in major journals) has increased markedly. By this measure, the U.S. is maintaining its large share of world scientific and engineering literature. In all fields, the U.S. has a greater percentage of world publications than does any other country.As an indicator of the impact that publications have on other research, citation data are often used. The level of citation of U.S. papers by foreign researchers suggests that U.S. researchers continue to exert a substantial impact on foreign publications, and thus on the world's store of scientific knowledge.

Patents.—University patenting increased greatly during the 1980s, due in part to the 1980 change in U.S. law that allowed universities and small businesses to retain title to inventions developed with Federal funds. U.S. universities received 2 percent of patents awarded to U.S. inventors in 1988, more than double the share in 1978.

Nobel and Other Major Prizes.—The U.S. continues to dominate the Nobel lists, and Americans often win other major, internationally-recognized prizes such as the Fermi Award in physics, the Wolf Award in chemistry and the Lasker Award in medicine. However, care must be taken with this measure as these selections are often made on the basis of research done many years (10–30) before. Thus, this indicator may have more value with respect to past support for research than present or future support.

The budget recognizes that support for principal investigators is an important measure of the vitality of the Nation's basic research effort. Thus, this support is the major theme underlying the initiatives in basic research proposed for 1992.

1992 Budget Initiatives in Basic Research

The budget proposes a number of major increases or new programs reflecting the President's support for basic research. These increases are intended to bolster basic research funding, especially that which supports individual investigators, and to provide those researchers with state-of-the-art equipment. Overall, the budget proposes over $13 billion for basic research, an increase of $1 billion, or 8 percent, over 1991.

Table C–3. THE BUDGET INCREASES FUNDING FOR BASIC RESEARCH[1]

(Dollar amounts in millions)

Department or Agency	Budget Authority				Outlays			
	1991 Enacted	1992 Proposed	Dollar change	Percent change	1991 Enacted	1992 Proposed	Dollar change	Percent change
Health and Human Services	5,101	5,477	+376	+7	4,786	5,097	+311	+7
(National Institutes of Health)	(4,634)	(4,968)	(+334)	(+7)	(4,372)	(4,622)	(+250)	+6
National Science Foundation	1,719	1,987	+268	+16	1,560	1,784	+223	+14
Energy	1,726	1,759	+32	+2	1,650	1,654	+3	—

Total	12,320	13,320	+1,000	+8	11,597	12,414	+818	+7

[1] Amounts reported in this table are included in totals for conduct of R&D.

[2] Includes the Departments of Interior, Commerce, Veterans Affairs, Education, Labor, the Treasury, Justice, the Agency for International Development, the Smithsonian Institution, Environmental Protection Agency, Tennessee Valley Authority, and the Corps of Engineers.

Doubling Basic Research Support Through the National Science Foundation.—The President remains committed to doubling the budget of the National Science Foundation (NSF) between 1987 and 1994. The budget proposes an overall increase of 18 percent, which would restore the doubling path for NSF. Over 70 percent of NSF's budget supports basic research, primarily at the Nation's colleges and universities. These funds go directly, through a competitive, merit-based process, to the best researchers and to the most talented young scientists and engineers. Individual investigators are a key element in maintaining the U.S. preeminent position in science and basic research. NSF also plays a major role in the governmentwide initiative to improve the quality of science, mathematics and engineering education, particularly at the pre-college level.

In addition to the large proposed increase aimed primarily at individual investigators, $50 million is proposed to fund a new initiative to provide new, state-of-the-art instrumentation to university researchers. This initiative will be implemented through a competitive, merit-based program, and will be targeted toward instrumentation costing more than $200,000, but less than $4 million. The Federal funding for this initiative will be matched at least 50:50 by non-Federal sources.

Increasing the Investment in Basic Biomedical Research at NIH by 7 Percent.—The budget proposes a $334 million increase for basic biomedical research supported by the National Institutes of Health (NIH), the primary source of basic biomedical research discoveries in the world. The overall increase of $498 million, or 6 percent, for all of NIH will allow an increase of 9 percent in the funding for research project grants awarded to individual investigators. This will permit over 600 additional grants to be funded.

Unlocking the Secrets of Human Heredity—the Human Genome Project.—The budget proposes a 26 percent increase for the third year of this 15-year effort to decode the information locked in the chemical building blocks that form human genetic inheritance. This $35 million increase reflects a commitment to develop "maps" of human chromosomes and human DNA sequence data that will allow scientists to develop new diagnostic tests, therapies, or cures for some of the 4,000 known disorders in which genes are the dominant cause. Such diseases include cystic fibrosis, sickle cell disease, and muscular dystrophy. The genome project also will produce increased knowledge about how specific genes function and malfunction, and will help increase understanding of diseases characterized

best copy available

by gene-governed chemical reactions, such as heart disease, cancer, and AIDS.

This project is being conducted jointly by the Departments of Energy and Health and Human Services. The budget requests a total of $169 million for the project, $59 million at Energy and $110 million at Health and Human Services.

Concurrent with the project's efforts to advance the state-of-the-art in genetic "mapping," the project is also exploring safeguards that may be necessary as new genetic information is put to practical uses, addressing issues related to privacy of such information and fairness in its use.

This landmark project will allow the next generation to benefit from the knowledge gained through this investment. Future scientists will have tremendous amounts of new information about the structure of human genetic make-up available to assist them in their search for therapies and cures for the diseases that afflict this generation. The 1992 budget ensures that this project is able to forge ahead expeditiously.

Improving the Productivity of the Nation's Agriculture (the National Research Initiative).—The budget continues the commitment to the National Research Initiative (NRI), first proposed in the 1991 budget, by proposing $125 million, an increase of $52 million, or 71 percent, over the 1991 enacted level. In 1991, $100 million was proposed as the initial installment, to be expanded by $50 million each year to the extent that funds were awarded competitively and not earmarked for specific sites or institutions. Six categories of research will be funded: natural resources and the environment; nutrition, food quality and health; plant systems (including mapping of plant genomes); animal systems; markets, trade, and policy; and processes antecedent to adding value and developing new products.

Agriculture in the 1990s must emphasize the environment, more rational use of natural resources, the quality and nutrition of food, and economically stabilized production systems which benefit producers as well as consumers. The NRI responds to the major issues facing agriculture such as food safety, water quality, global climate change, pest management, scientific human capital development, and farm income. The NRI will allow U.S. agriculture to broaden the science and technology base to meet demanding needs and exploit new opportunities more effectively. These imperatives coincide with recent advances in biological sciences and other new tools in science that present unique research opportunities to improve agriculture nationally.

Federal funding for the NRI is necessary because: (1) the issues and opportunities are national in scope; the Nation as a whole is the beneficiary, not just individual states or industries; (2) the NRI undertakes research that does not, in general, produce specific patentable or marketable products, but knowledge that will be broadly applicable; (3) the need is urgent; the issues to be addressed require action now and cannot be delayed or taken up piecemeal; and (4) there are broader benefits, which are difficult to quantify, related to protection of the environment and public health.

The Administration is concerned about recent Congressional action which placed a cap of 14 percent on the recovery of indirect costs associated with grants made under the NRI. This action threatens the viability of the initiative.

Unlocking the Secrets of Matter and Energy—The Superconducting Supercollider and High Energy and Nuclear Physics:

- *The Superconducting Super Collider.*—The Superconducting Super Collider (SSC) will provide a collision energy 20 times greater than the current capability, resulting in new fundamental knowledge of matter and energy. The SSC Laboratory, under construction in Ellis County, Texas, will comprise a 54-mile circular tunnel in which superconducting magnets will accelerate counter-rotating proton beams. The SSC will employ 2,500 scientists, engineers, and technicians, and host an additional 500 visiting scientists.

  The budget provides $534 million for the SSC, an increase of $291 million over the 1991 level. Much of the current effort focuses on research and development of the superconducting magnets. Work on other SSC components is also progressing. The first segment of tunnel will be under construction by the end of 1992.

Even though the budget proposes a substantial increase for the SSC, this funding will not come at the expense of other science programs. In particular, the budget proposes a 16 percent increase in basic research, principally for individual investigators, at the National Science Foundation.

The total cost of the SSC has been estimated at $8.2 billion. One-third of the total is expected to be contributed by non-Federal sources. The State of Texas has committed up to $1 billion for construction of on-site facilities and other SSC systems, as well as the land required for the SSC laboratory.

Foreign partners are expected to contribute substantially to the construction and operation of the SSC, as well as to the experimental program. During 1992, follow-up delegations will continue discussions already underway with Japan, Korea, Europe and Canada.

The SSC holds the potential for new breakthroughs in science, technology and education. Although the primary purpose of the SSC is to acquire new knowledge, such knowledge has always resulted in developments in technology and practical products which profoundly affect the quality of life for all Americans and which enhance the economic competitiveness of the Nation. U.S. world leadership in high energy physics will be maintained far into the next century by the scientific and technological advances emanating from the SSC.

- *High Energy and Nuclear Physics.*—Research in high energy and nuclear physics is directed at understanding the nature of matter and energy at the most fundamental level and the basic forces which govern all processes in nature. Much of the research program is aimed at verifying and explaining the particles, or "building blocks", that comprise the interior of atoms and the forces acting on them.

Research is conducted at universities and national laboratories. Experiments usually involve controlled collisions between particles travelling at speeds approaching the speed of light and examination of the interactions that occur.

Existing high energy accelerator facilities include the Tevatron at Fermi National Laboratory near Chicago, the Stanford Linear Collider at Stanford University in California, and the Alternating Gradient Synchrotron at Brookhaven National Laboratory on Long Island. Improvements to the Tevatron will be completed in 1992 which will greatly enhance the capability of the machine. Additional improvements in the form of a new Main Injection Ring at Fermilab will be initiated in 1992.

Construction will continue on two nuclear physics facilities. The Continuous Electron Beam Accelerator Facility in Newport News, VA is on schedule and nearing completion. At Brookhaven National Laboratory, construction is well underway on the Relativistic Heavy Ion Collider.

Total	1,149	1,549	+400	+35

APPLIED R&D: EXPANDING THE FRONTIER OF TECHNOLOGICAL DEVELOPMENT

Traditionally, the Federal Government has supported a broad spectrum of applied civilian R&D in support of agency missions. Unlike basic research, where the Federal role has bee stable and widely acknowledged, the appropriate Federal role in applied civilian R&D has been the subject of debate and has changed significantly over time. Past Federal investments in civilian R&D have led to major technological advances (e.g., computers, new aircraft) while others have been major failures (e.g., synfuels plants).

The Administration believes that appropriate Federal investments in applied civilian R&D can result in high payoff to the economy, and the budget provides for R&D funding increases across a wide range of technology areas. In total, the budget proposes about $17 billion, an increase of $1.5 billion or 10 percent.

The principal strategy for the Federal applied civilian R&D programs is to invest in R&D areas that support agency mission requirements, but also where some of the R&D has broad applications in the private sector ("dual use" technologies), even though these commercial applications would not necessarily by funded by the government. In such cases, the Government's role is to support generic or enabling technologies at the pre-competitive stage of R&D:

- generic or enabling technologies have the potential to be applied to a broad range of products or processes across many firms;
- pre-competitive R&D is the stage of the R&D process where the results can be shared widely within and between industrial sectors, without reducing the incentive for individual firms to develop and market commercial products and processes based upon the results.

There are a number of different mechanisms that agencies may use to support generic applied research and technology development. These include: cost-sharing of individual projects; creation of R&D consortia (often involving government, industry and university laboratories; and more informal government/university/industry collaboration). Overall, the budget provides increased funding for all major civilian applied research and development areas.

Increased investments in applied civilian R&D will support technology development across a number of agencies and programs in support of both agency mission needs and a broad technology base for potential future commercial applications. This increased emphasis on federally supported technology development should not be confused with industrial policy. The Administration remains opposed to efforts to target specific industries (e.g., consumer electronics) for R&D assistance to develop new products (e.g., high-definition television).

1992 Budget Initiatives in Applied Research and Development

High Performance Computing and Communications.—The budget proposes $638 million for Federal support for R&D focused on high performance computing and communciations. High performance computing systems (i.e., hardware, software, networks, etc.) are likely to have a significant positive impact on productivity. For example, supercomputers have been credited with bringing the Ford Taurus, currently the best-selling American-made car, to market much sooner, with higher quality, and at significantly lower cost than would have been possible without them. While the supercomputer industry has grown from $89 million in worldwide revenues in 1980 to over $1.1 billion in 1990, it is still a very small market (less than one percent of the worldwide computer market) and traditionally limited to very complex public and private high-risk, high-return ventures (e.g., oil and gas exploration, defense and aerospace systems, etc.). A similar situation exists with high-capacity, high-speed digital networks. Because of the small scale of the market and the high-cost of research, high performance computing has not attracted the private sector R&D investments typically seen in the broader computer industry.

The Federal Government has played a significant role in the development of the supercomputer and network industry. A lead-

ing computer industry executive has stated that "If it weren't for the U.S. government, there would be no U.S. supercomputer industry." The role of government R&D in developing innovative computer technologies has its roots in the World War II research that became the foundation for the UNIVAC system. Many of today's commercial high performance computing system and network advances are attributable to research supported by Federal agencies.

Through the Office of Science and Technology Policy's Federal Coordinating Council on Science, Engineering, and Technology (FCCSET), eight agencies have developed a new integrated research initiative in High Performance Computing and Communications (HPCC). The program focuses on the underlying research and the human talent needed to develop the next generation of supercomputer systems (including hardware, software, and networks).

The goal of the proposed initiative is to meet, by 1996, the needs of Federal research agencies to investigate and understand a wide range of fundamental scientific and engineering computational problems and, at the same time, allow the private sector to "leap frog" over the expected incremental improvements in conventional supercomputers.

Investments in research and technology development are planned in four HPCC program components:

- *High Performance Computing Systems (Hardware):* Undertaking research in scalable computer processors, memory, input/output devices and operating systems needed for scalable teraflop (trillion operations per second) supercomputers. The budget proposes $157 million.
- *Advanced Software Technology and Algorithms (Software):* In the long-run, the return to both the Government and the economy generally of software investments may be even greater than that of hardware investments. The computational model used to simulate the solid rocket booster failure blamed for the Space Shuttle Challenger disaster takes roughly 14 hours to run on a typical research lab minicomputer. Using a parallel processor significantly reduced this time, but optimized software brought it to under five seconds. This component has a large share of the initiative because there is a great need for adequate and affordable software to address unique fundamental scientific and engineering problems. The software usually represents five times the hardware costs. The budget proposes $265 million.
- *National Research and Education Network (Networks and Communications):* The goal of the National Research and Education Network (NREN) is to enable rapid access by the Nation's educational and research institutions to a broad range of Federal resources, including libraries, databases, and scientific facilities (e.g., computers, telescopes, accelerators). The focus of this element would be on integrating and up-

Table C–6. **THE BUDGET PROPOSES A 31 PERCENT INCREASE FOR HIGH PERFORMANCE COMPUTING**

grading existing federally supported research networks and on research in gigabit (billion bit per second) network switches, protocols, software, and security mechanisms. These improvements would be used to enable the transition of the existing Federal research network into a national gigabit research and education network. The budget proposes $92 million.

- *Basic Research and Human Resources (Research/Training):* This component would focus on fundamental "leapfrog" advances in HPCC technology and the training of students in the computational sciences. The budget proposes $124 million.

Advancing New Energy Technologies.—A major element of the Administration's National Energy Strategy (NES) will be increased investment in energy technology R&D. The budget includes $903 million, an increase of $227 million or 34 percent, for increased investments in R&D in support of NES R&D initiatives Governmentwide. The budget proposes $653 million for Department of Energy NES-related R&D, an increase of $134 million or 26 percent. Over the five year period 1992 through 1996, DOE would invest $3.5 billion in NES R&D initiatives discussed in this section.

The NES R&D strategy is based on several key elements:

- an emphasis on R&D areas that, if successful, could lead to significant displacement of petroleum;
- selection of R&D areas based on high R&D payoff potential—i.e., the potential to achieve significant cost and performance improvements;
- a comprehensive, interagency R&D program that includes both technology enhancements (e.g., more efficient engines) and more fundamental system changes (e.g., the potential for high speed rail and Maglev systems to displace automobile and air travel);
- a collaborative, cost-shared, Government-university-industry effort. This implementation approach would rely upon industry-led, joint Government-industry R&D planning and management and 50:50 cost sharing, with the research performed by industry or universities (except in situations where Government labs have unique research and testing capabilities). The formation of industry R&D consortia would be encouraged where feasible (e.g., in the pre-competitive R&D stage). This implementation approach would maximize the involvement of the ultimate technology users, enhancing the technology transfer process, and would minimize Government overhead costs.

The Department of Energy (DOE) estimates that the NES R&D Initiative could lead to a reduction in oil consumption of 5–8 million barrels per day by the year 2030, depending on the success of the proposed R&D programs.

The NES R&D strategy is intended to foster a new, results-oriented approach, and not merely more-of-the-same traditional Government-funded energy R&D programs. The Federal Government has had a substantial, broad-based energy R&D program since the 1973 oil embargo. From 1980 through 1990, the Government has invested about $21 billion in energy technology R&D. This investment has had relatively little payoff, for a combination of reasons: (1) the inherently high risks of some R&D, (2) poor R&D choices (e.g., synfuels, breeder reactors), and (3) lack of significant private sector financial and management involvement linking R&D to successful commercial deployment. The NES energy R&D initiative will take better advantage of the Nation's tremendous university and private sector technical talent, while avoiding the mistakes of past Government managed, crisis-born energy R&D programs.

The specific components of the NES R&D initiative are shown in Table C–7. These include:

- *Improved Vehicle Propulsion Technology* through research on high temperature diesel and gas turbine engines. Conventional spark-ignited and diesel engines have efficiencies of up to 31 percent. More efficient engines, including gas turbines, could achieve efficiencies approaching 40 percent.
- *Electric Vehicles,* including a new joint auto industry-government consortium to

Total, Department of Energy	519	653	+134	+26

develop battery technology for electric vehicles. Improved batteries that could extend vehicle range to 120–200 miles could enable electric vehicles to capture as much as 20 percent of the market by 2030. Fuel-cell-powered electric vehicles offer the potential to achieve up to 50 percent efficiencies.

- *Intelligent Vehicle/Highway Systems (IVHS),* is intended to increase highway safety, reduce congestion and decrease highway fuel consumption. IVHS uses state-of-the-art electronics, communications, and computer technology to improve traffic control systems, warn drivers of dangerous situations, and generally make more efficient use of the existing road system. IVHS can reduce congestion, improve traffic flow, reduce idling at traffic signals, and allow drivers to choose more efficient routes to their destination. DOE projections show a potential 30 percent *decrease* in average on-the-road fuel efficiency due to increasing congestion under current trends. Unless corrected, this could substantially offset any gains from more fuel-efficient vehicles. A study by Mobility 2000, a expert group of Federal and State highway officials and corporate and academic technical experts, estimated that IVHS has the potential to save up to 20 million gallons per day of gasoline.

- *High Speed Rail and Maglev* (magnetically-levitated trains), which may offer transportation and energy efficiency improvements. Current efforts include investigations into the economic and technical feasibility of high-speed rail and maglev as well as research on potential applications that would enhance the capacity of the existing transportation network. This work is being performed by the Departments of Transportation and Energy and the Army Corps of Engineers. High speed rail and Maglev transportation may have potential for trips of 200–600 miles in length, competing with both long distance automobile travel and short-haul air travel.

- *The National Research and Education Network,* part of the High Performance Computing and Communications Initiative, also will help advance technology to facilitate increased telecommuting, reducing both business travel and daily commuting. The flex-place workforce has grown over the past decade from 300,000 to 3.6 million. It is estimated that there are about 46 million potential telecommuters. Additional R&D can aid the emergence and spread of telecommuting networks, by linking cable and fiberoptic networks and enhancing the capability from digital data. In the absence of major system change, the Department of Energy projections show that total vehicle miles traveled (VMT) could increase by 50 percent by the year 2030. About 50 percent of VMT is work-related.
- *Energy-efficient Aeronautics R&D,* including technologies such as hybrid laminar flow and large structure composite materials will reduce aircraft friction and lower aircraft weight. The Department of Energy projects that U.S. air travel will double in the next 20-30 years. New technologies could save millions of gallons of aviation fuel per year.
- *Energy-efficient Air Traffic Control R&D,* a part of the national effort to modernize the air traffic control system, will permit more direct routing of flights.
- *Advanced Transportation Fuels from Biomass* will demonstrate use of lignocellulosic feedstocks to provide alcohol fuels on a scale which can verify technology and commercial costs. The production of ethanol from food crops currently costs $1.20 per gallon or more, requiring large Federal tax subsidies. The goal of this R&D initiative is the production of ethanol from non-food crops at $0.60 per gallon.
- *Alternative fuels utilization* will continue vehicle testing activities that will provide the database to facilitate greater use of alternative fuels.
- *Advanced Oil and Gas Recovery Technologies* will improve reservoir understanding for targeted drilling and develop better instrumentation, chemical injectants and reservoir interpretation techniques. Currently, up to two-thirds of oil resources remain in the ground after conventional production is completed. It is estimated that up to 25 billion additional barrels could be recovered through advanced recovery techniques by the year 2030.
- *Improved Energy Efficiency in Buildings and Industry* includes targeted R&D to provide cost-effective efficiency improvements and reduce oil consumption.
- *Advanced Light Water Nuclear Reactors* will incorporate passive safety features in a standardized design. This will reduce the time needed to license new plants, while assuring that safety issues are adequately addressed. The Department of Energy is currently supporting first-of-a-kind engineering work that will assist companies in their efforts to have the Nuclear Regulatory Commission certify the safety of new standardized designs.
- *Advanced Reactor Concepts* will have safety features that go beyond even the standardized designs currently before the Nuclear Regulatory Commission. High Temperature Gas Cooled Reactors use specially-coated fuel elements that will not fail even under the high temperatures that could occur during an accident. Liquid metal reactors use liquid sodium as the heat exchange medium. Researchers have demonstrated that both reactor types can shut themselves down safely under conditions that would be extremely serious for present-day reactors. The Department of Energy continues R&D support for both of these advanced concepts.

The NES R&D Initiatives are supported by increased investments in related areas of basic research. Basic research in areas such as advanced materials, superconductors, geo- and biosciences, and catalysis research may help accelerate development of petroleum substitutes and energy conservation technologies.

Enabling New Products and Processes—Advanced Manufacturing and Materials R&D.—The budget proposes $1,310 million for both advanced manufacturing and materials R&D, two key enabling technologies.

- *Advanced Manufacturing.*—The budget proposes over $1 billion for research and development on advanced manufacturing technologies. This includes an increase of over 15 percent for nondefense-related manufacturing R&D. Advanced manufacturing R&D includes activities within two broad areas: (1) efforts designed to use technology to improve the efficency or quality by which a product is brought from design to completion; and (2) activities directed at expanding the technical capability to bring a product (which is new and fundamentally different in character from existing products) from design to completion. An example of the latter is the effort to fabricate high-temperature superconducting wires.

  Improvements in U.S. manufacturing technology can increase productivity and quality, leading to competitive products which increase market share while supporting a high standard of living. While industry has the central role in R&D to improve manufacturing technology, an appropriate role in such R&D exists for the government as well. The Federal role in advanced manufacturing R&D lies in supporting (1) generic manufacturing technologies and (2) those technologies which are directly applicable to the procurement needs of government programs. About half of advanced manufacturing R&D proposed in the 1992 budget falls into each of these categories.

- *Materials R&D.*—Materials R&D forms the foundation for many advances in other technological areas such as aeronautics, computers, biotechnology, and manufacturing. The Federal Government funds a substantial amount of materials R&D, mainly in the area of materials science. However, additional work is needed in fundamental research on the synthesis and processing of novel materials. The budget proposes $84 million for a new initiative in the National Science Foundation intended to strengthen the competitive position of the U.S. in developing and using next-generation materials and processing methods. The 1992 program will focus on two areas recognized as having a high potential payoff: electronic and photonic materials, and biomolecular materials.

  A class of materials that has received much attention is *superconductors*. The Federal Government has traditionally supported the basic science that characterizes both high temperature (HTS) and low temperature (LTS) superconducting phenomena. The researchers in the U.S. credited with bringing the HTS materials to worldwide attention were all supported for many years by Federal agencies. At the time of the discovery of the phenomenon of HTS, the government was spending about $55 million annually on all aspects of superconductivity. The budget provides $93 million in 5 agencies (Defense, NASA, Energy, National Science Foundation and the National Institute of Standards and Technology in Commerce) for superconductivity R&D.

Protecting the Public Health Through Biomedical and Behavioral Research

> "Progress in the war against disease depends upon a flow of new scientific knowledge. New products, new industries, and more jobs require continuous additions to knowledge of the laws of nature, and the application of that knowledge to practical purposes. This essential, new knowledge can be obtained only through basic scientific research."[1]

Since Vannevar Bush made this statement in 1945, federally supported research has helped Americans live longer, healthier lives by improving the quality of medical practice and by developing new preventive measures. The U.S. leads the world in biomedical research—both the pace of new discoveries and America's continued dominance of scientific Nobel prizes attest to that pre-eminence.

---

[1] Vannevar Bush. *Science, the Endless Frontier: A Report to the President.* U.S. GPO, July 1945, p. 1.

The budget assures that the next generation will reap similar benefits by seeking substantial increases in the country's investment in biomedical and behavioral research and development. In the Department of Health and Human Services alone, this increase amounts to $564 million, or 6 percent, over 1991 funding levels.

Advances in biomedical and behavioral research can improve the quality of health care while helping to control health care costs. One example includes the research-induced changes in medical practice which reduced coronary heart disease death rates and the duration of heart diseases-related hospital stays—saving hundreds of thousands of lives and billions of dollars. Current path-breaking research, such as the first human gene therapy experiments conducted at the National Institutes of Health (NIH), proffers the hope of similar advances in human health and cost efficiency in the future. Research at the Alcohol, Drug Abuse, and Mental Health Administration (ADAMHA) into the causes of human addiction to drugs and alcohol offers hope of finding ways to reduce the human and societal toll caused by substance abuse.

The Federal investment in biomedical and behavioral research is large. In total, the budget proposes $9.8 billion for the Department of Health and Human Services, an increase of 6 percent over 1991. While most of this research is basic, considerable sums are invested in applied research and development as shown in Table C–8. This research helps ensure that basic research discoveries are translated into marketable therapies. Indeed, NIH funding of clinical trials, through which promising new therapies, preventive interventions and cures are examined for safety and efficacy, will total over $725 million in 1992. For example, since pharmaceutical companies traditionally have been slow to develop anti-drug abuse medications, the 1992 budget contains a $55 million initiative for medications development in ADAMHA, a 39 percent increase over 1991.

This Federal investment in biomedical and behavioral research has increased as a proportion of GNP from 0.12 percent in 1970 to 0.16 percent in 1992.

Although most of HHS funds are utilized for basic research which advances knowledge for combatting many diseases, some research can be loosely classified as related to one specific disease or another, as shown on table C–9. By comparing these data with the data in Table B–2 in Chapter IV.B., it can be seen that this investment by disease roughly corresponds to the toll these afflictions take in terms of death, illness, and human suffering.

Relating Research Investments to Selected Diseases.—Some have argued that a disproportionate share of health-related research dollars are being devoted to HIV/AIDS. It is true that spending per death from HIV/AIDS is high compared to that for heart disease, cancer, and stroke, the three leading causes of death in the country. HIV, however, often strikes early in life. More than 45 percent of AIDS victims are younger than 35, and a growing number are children. As a result, some suggest that research spending per year of potential life lost before age 65 for HIV and

Table C–8. **HEALTH R&D IN THE DEPARTMENT OF HEALTH AND HUMAN SERVICES**

(Dollar amounts in millions)

	Budget Authority			
	1991 Enacted	1992 Proposed	Dollar change	Percent change
Basic Research	5,101	5,477	+376	+7
Applied research	3,161	3,283	+123	+4
Development	1,012	1,076	+65	+6
Total Conduct, HHS R&D	9,273	9,836	+564	+6

the three killer diseases is more comparable than that for spending per death, as shown in the following chart. In addition, a comprehensive assessment of relative funding levels must consider other factors, such as morbidity and quality of life. The charts also show substantial investments in diabetes, a disease that is a major contributor to disability as well as the Nation's seventh leading cause of death.

Deaths and years of potential life lost attributable to the three major killers and diabetes are projected to grow, individually and collectively, by less than 7 percent over the 4 years between 1990 and 1993. In contrast, deaths and years of potential life lost due to HIV will increase much more quickly, rising by 40 to 80 percent. These projections further support the priority given to HIV research in the 1992 budget.

The Budget Includes a Major Investment to Confront Human Immunodeficiency Virus/Acquired Immune Deficiency Syndrome (HIV/AIDS).—Since the greatest hope for devising better treatments, or even a cure or vaccines, for HIV/AIDS will come from advances in knowledge, the budget continues to place a priority on biomedical and behavioral research related to HIV/AIDS. As shown in table C–10, governmentwide HIV/AIDS funding will increase by $558 million or 15 percent. This includes a 5 percent increase for research and a 24 percent increase for treatment.

The budget would enable the Nation to continue making progress in the battle against HIV/AIDS. Additional candidate therapies will be screened and tested, education programs will continue to discourage behaviors that lead to transmission of the virus, and treatment and income support funds will continue to be made available to those already afflicted. Indeed, the largest increase related to HIV/AIDS will come from Federal spending for Medicaid and Medicare, which are projected to increase by a total of 29 percent over 1991. Additional research and education are the best methods for ensuring that future generations will not bear so heavy a burden, and the 1992 budget therefore makes substantial efforts in these areas.

Moving Fusion Energy From Science to Engineering.—Fusion energy offers the potential to be a clean plentiful fuel for the production of electricity for the longer term. Compared with the burning of fossil fuels, fusion would produce no sulphur or carbon dioxide. The Fusion Program Advisory Committee (FPAC) of the Department of Energy has recommended a long-range goal-oriented plan for an operating Demonstration Power Plant by 2025 and an operating Commercial Power Plant by 2040.

The budget proposes $337 million for fusion, an increase of $62 million (23 percent) over the 1991 level. Funding is included for R&D and design work at the Plasma Physics Laboratory at Princeton University leading to a Burning Plasma Experiment to improve the scientific base for magnetic fusion. Over the next year, the Department will be seeking international participation in this endeavor prior to committing to a specific construction project. Inertial confinement fusion alter-

Income Support	305	414	+109	+36
Total[2]	3,701	4,259	+558	+15

[1] Funds are for programs in the Departments of Health and Human Services, Defense, Veterans Affairs, Education, Justice, State, Labor, and independent agencies. Total also includes obligations for the Social Security Administration.

[2] In addition to the spending identified above, the budget includes other initiatives, most notably those related to drugs and infant mortality, that contribute to the fight against HIV and AIDS.

natives will also be pursued in the research program.

The budget proposes that the United States continue international participation in the engineering design phase of the International Thermonuclear Engineering Reactor. This 6-year collaboration among four equal partners (U.S., European Community, Japan, and the Soviet Union) is a model for international cooperation in science and technology. Such a joint project has the advantages of sharing knowledge and personnel, reducing the financial burden for each party, and optimizing the use of special facilities and capabilities for the common goal of achieving energy from fusion.

Improving the Air Transport System—Aeronautics R&D.—The goal of NASA's aeronautics research and technology program is based on a strategy that calls for developing a broad technology base in support of the commercial aviation industry; enhancing the safety and capacity of the national airspace system; and helping assure U.S. aeronautical superiority for national security. Aeronautics R&D has traditionally been a highly successful close cooperative effort between the Federal Government and the private sector.

Technologies are being pursued which offer major advances in vehicle performance and capabilities. Research efforts have been expanded in high-payoff areas associated with a broad range of future vehicle applications including subsonic and high-speed transport aircraft.

The budget proposes $543 million for aeronautics R&D (excluding High Performance Computing), an increase of 13 percent over the 1991 enacted level. The budget proposal reflects the need to continue to address critical technology barriers to and strengthen technology development necessary for future aviation advances. Work in focused high-speed research has been expanded to include a focus on enabling propulsion materials necessary to develop future aircraft. In addition, the budget includes funding for a new program focused on advanced subsonic aircraft. This program will develop nondestructive evaluation technology to help ensure the safe operation of aging transport aircraft now in the National Airspace System and will also provide the technology base for application and certification of fly-by-light and power-by-wire control systems.

In addition to the work proposed above, the budget includes $72 million as NASA's share of the joint NASA/Defense National Aerospace Plane Program (NASP). Defense will provide $233 million in 1992. This program is focused on development of hypersonic technology leading to a future decision on a flight research vehicle.

Expanding Civilian Applied R&D at the National Institute of Standards and Technology (NIST).—The budget proposes $248 million, a 15 percent increase over 1991, for NIST. NIST carries out R&D which supports standards development and advances measurement techniques, both of which are critical to improving product quality, allowing for effective use of new technologies, and improving public safety. In addition, NIST performs generic applied research and technology development, often in collaboration with industry, which has potential benefit to broad segments of the economy. The budget proposal continues an effort begun in the 1991 budget to expand NIST's ability to perform generic applied research and technology development and to address a rapidly growing number of important standards and measurement issues.

NIST in-house research covers a broad spectrum of technologies such as electronics, manufacturing, materials science, chemical science and information systems. The 1992 increase will support new projects in many areas including: expedited development of measurement standards for intelligent machines; development of standards for fiber-optic systems and high-temperature superconductors; expanded research into intelligent processing of materials; analysis of the thermophysical properties of refrigerants that are alternatives to chlorofluorocarbons; methods to measure the performance of high density recording on magnetic films; and development of seismic design and construction standards to reduce vulnerability to earthquakes.

The budget also includes $36 million for the Advanced Technology Program (ATP). This program provides a minority share of funding for industry-led high risk R&D on pre-competitive, generic technologies. In a broad sense, the goal of the program is to help bridge the gap between more fundamental R&D and commercial R&D. ATP is an important, but experimental, program whose results cannot be predicted with certainty. Another experimental program is the Manufacturing Technology Centers. The budget proposes $10 million for this program to support the continuation of the five existing Manufacturing Technology Centers and the start of a sixth center. These centers are intended to enhance U.S. manufacturing by transferring Federal advanced manufacturing technologies and practices to the private sector. Three of the centers will undergo a review in 1992.

MAINTAINING NATIONAL SECURITY: DEFENSE R&D IN THE 1992 BUDGET

For all defense-related R&D, including R&D supported by the Departments of Defense and Energy, the budget proposes $43 billion, an increase of over $5 billion, or 14 percent, above 1991. Defense-related R&D will comprise 60 percent of overall Federal R&D funding in 1992.

Department of Defense.—A strong defense R&D program is a key element of United States national security strategy. This is underscored by the fact that R&D funding will grow from $35 billion in 1991 to over $40 billion in 1992 while the defense budget overall will decline in real terms. Not only does the Defense R&D program provide for the development of major weapon systems but it also provides important general benefits to U.S. technological capabilities.

Technology Base.—The budget proposes $3.9 billion for the technology base—programs for basic and applied research that provide future defense options and that advance technologies with broad applications. It also helps guard against technological surprise by potential adversaries. Investment in the technology base provides a broad range of options for future military capabilities that may be necessary. It is essential for the U.S. to maintain the technological superiority in fielded weapon systems and the commitment to development and exploitation of advanced technologies. Examples are anti-submarine technologies for detecting increasingly quiet submarines, improving torpedo warheads and delivery mechanisms, and developing nonconventional methods of acoustic detection. As discussed in the section of this chapter on high performance computing and communications, Defense will play a lead role in developing the technology to increase computer performance by several orders of magnitude. This continues the pathfinding efforts of the Department of Defense that have led to today's advanced parallel processors. In addition, DOD technology-base R&D programs have led to civilian applications. These include CATSCAN imaging technology for improved medical diagnosis, advanced structural materials for commercial aircraft (aluminum alloys and composites) and such common devices as microwave ovens. The basic research portion of the DOD technology base supports a wide range of scientific disciplines, including oceanography, materials, mathematics and biochemistry.

Development.—The budget proposes nearly $37 billion for development programs, an increase of over $5 billion, or 16 percent. Within this total, the budget proposes $2.2 billion to fabricate prototype systems and subsystems that support defense missions. Some of these also have potential commercial applications. Defense will provide major support to SEMATECH, the semiconductor industry consortium, to advance the manufacturing of integrated circuits. In space, defense is providing significant support for the National Aerospace

Table C–11. **MAINTAINING NATIONAL SECURITY**

(Dollar amounts in millions)

Department	Budget Authority			
	1991 Enacted	1992 Proposed	Dollar change	Percent change

Total, Conduct of R&D	37,783	43,247	+5,464	+14

Plane Program and for development of a new space launch system.

The budget proposes nearly $5 billion for preliminary work on subsystems and supporting technology for defense against ballistic missiles under the Strategic Defense Initiative. These efforts are directed toward a defense against limited attacks from anywhere in the world against U.S. territory, deployed U.S. forces or our allies.

The largest portion of Defense R&D funding is allocated to the development of a new generation of advanced weapons systems and improvements to currently-deployed systems. The budget proposes over $29 billion for these activities. New weapons systems under development include the B–2 bomber, the Advanced Cruise Missile, the Advanced Tactical Fighter, the SSN–21 attack submarine and advanced armored vehicles. In addition, current systems, such as the M–1 tank, the F/A–18 fighter and the F–16 multi-role aircraft will be upgraded.

Department of Energy.—The budget proposes $2.8 billion for Department of Energy (DOE) Atomic Energy Defense programs, an increase of $161 million, or 6 percent over 1991. The largest component of these R&D activities is the research, development and testing of nuclear weapons. The budget proposes $1.8 billion for that activity, including associated R&D facilities, an increase of $27 million over 1991. The DOE nuclear weapons R&D program will increase efforts to improve the safety of nuclear weapons and to develop new technology to verify arms control treaties. In addition, the DOE weapons laboratories are increasing efforts to promote the transfer of non-sensitive defense-funded technology to the private sector. The budget proposes $32 million to support for such technology transfer activities.

The environmental cleanup of atomic energy defense facilities is one of the fastest growing programs in DOE. Technology development activities play a major role in the clean-up effort, resolving major technical issues related to effective waste management and cleanup and advancing technologies to attain and maintain compliance with current laws and regulations. The budget proposes to increase this investment in technology development by 60 percent, from $206 million in 1991 to $330 million in 1992. The complete DOE environmental restoration and waste management progam is discussed in detail in Chapter IV.E.

In addition, DOE develops nuclear reactor systems to power Naval vessels. The budget proposes $678 million for Naval reactors R&D, an increase of $26 million over 1991.

ENCOURAGING INCREASED PRIVATE SECTOR R&D INVESTMENTS

The budget proposes permanent extension of the research and experimentation tax credit and a one-year extension of the tax rules governing the allocation of foreign and domestic R&D expenditures.

Industry is the largest supporter of R&D in the Nation, providing about 50 percent of the total national R&D investment. It also performs much of the R&D funded by the Federal Government. In total, over 70 percent of all R&D is performed by industry.

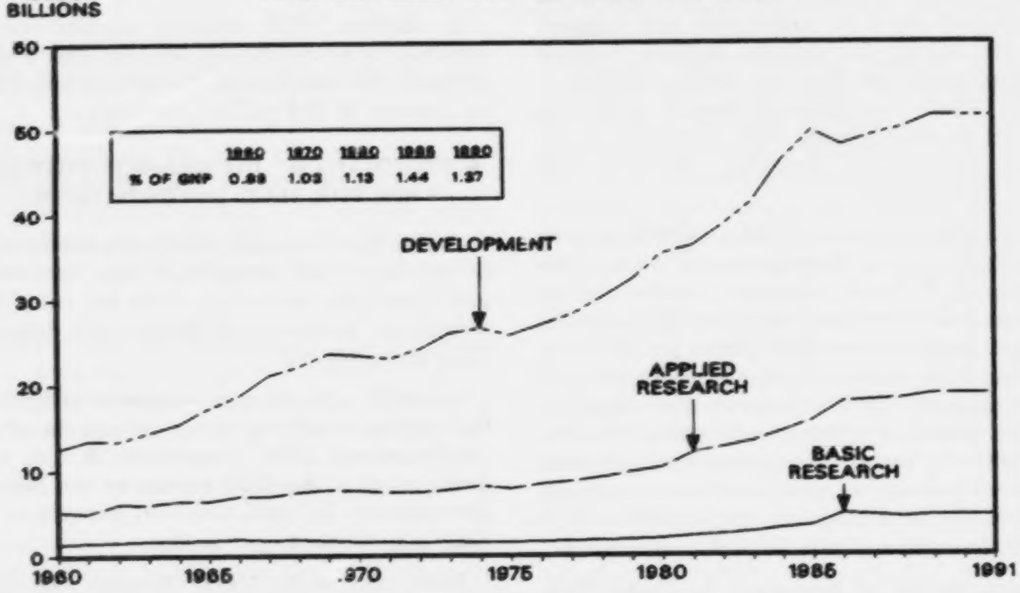
From the early 1960s through the mid-1980s, total real industrial R&D expenditures increased significantly, mostly in development. Since the mid-1980s, however, the rate of growth in industrial R&D spending has leveled off, dropping from a rate of 7 percent average annual percent real growth between 1980–1985 to 2 percent between 1985–1990. For 1990 and 1991, both the National Science Foundation and the Battelle Memorial Institute project that industrial R&D will, at best, keep pace with inflation. The tax incentives can help boost private R&D investment.

R&E Tax Credit

The Research and Experimentation (R&E) tax credit was originally adopted in 1981 to encourage increased private R&D spending. The credit was never made permanent, but was renewed in 1986, 1988, 1989 and 1990 at a lower rate than originally granted. Reducing the rate of the credit, combined with reductions in corporate income tax rates and the actual calculation of the credit, have the effect of reducing the incentive effect of the original credit by more than 50 percent.

R&E tax credits prior to 1989 reduced the cost of increments to R&D for most qualifying firms by about 6 to 9 percent. In 1989 the incentives provided by the credit were im-

INDUSTRY SUPPORT FOR RESEARCH AND DEVELOPMENT HAS LEVELED OFF IN RECENT YEARS



Sources: National Science Foundation, Office of Management and Budget.

proved. The version of the R&E credit enacted in 1989, and extended in the 1990 Omnibus Budget Reconciliation Act, reduces, for most qualifying firms, the cost of increments to R&D by 20 percent. Bailey and Lawrence have estimated that this version of the R&E tax credit should increase corporate R&D spending in the 1990s by about 4 percent. Making the credit permanent would help reverse the recent trend toward leveling off of corporate R&D spending.

The budget proposes two changes in the tax code designed to provide additional incentives for industry to increase its R&D expenditures. The budget proposes to make the 20 percent R&E tax credit permanent by allowing 100 percent of total research expenses to be used for the computation of the credit for all years after December 31, 1990. In addition, the budget proposes to extend for one year the rules, as modified in 1989 and extended in the Omnibus Budget Reconciliation Act of 1990, for the allocation of foreign and domestic R&D expenditures for companies with foreign operations. The proposal would allow 100 percent of U.S. expenditures to be covered rather than the current 75 percent. This proposal would apply to all tax years beginning after August 1, 1990, when the current rules expired.

ENHANCING THE R&D INFRASTRUCTURE

Adequate research facilities and equipment are essential to the effectiveness of national research efforts—collectively an enterprise that supports the search for a basic understanding of nature, the missions of government agencies, the improvement of industrial products and processes, and the training of future generations of scientists and engineers. To sustain a strong national research capability and to enable expansion of research capacity, R&D infrastructure must be maintained and replenished.

Overview of Trends and Status of National R&D Infrastructure

The Federal Government directly funds the cost of facilities and equipment necessary for the conduct of R&D at Federal facilities. Private industry and universities have primary responsibility for the R&D infrastructure under their respective jurisdictions. However, since the Federal Government does support basic research at universities, it provides substantial funding for university R&D facilities and equipment:

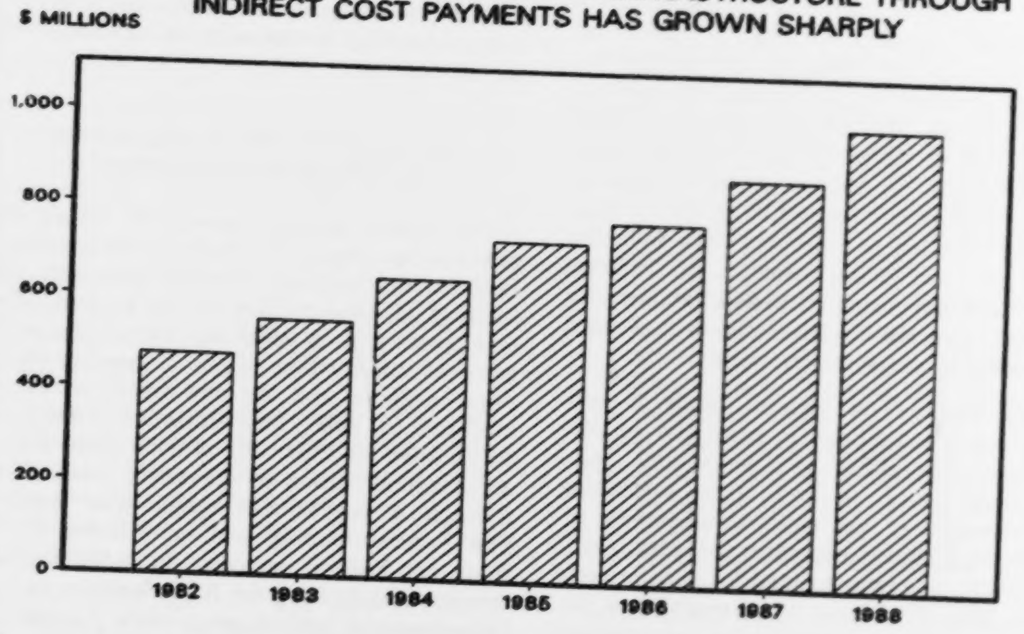
- For *new facilities and equipment,* Federal agencies provide direct funding where they are directly related to federally funded research.
- For *repair and renovation,* the Federal Government provides indirect funding, through the payments to universities of use and depreciation allowances for research facilities as part of the indirect costs associated with research grants.

University Research Facilities.—The National Science Foundation reported in its 1990 facilities survey that there were an estimated 116 million net assignable square feet (NASF) of science/engineering (S/E) research space at the Nation's 525 research-performing institutions in 1990, representing 42 percent of the total 276 million NASF of S/E space at these institutions. (This figure excludes academically-administered Federally Funded Research and Development Centers (FFRDCs).) There were no significant changes from 1988 to 1990 either in the overall amount of academic research space or in its distribution among institution types or research disciplines.

Federal Support for University Research Facilities.—The Federal Government has provided a significant level of support for university research facilities. This includes direct support for facilities in support of federally funded research and indirect cost recoveries. In 1988–89, the latest period for which estimates are available, private institutions initiated $738 million of new construction and public institutions initiated $1.73 billion of new construction. The Federal Government provided an estimated 11 percent and 16 percent of these funds, respectively.

Expenditures for the repair and renovation of research facilities totalled an estimated $1 billion in 1988–1989, with private institutions

FEDERAL SUPPORT FOR UNIVERSITY INFRASTRUCTURE THROUGH INDIRECT COST PAYMENTS HAS GROWN SHARPLY



accounting for one-third of this total ($311 million). Direct Federal funding accounted for 9 percent of repair and renovation activity at private institutions, and 4 percent at public institutions.

Indirect Federal support for academic research facilities, through the recovery of use and depreciation charges and operations and maintenance charges on Federal grants, reached almost $1 billion in 1988 (the latest year for which data are available). Almost 20 percent of these charges was for facility depreciation (which was then intended to be applied by the institutions to renovation or new construction). The remaining 80 percent was for recovery of operations and maintenance costs. Over the period 1982–1988, the level of indirect cost recoveries of facilities charges increased over 70 percent in real terms.

However, because indirect cost recoveries are generally credited to the general funds of the institutions, there is no way to determine if the use/depreciation recoveries were actually applied to research facility construction or repair.

The NSF survey reported an estimated $12 billion in "needed, but unfunded capital projects" at universities. Each academic institution must provide a certification that its research facilities are adequate (to perform the research proposed) as a condition of accepting research grants. This backlog reported by NSF has not had an apparent effect on the ability of universities to accept Federal research funds. However, the perception of such a large "backlog" has led to increased calls from the institutions and many members of Congress for a major expansion of Federal support for academic research facilities. There has been Congressional action in two areas:

- "Earmarking" of Federal funds to construct new facilities at particular institutions. The Office of Science and Technology Policy, as part of its continuing evaluation of the state of university research facilities, estimates that about $427 million was appropriated for such projects in 1991. (The issue of earmarking is discussed in more detail in a later section of this chapter.)
- Providing direct grants for academic research facilities repair and renovation through the National Science Foundation, funded at $20 million in 1991.

The 1992 budget does not contain funding for either of these practices. Earmarking which does not involve merit review of any kind, is an inefficient use of scarce resources. Further, it has the effect of weakening the Nation's overall R&D effort. Funds earmarked for academic research facilities by Congress in 1991 and previous appropriations bills not only were without the benefit of merit-based review, but most often came at the expense of needed increases in support for academic researchers and in other key activities at Federal laboratories. The Administration will continue to support direct Federal funding for academic research facilities where such facilities are an integral part of merit-based, competitive research projects. For example, the budget proposes $25 million for academic research facilities associated with the National Research Initiative of the Department of Agriculture.

Special programs for facilities repair and renovation are not warranted because the Federal Government directly supports only a small proportion (less than 10 percent) of this activity. Further, the large amounts of funds recovered as indirect costs represent a considerable, and continuing, investment in academic research facilities.

1992 BUDGET PROPOSALS FOR RESEARCH FACILITIES

The budget proposes nearly $4 billion for construction, repair and modernization of R&D facilities and for major research equipment, an increase of $464 million or 15 percent. The major increases in 1992 are due to the initiation of construction of the Superconducting Super Collider and the new instrumentation initiative in NSF. This initiative, funded at $50 million in 1992, will provide state-of-the-art instrumentation to university researchers through a merit-based competitive process. The Federal funding will be matched 50:50 from non-Federal sources. In addition, although total funding for R&D facilities in the Department of Agriculture (USDA) is proposed to decline, there is a total of $25 million for

Table C–12. IMPROVING R&D FACILITIES

a facilities program associated with the USDA National Research Initiative.

EARMARKING OF R&D FUNDING

The hallmark of the Federal Government's support for R&D has been the awarding of R&D grants and contracts through a competitive process. This merit-based approach is intended to maximize the potential return on these investments by selecting only the highest quality research for support.

This merit-based approach, however, has been increasingly eroded in recent years due to the Congressional practice of "earmarking", i.e., requiring that R&D funds be awarded to particular institutions or even to particular researchers. This practice is most visible in the area of new university buildings. However, the practice of earmarking is actually much more pervasive, reaching down to individual research projects.

As part of an ongoing study of the state of American science, the Office of Science and Technology Policy recently completed a detailed analysis of earmarking in the 1991 appropriation bills. The major findings of the study follow.

- The study identified 492 such earmarks, totaling $810 million. Of these 325 (totaling $182 million) were in Agriculture, where specific earmarking by Congress has historically been customary.
- In other areas, R&D earmarking may be on the rise, with 48 separate actions in Energy and 20 to 30 each in Defense, Interior, General Services Administration (GSA), and the Environmental Protection Agency. In Defense, $253 million was applied to R&D earmarks, which were exempted from a previously enacted legal requirement for competition. Also noteworthy is the $61 million in a GSA appropriation for R&D facilities construction at 21 universities and other private institutions. Neither GSA nor the Treasury-Postal Appropriations subcommittee, where these items originated, normally have responsibility for such facilities.
- The R&D earmarks have put an extra burden of at least $332 million on the R&D programs proposed in the President's 1991 budget, because the earmarks were made in programs where the overall funding level was the same or less than the President's 1991 request. The most serious impacts appear to be in Energy and Agriculture. The other $475 million of R&D earmarks were covered, at least in part, by increases in the R&D accounts, which presumably means that a corresponding burden was applied elsewhere in the budget.

- At least 25 of the earmarks appear to call for the establishment of new centers, institutions, or other organizations. In most of these cases, continued Federal support in future years seems clearly implied. Thus, the 1991 earmarks have put a built-in burden on the 1992 and future budgets, an effect that will be compounded if additional earmarks are made in future years.

As the Office of Science and Technology Policy has noted, the study was based only on a review of the often meager information in the Congressional reports and bills. Therefore, it did not identify the sponsorship of the earmarks and does not provide a basis for judgments on the merits of the earmarked items or on the motivations of the earmarking. A more in-depth case-by-case review, with agency or Congressional staff directly involved, would be needed to determine to what degree each earmark was (1) a response to advocacy by a particular institution; (2) a parochial initiative in Congress or by a Federal agency; or (3) a recognition by Congress of a significant national or programmatic need.

Table C–13. CONGRESSIONAL EARMARKING OF R&D FACILITIES AND RESEARCH IN 1991 APPROPRIATIONS BILLS

EXPANDING THE GEOGRAPHIC FRONTIER: SPACE EXPLORATION IN THE 1992 BUDGET

The exploration of space provides tangible benefits to the Nation in the form of new materials, scientific and technological discoveries that will stimulate economic growth and improve life on Earth. Space also provides large intangible benefits to the Nation with activities that lift the spirit of people everywhere. Our will to explore the unknown frontier of space, both with robotic probes and manned missions, is one measure of the vision and maturity of the Nation.

The key to the successful exploration of space is stable and sustainable funding of a balanced program of science, applications and manned space activities. The budget provides clear evidence of the President's continued commitment to his long-term space goals, and

Table C–14. THE BUDGET CALLS FOR A 15 PERCENT INCREASE FOR MAJOR SPACE ACTIVITIES

(Dollar amounts in millions)

[1] Includes funding for all other NASA activities including space research and technology, aeronautics, commercial programs, personnel, construction, and tracking.

to active American leadership in space science and exploration.

The budget proposes to allocate a total of $15.7 billion for the National Aeronautics and Space Administration (NASA). This represents an increase of 13 percent over the 1991 enacted level. The strategy behind the 1992 budget has been guided in large part by the findings and recommendations of the Advisory Committee on the Future of the U.S. Space Program (the Advisory Committee). This Committee was asked to examine the goals, strategies and programs of the current civil space program and recommend changes where necessary. The budget provides increases for space activities, including research, development, and operations, to support critical elements of space transportation (that provides the enabling infrastructure for all other space activities), a robust program of space science, to meet two major "missions"—a Mission to Planet Earth" and a "Mission from Planet Earth".

SPACE TRANSPORTATION INFRASTRUCTURE

The foundation of U.S. all space activities is space transportation. Without adequate transportation, no scientific or exploration activities would be possible. Over the last several years, it has become increasingly evident that the robustness and the flexibility of the U.S. space launch capability would not be sufficient to carry the Nation into the next century. At the present time, the U.S. has one manned space transportation vehicle, the Space Shuttle, and a fleet of expendable launch vehicles with a broad range of payload capability. Several classes of these expendable vehicles are provided on a commercial basis to the Federal Government to meet its needs. In addition, DOD owns a very large expendable launch vehicle, the Titan IV.

The strategy reflected in the budget is founded on two underlying principles: (1) enhance the reliability, operability and schedule predictability of the Space Shuttle; and (2) begin now to develop new launch capability that will relieve the burden now being carried by the Shuttle;

Space Shuttle.—The budget recognizes the importance of the Shuttle to the entire civil space program. The Shuttle is the world's most versatile space transportation vehicle, with the capability to launch and retrieve satellites and to serve as an orbiting laboratory for microgravity and life sciences. However, the Shuttle is also complex and expensive to operate. Thus, its use should be limited to payloads that require manned presence or other unique Shuttle capabilities. This strategy recognizes the Shuttle for what it is—a precious resource that should be conserved—and should result in a planned level of activity that is both realistic and prudent.

As a consequence, the planned Shuttle flight rate has been established at 9 missions per year in 1992 and 1993, and 10 missions per year thereafter. This will allow Shuttle activity to increase from the current level, but will result in a more stable and attainable flight schedule, limit operational pressures on the system, reduce long-term risk exposure, and facilitate implementation of cost containment measures. These objectives are consistent with the recommendations of the Advisory Committee.

Even so, it is clear that the Shuttle will be essential to the civil space program for at least the next decade. Therefore, investments in R&D to maintain and improve the safety, reliability and performance of the Shuttle are of a high priority. These investments include:

- *The Advanced Solid Rocket Motor (ASRM).*—This program is intended to develop a newer, more capable, more reliable and safer generation of solid rockets. A new state-of-the-art ASRM production facility is under construction at Iuka, Mississippi. Advances in production learned from the ASRM are expected to be useful for solid rockets in other applications (e.g., new unmanned launch vehicles). The budget proposes $350 million to continue the facility construction and motor development.
- *Assured Shuttle Availability (ASA).*—With many operational systems, there is a need to establish a well-planned program that is structured to make continued improvements and to incorporate new technology where it is cost-effective to do so. Both the military services and commercial transport operators routinely provide for such programs for their fleets of aircraft and ships. Up to now, however, no such structured program has existed for the Shuttle. Improvements and upgrades were approved and funded on an ad hoc basis. The budget proposes $122 million to initiate a new program, Assured Shuttle Availability (ASA), that will provide a formal funding mechanism and process for identifying and incorporating high-priority improvements into the Shuttle. Included in this activity will be the ongoing work to develop an Alternate Turbopump for the Shuttle main engine.

New Launch System.—The continued investment in the Shuttle is coupled with the recognition that a new launch system will be needed by the early part of the next century—for a range of payloads including Shuttle-sized and larger payloads up to and including a "heavy-lift" capability. More capable and more cost-effective space transportation systems will benefit all space programs, including national security, space science and space exploration. Future space exploration will require a new heavy-lift launch vehicle. In addition, a new launch system will provide a strong technology base for improvements in the capabilities, technology and cost-effectiveness of the U.S. commercial space sector.

The budget proposes $175 million for NASA and $175 million for DOD to continue advanced engine development and to initiate a program that will culminate in the development of a new space launch system. This new capability was recommended by Advisory Committee on the Future of the U.S. Space Program. It is expected that NASA and DOD will jointly manage and fund this program on a 50:50 basis. The program will involve development of both new propulsion systems and new vehicle systems. The two agencies will work together to develop a strategic plan, including budget, program and management options, for

Table C–15. **THE BUDGET INCLUDES FUNDING FOR 9 SHUTTLE FLIGHTS AND INVESTMENTS TO IMPROVE THE SHUTTLE**

(Dollar amounts in millions)

	Budget Authority

Total	5,815	6,452	+637	+11

proceeding with new vehicle development and will report to the National Space Council.

SPACE SCIENCE

The budget proposes $2.1 billion, an increase of 21 percent over 1991, for NASA's space science programs, including astronomy, life sciences, planetary exploration, Earth science (other than Mission to Planet Earth), materials research, and other space-based research and flight programs.

Several exciting flight programs have been launched in the past year, including the Galileo mission to Jupiter and the Magellan radar mapping mission to Venus. There are over 30 minor and major flight programs that are planned for launch over the next five years, including Mars Observer, the Advanced Communications Technology Satellite, the Gamma Ray Observer, and the Advanced X-Ray Astrophysics Facility.

The implementation of this broad research program is based on a long-range, prioritized strategic science plan that was developed in cooperation with NASA's external science advisory group and is consistent with recent recommendations of the Advisory Committee on the Future of the U.S. Space Program. These programs represent nearly 20 percent of the NASA budget total.

MISSION *TO* PLANET EARTH: THE U.S. GLOBAL CHANGE RESEARCH PROGRAM

World leaders are taking an increased interest in the economics and social implications of global environmental changes, both natural and human-induced. In virtually all these issues, the salient feature is the significant scientific uncertainty associated with predicting the behavior of the coupled ocean-atmosphere-land Earth system. The potentially large costs associated with addressing environmental changes (e.g., "greenhouse effect", global climate change, and ozone depletion) require that policy decisions be based on adequate scientific knowledge.

To provide this knowledge, the U.S. Global Change Research Program (USGCRP) was initiated in the 1990 budget. The 1992 USGCRP budget again proposes a major expansion of this unprecedented interagency research effort. Funding for global change research will total $1,186 million, a $232 million, or 24 percent, increase over the 1991 enacted level. By 1992, funding for the USGCRP will have nearly doubled since 1990. These activities include a broad range of monitoring, modeling, and fundamental research efforts focused toward producing a predictive model of the Earth "system". The U.S. provides 50 percent of the estimated worldwide total of $2 billion spent on global change research.

The USGCRP has been developed through the interagency Federal Coordinating Council on Science, Engineering and Technology's Committee on Earth and Environmental Sciences (CEES). The program is driven both by a prioritized science planning framework that has been endorsed by the U.S. and international scientific communities, and by key scientific questions related to global change policy issues such as the "greenhouse effect", global climate change, and ozone depletion.

To further ensure that the USGCRP continues to be relevant to policymakers, the CEES established a set of integrating themes (i.e., climate modeling, global water, carbon, and energy cycles, ecological systems, and sea level change) that were based on the recent Scientific and Impacts Assessments of the Intergovernmental Panel on Climate Change (IPCC). In order to improve the Earth system modeling capabilities and support the development and implementation of a comprehensive approach to greenhouse gas emission reductions, the IPCC assessments concluded that a significant reduction in scientific uncertainties would have to be achieved in the following areas:

- sources and sinks of greenhouse gases, which affect predictions of future concentrations;
- clouds and radiative balance, which strongly influence the magnitude of climate change at global and regional scales;
- oceans, which influence the timing and patterns of climate change;
- land-surface hydrology, which affect regional climate change and water availability;
- polar ice sheets, which affect predictions of global sea level changes; and
- ecological dynamics, which are impacted by and respond to climate change.

Using the science priorities and the integrating themes, the CEES developed a balanced and integrated research effort for resolving the highest priority scientific uncertainties. The space-based component of the USGCRP is comprised of NASA's Mission to Planet Earth (MTPE) which includes three elements:

- *Earth Observing System (EOS):* EOS is a series of space platforms and remote sensing instruments for monitoring a variety of Earth processes, a large data management system, and support to individual researchers to analyze the data. Data collection will continue for a period of roughly 15 years. The Japanese and Europeans will make major contributions by developing instruments and platforms which are integral elements of the MTPE concept.
- *Precursors:* A variety of satellite and research programs that will be flown or undertaken in the next several years designed to improve our understanding of a broad variety of terrestrial, atmospheric, and oceans processes. These are important precursors to EOS but will not provide the critical simultaneity of data collection provided by EOS.
- *Earth Probes:* This series of very small, simple, and relatively inexpensive satellites will collect data on specific concerns: global ozone, ocean surfaces, and tropical rainfall. There will be five Earth Probe missions between the 1993–1997.

The Earth-based component of the USGCRP is composed of agency activities that support global or very large scale Earth-based observations (e.g., ship, aircraft, and ground-based research campaigns), and that support fundamental research on important geophysical processes. Many of these Earth-based programs are dependent on the data collected by MTPE or provide ground-based data needed to calibrate MTPE remote sensing instruments. The balance between global space-based observations, global Earth-based observations, and the process studies is essential to the ultimate development of an integrated Earth system model. Within the Earth-based component of the USGCRP:

- NSF and NOAA will provide the continental or global scale Earth-based observations by supporting international programs such as the World Ocean Circulation Experiment, the Global Energy and Water Experiment, Joint Global Ocean Flux Studies, and the Tropical Ocean-Global Atmosphere Program.

Table C–16. **U.S. GLOBAL CHANGE RESEARCH PROGRAM**
(Dollar amounts in millions)

Department or Agency	Budget Authority			
	1991 Enacted	1992 Proposed	Dollar change	Percent change
National Aeronautics and Space Administration	652	773	+121	+19
Earth Observing System	191	336	+145	+76
Remotely Piloted Aircraft	—	5	+5	—
Precursors/Earth Probes	461	432	−29	−6
National Science Foundation	87	119	+32	+37
Energy	66	77	+11	+17
Agriculture	39	53	+14	+36
Commerce (NOAA)	47	78	+31	+66
Interior	37	46	+9	+24
Environmental Protection Agency	22	26	+4	+18
Smithsonian	5	8	+3	+60
Defense	0	6	+6	—
Total, Budget Authority	954	1,186	+232	+24

- NSF, NOAA, NASA, DOE, DOI, EPA, USDA, Smithsonian, and DOD will all support the prioritized and important fundamental geophysical process studies and modeling efforts that are reflected in the USGCRP integrating themes.

In 1990, the National Academy of Sciences' National Research Council conducted a review of the USGCRP and endorsed it "as a sound national program to reduce the scientific uncertainties associated with global change issues." The NRC also was asked to examine many of the underlying EOS assumptions (i.e., the environmental parameters being collected, the need for data simultaneity, and the data management approach). For EOS, the NRC endorsed the science but suggested that other flight alternatives should be examined for some of the EOS remote sensing instruments. In response to this recommendation and similar recent recommendations made by the Advisory Committee on the Future of the U.S. Space Program, an external engineering review will be undertaken during 1991 to look at alternative approaches to flying EOS instruments.

One area that has received special emphasis is Arctic research, though U.S. activities in the Arctic go beyond the range of programs included in the USGCRP.

U.S. policy in the Arctic consists of four elements: protection of essential security interests; support for sound, rational development of the region; promotion of scientific research contributing to knowledge about the Arctic; and promotion of mutually beneficial international cooperation in the Arctic. Federal Arctic research is guided by a 5-year research plan developed by the Interagency Arctic Research Policy Committee (IARPC) (in consultation with the Presidentially-appointed Arctic Research Commission and other interested groups) and updated biennially.

The budget includes $134 million for Arctic research, an increase of about $12 million over the 1991 level. Activities included in the USGCRP account for approximately 50 percent of this increase. Within the total for 1992, $60 million is proposed to implement the four integrated programs covering the western Arctic: oceans research, geodynamics, studies of the Bering Sea and land mass, and monitoring and data collection activities. Approximately $6 million of this amount is for ship and aircraft support in five agencies, NSF, Transportation, NOAA, Interior, and DOD/Navy. These programs support bilateral and multilateral environmental, space, oceans, and social science agreements and cooperative activities.

Table C–17. UNDERSTANDING THE ARCTIC

(Dollar amounts in millions)

Category	Budget Authority			
	1991 Enacted	1992 Proposed	Dollar change	Percent change
Resource development[1]	49	56	+7	+14
Arctic as laboratory[2]	48	50	+2	+4
National security[3]	25	28	+3	+12
Total	122	134	+12	+10

[1] Includes the Departments of Interior, Commerce, Agriculture, Energy, Transportation, State, and the Environmental Protection Agency.

[2] Includes the Department of Health and Human Services, and the National Aeronautics and Space Administration, the National Science Foundation, and the Smithsonian Institution.

[3] Includes the Department of Defense. The 1991 enacted level includes a one-time increase for Defense of about $13 million specifically for upper atmosphere research and associated facilities, including the High Frequency Active Auroral Research Program (HAARP). For the purposes of comparison with 1992 levels, this funding has been excluded.

Landsat.—Acquisition of data from land remote sensing satellites is an important element in understanding global change. The Admininstration is committed to operating the Land Remote Sensing Satellites (Landsats 4 and 5) as long as they are the only operational Landsat satellites, and to completing the development and launch of the next satellite (Landsat 6). The budget proposes $17 million within the Department of Commerce, sufficient to cover the operation of Landsats 4 and 5 through August of 1992 (when Landsat 6 is expected to become operational). Landsat 6 will be operated by, and at the expense of, the Earth Observing Satellite Company.

MISSION *FROM* PLANET EARTH: MANNED SPACE FLIGHT AND SPACE EXPLORATION

These activities include the Space Station Freedom and the space exploration initiative. Together these programs support the goal of expanding human presence and activity beyond Earth's orbit into the solar system. The strategy underlying these activities is composed of two major elements: (1) modify Space Station Freedom to focus on two principal objectives: life sciences and microgravity, and to reduce its operational complexity; and (2) support the "long pole" technology building blocks that will be needed for future manned exploration of the solar system.

Space Station Freedom.—NASA is completing a major review of the design of Space Station Freedom (SSF). The functions of the Space Station will be focused primarily in two major areas: life sciences and microgravity research. The former will provide needed experience in studying the effects of weightlessness and radiation exposure, as a precursor to future missions to the Moon and Mars. The latter will provide the initial benefits from SSF and will lay the groundwork for a new spurt of commercial space activity.

It is expected that the reconfigured design will result in significant advantages over the current program:

- it will place the program on a more sustainable budget path;
- it will simplify the design and permit development in stages, holding closely to current schedules for early utilization;
- it will require less dependence on the Space Shuttle. The restructured program will require fewer Shuttle assembly flights in the near-term, and opportunities to use expendable launch vehicles to support operations will be investigated;

Table C–18. **SPACE STATION FREEDOM**
(Dollar amounts in millions)

	Budget Authority			
	1991 Enacted	1992 Proposed	Dollar change	Percent change
Space Station Freedom:				
Research and Development (excluding FTS)	1,794	2,029	+235	+13
Flight Telerobotic Servicer[1]	106	(55)	(−51)	(−48)
Total, Research and Development	1,900	2,029	+129	+7
Facilities and Program Management	144	185	+41	+28
Total, Space Station Freedom	2,044	2,214	+170	+8

[1] Proposed to be moved in 1992 to Space Research and Technology.

- it will reduce the requirements for extravehicular activity (EVA) for assembly, operation, and maintenance, by more careful consideration of operational requirements in the design, and by emphasizing prelaunch integration and verification of flight systems.
- participation of the European Space Agency, Japan, and Canada will, of course, be continued.

The budget provides $2,029 million for SSF development, an increase of 7 percent over the 1991 enacted level. This amount will support continued progress on development.

A major change has been made in the Flight Telerobotic Servicer (FTS) project. FTS was intended to be one of several systems that would provide early robotic assembly and servicing capability to the Space Station. However, the Space Station design review has revealed that the importance of having FTS available in the earliest stages of Space Station operations has been greatly diminished. FTS no longer represents a "critical path" item. Even so, the FTS robotic technologies, particularly the end-effector technologies, are of great importance in the long-term for the Space Station and the space program generally. Therefore, the budget proposes $55 million to focus the FTS project on technology development, and proposes to move the FTS program to the Space Research and Technology area as part of a broader Automation and Robotics activity.

Space Exploration Initiative.—The President remains firmly committed to his long-term goal, articulated in 1989, of manned and unmanned exploration of the solar system. The budget reflects this commitment by proposing $256 million, an increase of 65 percent, for exploration activities in NASA and the Department of Energy and for related activities in the Department of Defense. For 1992, the budget is based on a strategy of supporting activities focused on key, long-lead technologies that will be necessary for any future exploration endeavors. These technologies are: space surface nuclear power, space nuclear and conventional propulsion, and life sciences and life support technologies.

The technology strategy appears consistent with the evolving approach for space exploration under development by the Space Exploration Initiative Synthesis Group. In addition, the Synthesis Group will identify at least two fundamentally different exploration architectures. For the next few years, the Federal Government will develop these architectures in parallel with the technologies which can make exploration affordable. Only after the technology and architecture groundwork has been firmly laid, will the Administration propose specific new manned and unmanned exploration missions. This suite of exploration technologies will be expanded over time, consistent with the "go-as-you-pay" philosophy recommended by the Advisory Committee.

For space surface nuclear power, the budget proposes to continue the joint NASA/DOD/

DOE SP–100 program, and, in the Department of Energy, to conduct R&D concurrently on radioisotopic thermoelectric generators (RTGs). The focus of 1992 efforts will be on design studies and technology efforts directed at lunar operations using either SP–100 for higher power levels (10s to 100s of kilowatts) or RTGs for lower power levels. Nuclear rocket propulsion appears to offer significant advantages over conventional chemical propulsion, including reduced trip times and reduced mass (thus lower cost). For life sciences and support technologies, the budget again proposes to initiate the Lifesat program. Lifesat will be a series of reusable satellites designed to carry living specimens into orbit, to monitor and study critical parameters such as radiation exposure, and to return the living specimens to Earth for analysis. First launch is planned for 1996.

EXPANDING THE HUMAN FRONTIER THROUGH BIOTECHNOLOGY

Biotechnology holds great promise for new life-enhancing discoveries in the fields of medicine, foods, and environmental cleanup.

The budget proposes $4,107 million for biotechnology R&D, an increase of $319 million, or 8 percent, over 1991. Increasing the Federal investment in biotechnology R&D will spur further advances in this rapidly growing field. In addition, the Administration recently completed a comprehensive review of all other aspects of Federal Government policy affecting biotechnology. The results of this review will be released in a forthcoming report from the President's Council on Competitiveness. Much of the material contained in this section is drawn from the forthcoming report.

SIGNIFICANT ACHIEVEMENTS/NEW TRENDS

The biotechnology revolution began in the 1970s and 1980s when scientists learned new techniques to alter precisely the genetic constitution of living organisms. The newer, most innovative biotechnologies are tremendously diverse and include gene transfer, embryo manipulation and transfer, plant regeneration, and perhaps the most widely known, recombinant DNA technology (rDNA) or "genetic engineering."

Table C–19. **THE BUDGET PROPOSES AN 8 PERCENT INCREASE IN FEDERAL INVESTMENTS IN BIOTECHNOLOGY**

(Dollar amounts in millions)

Department or Agency	Budget Authority			
	1991 Enacted	1992 Proposed	Dollar change	Percent change

Defense	118	123	+5	+4
Other Agencies [1]	17	17	—	—
Total, All agencies	3,788	4,107	+319	+8
(Directly-related activities—non-add)	1,663	1,810	+147	+9
(Broader science-based activities—non-add)	1,998	2,144	+146	+7
(Scale-up activities—non-add)	25	32	+7	+28

[1] Includes the Department of Veterans Affairs and the Environmental Protection Agency.

American researchers developed much of the basic science of biotechnology and the United States continues to lead in the commercialization of most emerging biotechnology products. The new techniques have spawned an industry that has seen rapid growth. Since 1975, more than 400 start-up firms active in biotechnology have been founded. In addition, more than 200 established firms have diversified into biotechnology and there are more than 200 supply firms that support biotechnology with materials, equipment and services in the U.S. alone. Just a decade and a half after its beginnings, the U.S. biotechnology industry produced pharmaceuticals, diagnostic tests, and agricultural products worth close to $2 billion.

Human Health

Biotechnology enables the identification, development and manufacture of disease-fighting substances and provides new techniques for delivering medicines to diseased parts of the body. Remarkable new medicines based on biotechnology are beginning to appear daily. The Food and Drug Administration (FDA) has approved a biotechnology-based vaccine for preventing hepatitis B and eleven other drugs for treating various diseases. More than 1000 clinical trials of new drugs and biologics are underway. A majority of these are for cancer or cancer-related conditions and more than 15 percent are for AIDS or HIV-related conditions. In addition, molecular genetics and biotechnology techniques have enabled the development of a new generation of methods for identifying the genetic causes of disease and aiding medical diagnoses.

Agriculture, Foods, and Animal Husbandry

Scientific advances from biotechnology have not been limited to medicines. Biotechnology is expected to play a major role in improving U.S. agriculture and protecting the environment. Biotechnology offers modern tools for agriculture that can improve nutrition, taste, appearance, and productivity of plant, animal and other food products. Enhancements of certain characteristics in vegetables are expected to provide increased resistance to insects, thus reducing the need for chemical pesticides. Companies are field testing a variety of crops with enhanced resistance to specific viruses, insect pests, and safer herbicides.

An important boost for agricultural biotechnology is research funded through the Department of Agriculture's National Research Initiative. Included within the plant systems category is funding for a plant genome mapping program to locate genes which control economically important traits in crop plants and forest species. Results will help scientists more rapidly and precisely transfer genes to address environmental concerns and improve food quality and safety.

A group of research experts recently convened by the National Institutes of Health (NIH) recommended approving the use of bovine somatotropin (BST), a genetically engineered version of a naturally-occurring growth hormone, in the production of milk. When administered to dairy cattle, BST can increase milk production by as much as 20 percent.

Environment

Biotechnology holds great promise for the environment including products that will clean up the ecosystem, provide alternatives to chemicals, and perform other tasks such as mineral recovery. Bioremediation is a process that involves the use of microorganisms for cleanup of the environment. Certain microorganisms will feed on and degrade hazardous or toxic chemicals and produce environmentally safe substances as by-products. Recent experiments using bioremediation have demonstrated the value of microbes for cleanup of oil spills. Bioremediation is also used for cleansing soil contaminated with gasoline. Microbial degradation of waste and waste water forms the basis of a substantial portion of the waste industry. The availability of new microbial tools for waste management will provide an opportunity for new advances in productivity in this industry.

FEDERAL INVESTMENT

The key to future growth in U.S. biotechnology industry continues to be strong support for basic research and research training. This investment continues to produce the advances in technology that allow the industry to thrive. In 1992, the total Federal investment in biotechnology-related research is proposed at approximately $4.1 billion. Over 80 percent of this investment is supported through NIH. One of the most significant endeavors is the human genome project—designed to map the location of all the genes in the human body—supported by the Departments of Health and Human Services and Energy.

Twelve Federal agencies support programs directly related to or in support of biotechnology, including the Departments of Health and Human Services, Energy, Commerce, Defense, Agriculture, and Veterans Affairs, as well as the National Science Foundation, the National Aeronautics and Space Administration and the Environmental Protection Agency. Most of the support for basic biomedical research essential to the advancement of biotechnology has come from the National Institutes of Health. Many of the agencies are in fields that are poised for substantial growth, such as agricultural and environmental research. The private sector also provides about $2 billion for biotechnology research and development, most of which is committed to specific product development.

The United States biotechnology and other industries were greatly assisted by the technology transfer policies initiated in 1980 and accelerated in the Bush Administration. These policies fostered joint R&D projects between industry and federally supported universities. More recently, this process was extended to federally owned and operated laboratories by protecting private sector commercial rights to subsequent discoveries. Such joint R&D allows industry to gain access to the most advanced government facilities. Implementation of the recently enacted Technology Transfer Act fosters competitiveness in, and commercialization of, biotechnology. Commercialization of university research in cooperation with U.S. industry is an important element of federally supported university research.

The Federal Government is providing strong encouragement for cooperative precompetitive biotechnology efforts among the public sector, university sector and private sector. Over the last five years, scientists at NIH have entered into more than 400 cooperative research and development agreements (CRADAs) with private industry. The majority of these have involved the development of biotechnology, including a gene therapy for AIDS. Other Federal agencies such as the Food and Drug Administration and the Centers for Disease Control are entering into CRADAs.

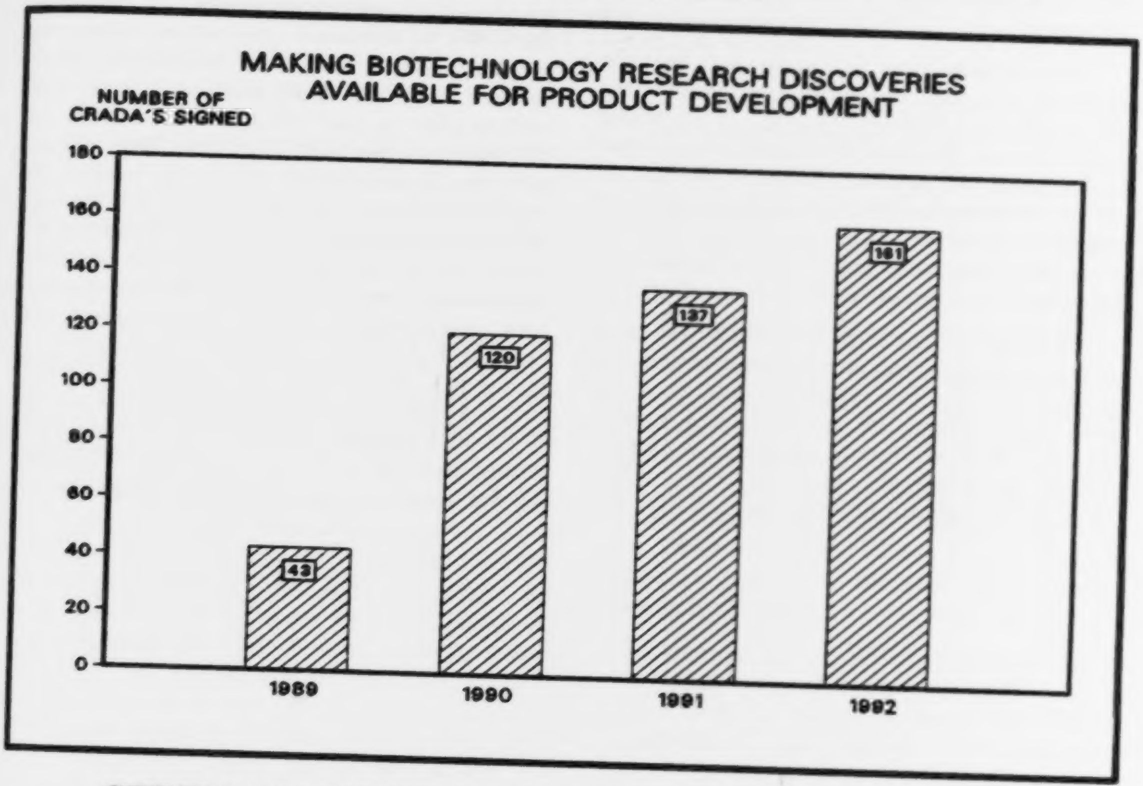
RESEARCH TRAINING

The development of biotechnology research and training centers is an additional approach that may prove effective in promoting interdisciplinary training and promoting industry/university research collaboration. The National Science Foundation now funds two biotechnology engineering research centers at the Massachusetts Institute of Technology and Montana State University. There are a number of other such centers, many established through State initiatives.

FEDERAL REGULATORY ENVIRONMENT

The 1986 Coordinated Framework established a roadmap for Federal regulation of biotechnology. The Framework was developed to address the concerns over the potential adverse impact of unnecessary regulation on biotechnology research and commercial applications and possible risks associated with using genetically engineered organisms in the environment. The Coordinated Framework focuses on the characteristics and risks of the biotechnology product, not the process by which it is created. This principle allows agencies to concentrate resources in areas that may pose greater risks and leaves relatively unfettered the development of biotechnology products posing little or no risk.

Based on the principles outlined in the Coordinated Framework, the Food and Drug Administration (FDA) announced that it did not need to establish new procedures for the review of new biotech-derived products. FDA's review of products based on a case-by-case assessment of risks would address any risks involved in new biotechnology products. The FDA established a system of user fees for the review of drugs and medical devices, including products that use techniques developed through biotechnology. User fees will enable the agency to speed its review of biotechnology products and, in turn, allow firms to bring their products to the marketplace sooner. The other two major regulatory agencies—the Environmental Protection Agency (EPA) and the Department of Agriculture (USDA)—announced policies for developing additional rules and guidelines.



MAKING BIOTECHNOLOGY RESEARCH DISCOVERIES AVAILABLE FOR PRODUCT DEVELOPMENT

STRENGTHENING SCIENCE AND MATHEMATICS EDUCATION

There has been much debate about the health of our Nation's science and technology base and the need to improve this base so we can continue to compete in the global economy. This need is embodied in the national education goals that were established by President Bush and the Nation's Governors.

Since the spring of 1990, the interagency Federal Coordinating Council on Science, Engineering, and Technology's Committee on Education and Human Resources has been developing a strategy to achieve the national education goals related to math and science education. The analysis began with an examination of the science and engineering pipeline.

There are few indicators of student preference for math and science prior to the last several years of high school. Yet after Grade 5, U.S. students' performance on international math and science tests begins to decline until by Grade 9 students score at the bottom. There has been a very stable thirty year pattern of only a few students (5 percent of 22 year olds) earning undergraduate math and science degrees that does not appear to be changing. It is estimated that less than 10,000, or 0.3 percent, of the over 4 million 1972 5th graders will eventually obtain a science or engineering doctorate.

The conclusion from this analysis is that the national education goals can only be achieved if a balanced investment is made in attracting and retaining students throughout the science and engineering pipeline. However, in light of the performance problems mentioned above, it appears that there is a need for a special near-term emphasis on properly preparing and attracting students well in advance of college.

The budget proposes $1,941 million for math and science education as a comprehensive step to help address the problems that limit the pool and performance of math and science learners. This represents an increase of $225 million, or 13 percent, over the 1991 enacted level. At the precollege level, the initiative has as its highest priority increasing the supply of, and improving the skills of precollege mathematics and science teachers. In addition, there will be increased emphasis on improving curricula, developing new educational technologies, and increasing student interest and performance in mathematics and science. Of the total increase of $225 million, $146 million is targeted toward the precollege level, a 28 percent increase over the 1991 enacted level. At the undergraduate level, the initiative focuses on enhancing undergraduate science, mathematics and engineering through curriculum improvements, faculty enhancement and student incentives. Graduate education programs are maintained at roughly the 1991 level. A much more detailed description of this math and science education initiative is included in Chapter IV.A., "Investing in Human Capital and Reforming American Education."

IV.D. IMPROVING THE TRANSPORTATION INFRASTRUCTURE

HIGHLIGHTS

In recognition of the importance of transportation to the national economy, the Administration is proposing substantial increases in Federal transportation infrastructure funding—while attending, also, to appropriate limits on the Federal role and responsibility.

For the Department of Transportation, the budget proposes an overall increase of $2.8 billion, 9 percent above the 1991 enacted level. Two key elements of the Transportation budget proposal are:

- A $1.4 billion increase for highway construction and rehabilitation, from $14.6 billion in 1991 to $16.0 billion in 1992. From 1991 to 1996, highway budget authority will increase by $5.7 billion (39 percent). By 1996, Federal highway spending will exceed $20 billion. The Administration will seek to re-authorize the Federal highway program for 5 years. On a cumulative basis, almost $88 billion will be provided for highway construction and rehabilitation over the next 5 years. As part of this reauthorization, the Administration will propose to target funds on a new National Highway System and consolidate other funding into a new, flexible block grant program for other roads.
- A $1.3 billion increase for aviation programs, from $7.9 billion in 1991 to $9.3 billion in 1992. This includes a $0.6 billion increase for continued modernization of the air traffic control system and a $0.4 billion increase to operate the system.

Americans spend nearly $800 billion for transportation products and services annually. In 1988, the U.S. recorded 3.6 trillion passenger-miles of travel and 3.6 trillion ton-miles of freight traffic. Transportation and transportation-related businesses employ one-tenth of the American work force. As a share of consumer spending, transportation accounts for almost 20 percent of the total.

Investment by all levels of government in the Nation's transportation systems—such as roads, airways, and mass transit is crucial to the health of the Nation. As the economy grows and changes, so too will the need for transportation infrastructure services. Recent growth in the demand for transportation services is shown in the accompanying chart ("Growth of Transportation Services and Real GNP").

PROVIDING HIGHWAYS FOR THE NEXT GENERATION

The Administration is proposing significant increases in Federal highway spending—from $14.6 billion in 1991 budget authority to $20.3 billion in 1996 (+39 percent). Over the 5-year authorization period, 1992–1996, total expenditures from the Highway Account of the trust fund, will exceed tax receipts from the public by about $2.4 billion. Obligations are projected to exceed receipts by $9.2 billion over the same time period and in every year Federal obligation levels are expected to exceed receipts from the public. The authorizations in the Administration's proposed legislation will exceed those in the 1987–1991 highway bill by $16.8 billion.

Consistent with the Administration's National Transportation Policy, the Administration's proposal will recast the objectives of the system, its structure, its financing, and the Federal/State/local government interrelationships. The proposal recognizes that the highway system is largely built, and that needs and priorities have shifted to the preservation and improvement of a mature highway system.

The Federal highway program has evolved through an historical process which has resulted in the layering of system upon system, activity upon activity. Over time, it has lost its coherent structure and covers a road network that provides substantially different Federal, State and local benefits. The Federal financing system is inadequately focused on meeting national needs. As the next reauthorization bill is debated, the highway program should be evaluated in the context of changing responsibilities and abilities among the Federal Government and its State and local partners.

Administration Highway Proposals.—Consistent with these views, the Administration is proposing a new highway program with the following elements:

- creation of a "National Highway System" which concentrates Federal resources on the rehabilitation and improvement of

Table D–2. **THE FEDERAL COMMITMENT TO AN IMPROVED HIGHWAY SYSTEM**

(In billions of dollars)

	1991	1992	1993	1994	1995	1996	Percent change, 1991–96
Budget authority	14.6	16.0	16.3	16.8	18.3	20.3	+39
Outlays	14.4	15.2	16.4	16.7	16.8	17.9	+24

highways which are most critical to interstate travel and commerce;

- establishment of a highway block grant program which will consolidate many narrow categorical highway grant programs into a larger and more flexible program, termed the "Urban/Rural Program."
- additional Federal assistance for bridge rehabilitation and replacement; and
- encouragement of innovative financial and management techniques for highways, especially through greater use of toll roads.

All of the above features will provide State and local partners with greater flexibility to:

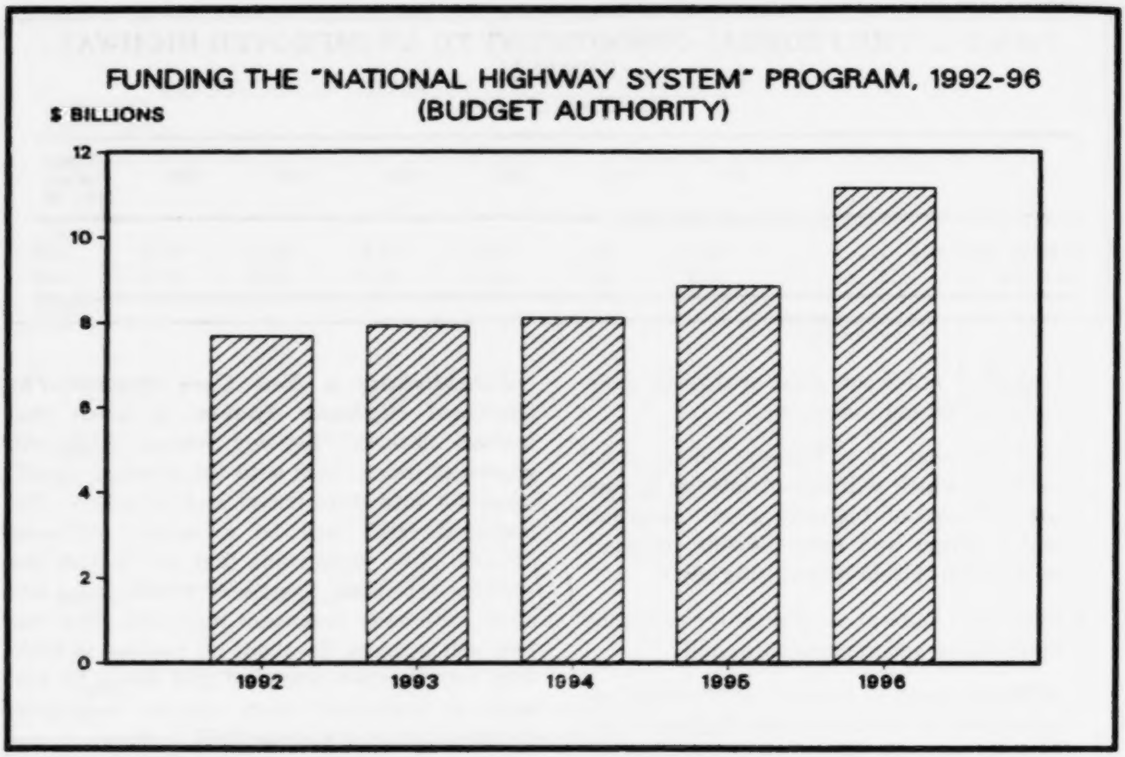
- choose, in conjunction with the Department of Transportation, which highways should become part of the National Highway System;
- select which highway or transit projects will receive block grant support; and
- use new or alternative financing techniques.

The Administration's highway reform proposals, and the projected funding increases, will ensure that the physical condition of the Nation's highways will continue to improve; that the backlog of deficient bridges will be addressed; and that through reduced federal restrictions and increased programmatic flexibility, the needs of the nineties will be met. Together, they will increase the ability of States and localities to invest in those projects which provide the greatest benefits while maintaining a safe and productive system of national highways.

Establishing a New Core System—The National Highway System.—A newly designated National Highway System (NHS) will consist of those roads with the greatest significance for interstate travel and commerce. The proposed NHS will be a system of some 150,000 miles nationwide that will include the existing Interstate System of 43,000 miles and other nationally important highways. This system will account for about 40 percent of highway vehicle miles travelled and about 70 percent of interstate motor carrier commerce. (Federal funding for the NHS is shown in the accompanying chart, "Funding the 'National Highway System' Program, 1992–96".)

The NHS will be an interconnected system that will serve major population centers, ports, airports, and international border crossings; meet national defense requirements; and serve interstate and interregional travel. It will incorporate the Interstate System, but it will also reflect the major demographic and travel changes that have occurred since the Interstate routes were designated. Creation of the National Highway System will be accomplished through a cooperative effort between the States and the Department of Transportation.

The Federal share for projects on the new National Highway System will be 75 percent, except for rehabilitation on the Interstate System which will remain at 90 percent. A 75 percent Federal match is the ratio which now pertains to the Federal-aid primary, secondary and urban systems. Building on the accomplishments of the soon-to-be-completed Interstate System, the new NHS will encourage investment in cost effective arterial highways.



FUNDING THE "NATIONAL HIGHWAY SYSTEM" PROGRAM, 1992-96 (BUDGET AUTHORITY)

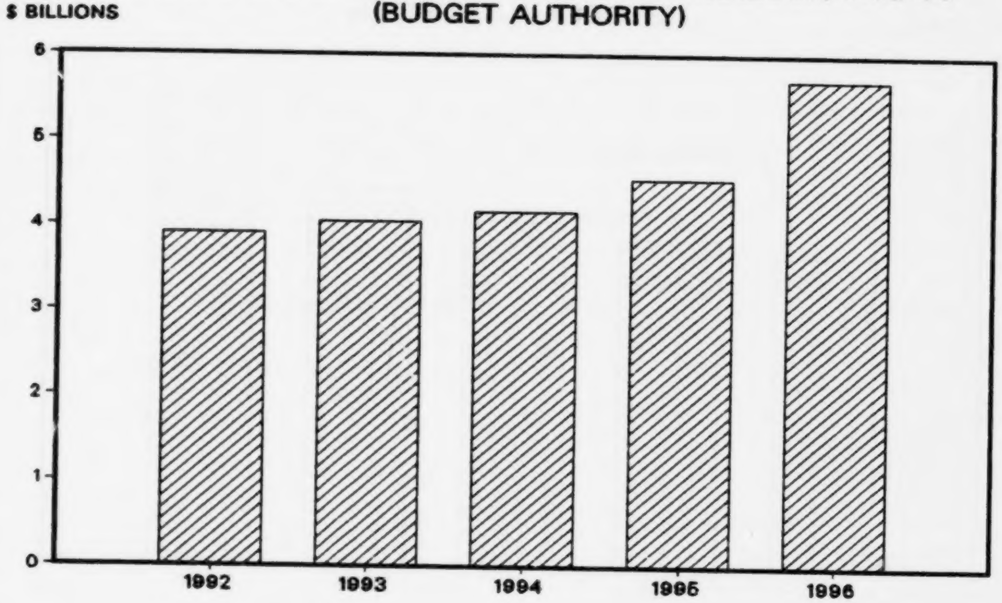
The proposal will continue the recent improvements in the condition of highway pavement. In 1982, 14 percent of the Interstate System was classified as being in "poor" condition. By 1989, the percentage had dropped to 11 percent. By 1996, it is projected that the percentage of pavement on the Interstate System that is in poor condition will have decreased to about 9 percent.

Providing Flexibility: the Urban/Rural Block Grant.—The second major change to the highway program will be the creation of a new block grant for Federal highway assistance—the Urban/Rural Program (URP). The URP Program has three major program elements:

- States will be able to expend URP funds generally on any project currently on the Federal-aid urban, primary, and secondary highway systems. The existing categories which compartmentalize Federal highway spending will be broken down. These programs will be consolidated into this new grant mechanism.
- States will receive approval of an overall program plan rather than for each and every project they initiate. States will simply certify that their projects meet applicable Federal standards and provide annual reports on fund usage. (The Federal Government will review and audit these plans to ensure proper compliance.) As a result, more expeditious highway construction can be expected.
- States will be able to expend URP funds on mass transit capital projects, thereby further providing flexibility to States and localities.

Under the Administration's proposal, the percentage of project costs paid by the Federal Government will be set at 60 percent for most projects. With a higher financial stake invested in highway projects, sponsors will carefully weigh alternatives before selecting projects. (Federal funding for the Urban/Rural highway program is shown in the accompanying chart, "Funding the Urban/Rural Highway Program, 1992–96".)

FUNDING THE URBAN/RURAL HIGHWAY PROGRAM, 1992-96
(BUDGET AUTHORITY)

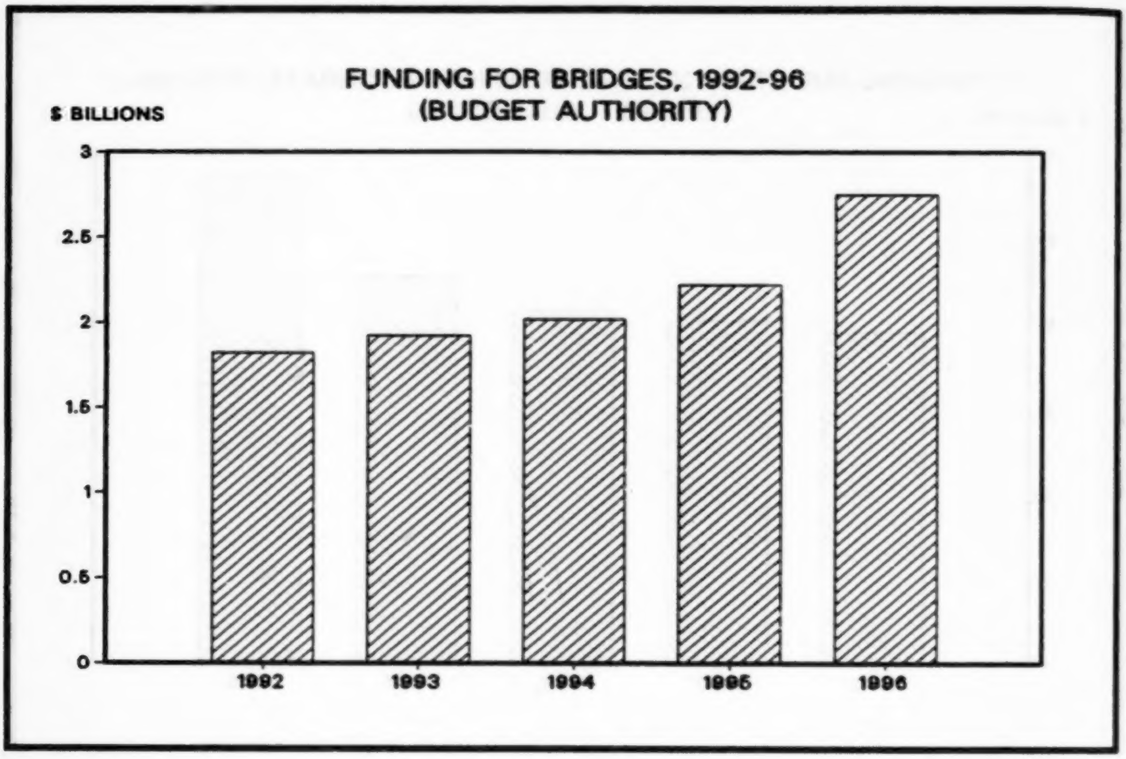


Rebuilding the Nation's Bridges.—Bridges will benefit from an increased emphasis on rehabilitation. Since 1984, the number of structurally deficient interstate bridges has increased from 5.1 percent of the total to 7.2 percent. The increased funding provided over the next 5 years should arrest this trend, and should reduce the number of bridges that are structurally deficient by about one-third over the next 5 years. (Federal funding for the Nation's Bridges is shown in the accompanying chart, "Funding For Bridges, 1992–96".)

Fostering Partnerships with the States and the Private Sector—Permitting Alternatives.—Highway transportation has benefitted from a long tradition of Federal-State-local-private partnership, a partnership that has built and maintained most of the system. The partnership represents a foundation the Nation can build upon. New partners are also emerging. For example, in Virginia and California, private entrepreneurs have stepped forward to plan, finance and build new toll roads with minimum direct State/local involvement.

The Administration's proposals will eliminate burdensome restrictions on creative solutions to highway financing needs, thus accelerating the trend of private sector participation. States will be permitted to use Federal funds for the construction of toll roads, including those in which there is private participation. For example, they will be permitted to use their NHS or URP funds to improve existing toll roads or rebuild existing toll-free non-Interstate highways to restricted access and then charge tolls.

Investing in New Technologies.—Highway capacity needs cannot be met through new construction alone. Part of the solution must lie in innovative technologies. The 1992 budget provides $60 million, $37 million more than provided in 1991, for Federal research and development funding for Intelligent Vehicle/Highway Systems (IVHS), often referred to as "smart cars/smart highways." IVHS will use state-of-the-art electronics, communications, and computer technology to improve traffic control systems, warn drivers of dangerous sit-



FUNDING FOR BRIDGES, 1992-96
(BUDGET AUTHORITY)

uations, and make more efficient use of the existing road system. For example, traffic signalization could be controlled in a more sophisticated way, allowing real time adjustments to be made to compensate for actual traffic situations and disruptions. Currently, most systems are simply synchronized and some change depending on time of day. Expected benefits of IVHS include reduced congestion, reduced fuel consumption, improved air quality, and increased safety.

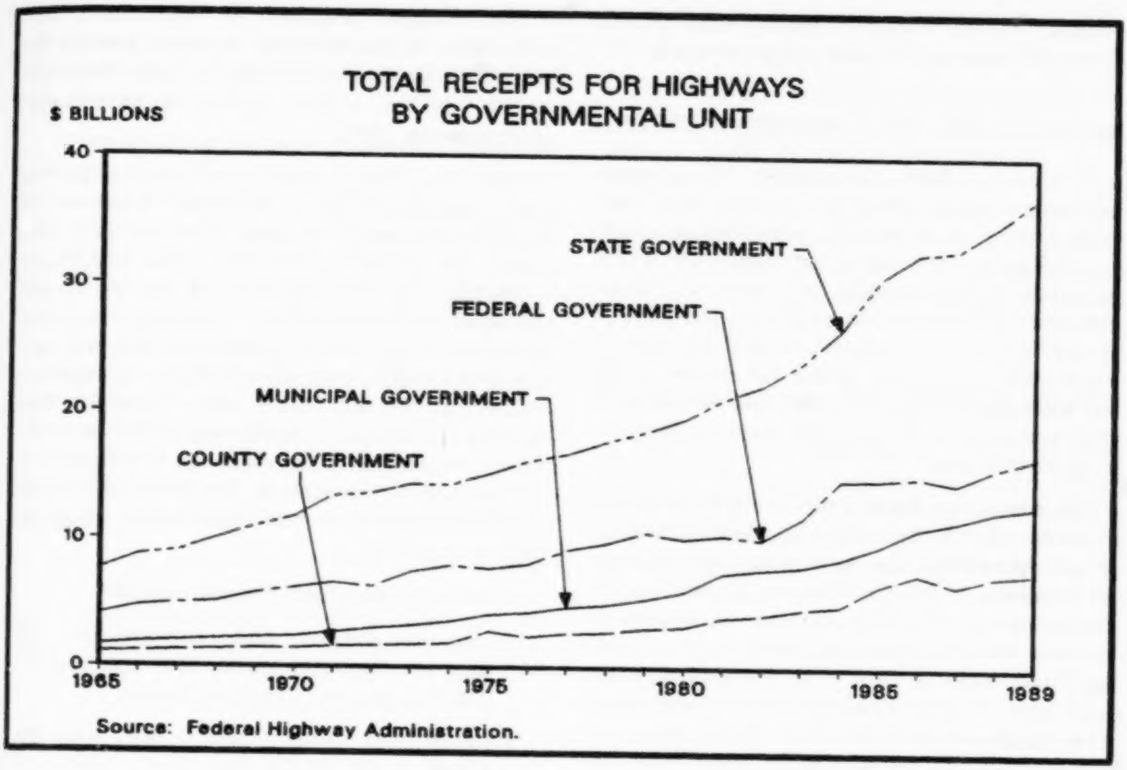
The Administration also proposes to continue to examine the economic and technical feasibility of alternative high-speed surface systems, including high-speed rail and magnetic levitation transportation. Federal research is focused on the identification of commercially viable technologies.

Working with States and Localities.—As the Federal Government increases its commitment to the highway program, it expects that the States and localities will continue to support the program as well. To date, the States have been highly responsive in fulfilling their role as partners with the Federal government. For example, in the aftermath of the 1982 Federal motor fuels tax increase, States substantially increased their financial commitment to highways (see accompanying chart, "Total Receipts for Highways By Governmental Unit").

Ensuring a Safe Highway System.—The Administration's authorization proposal will contain a requirement that States use at least 10 percent of their apportioned Federal highway funds for projects that promote safety. This will provide about $1.5 billion in 1992, increasing to $1.9 billion in 1996. In addition, the proposal will contain safety programs to reduce drunk driving and encourage States to adopt safety countermeasures.

SUPPORTING MASS TRANSIT INFRASTRUCTURE

America's transportation network consists of separate but largely complementary systems, each meeting a different set of needs. While the highway system is largely concerned with providing the underlying facilities for moving people and goods, mass transit systems are exclusively devoted to the movement of people.



TOTAL RECEIPTS FOR HIGHWAYS BY GOVERNMENTAL UNIT

Source: Federal Highway Administration.

The benefits of mass transit are largely local. While the Federal Government may assist in improving the mass transit infrastructure, the ultimate responsibility resides with States and localities.

The Administration's 1992–1996 mass transit re-authorization bill will propose the following elements:

- *Investment in Mass Transit Capital Improvements.*—Increasing the share of the Federal mass transit dollar that is spent for capital improvements to assure that the existing mass transit infrastructure does not deteriorate and, in fact, improves. This goal can only be accomplished in cooperation with State and local governments and the private sector. These groups must work to assure that the mass transit infrastructure enhances mobility and that it is well maintained and effectively used. To meet its portion of this partnership, the Administration proposes to increase Federal mass transit capital spending from about $2.4 billion in 1991 to about $2.9 billion in 1992.

- *Equitable Distribution of Fuel Tax Receipts.*—Distributing approximately 80 percent of mass transit funds by formula, compared to the existing program which distributes about 60 percent of the funds by formula. This policy change will ensure that the nationally collected motor fuels tax is equitably distributed to all sections of the country.

- *Increased Local Responsibility.*—Limiting spending for the construction of new transit systems to those projects which are cost effective.

- *Trust Fund financing of Transit.*—Financing almost all Federal mass transit programs out of the Highway Trust Fund (only 43 percent of Federal mass transit funds are currently derived from the Trust Fund). The Trust Fund can and should finance Federal mass transit expenditures, thereby minimizing the burden on general taxpayers for support of these services.

The budget would also provide State and local governments with the flexibility to decide whether to use Federal highway and transit funds for highway or mass transit projects.

MODERNIZING THE AVIATION SYSTEM

By the year 2000, the number of passenger enplanements is forecast to increase by 48 percent. Failure to respond to increased demands would lead to an aviation infrastructure which is increasingly congested and obsolete. To accommodate increased demand and the need to modernize, the Administration will continue to work with all aviation groups to assure a safe and efficient system. For 1992, the Administration proposes a 17 percent funding increase to meet this goal.

Operating a Safe and Secure Aviation System.—For Federal Aviation Administration (FAA) operations, the Administration requests $4.5 billion, a $0.4 billion or 10 percent increase over 1991. This increase is needed to sustain current operating levels and provide staff increases to deal with forecasted workload growth and scheduled commissioning of new equipment and facilities. The staffing increases will add 450 air traffic controllers, 100 aviation safety inspectors, 260 maintenance technicians and additional security inspectors.

Modernizing Aviation Equipment.—The FAA developed the National Airspace System (NAS) Plan in the early 1980s to modernize the air traffic equipment. Nearly all of the original NAS Plan projects are now under contract and new equipment and systems are already installed and integrated into the current system.

The budget proposes to continue modernization of the national airspace system by providing increased funding for FAA facilities at $2.7 billion, a $0.6 billion or 29 percent increase over 1991.

Now that the research and design phases are completed, FAA is expecting deliveries of several equipment systems over the next few years. In the spring of 1991, FAA will begin installing the first segment of the Advanced Automation System (AAS). The AAS includes computer software and hardware that will improve air traffic controllers' ability to manage additional aircraft safely and efficiently. The AAS is the largest undertaking in the air traffic modernization plan. When all five segments of the AAS are installed, the aviation system should benefit from increased safety, capacity and productivity.

Other modernization projects include:

- computer software and hardware that will improve computer speed, capacity, and reliability in order to reduce delays;
- radars and radar displays that will improve an air traffic controller's ability to "see" aircraft, keep them safely separated, and correct conflict situations before aircraft are placed at risk; and
- weather tracking systems that will detect dangerous windshear conditions and warn aircraft away from violent storms.

Modernization of the air traffic equipment will result in greater operating efficiency and safety, with airline passengers reaping most

Table D–3. **THE TOTAL FEDERAL COMMITMENT TO AVIATION**

(In billions of dollars)

	1991	1992	1991–92	
			Dollar change	Percent change
Budget Authority:				
Operations	4.0	4.5	+0.4	+10
Equipment	2.1	2.7	+0.6	+29
Airport grants	1.6	1.9	+0.3	+19
Research	0.2	0.2	0.0	+2
Total	7.9	9.3	+1.3	+17

of the benefits of modernization. Over a 20 year period, it is estimated that more than $114 billion in benefits will be derived from modernization.

Encouraging Airport Capacity Improvements.—For airport grant funding, the Administration requests $1.9 billion. During FAA's 1991 re-authorization, Congress accepted the Administration's proposal to allow airports to collect passenger facility charges (PFCs). A PFC is a charge levied on departing passengers by airports for the use of aviation facilities. Some estimates show PFCs could generate about $1 billion per year for the top 100 U.S. airports. The ability of airports to charge PFCs should provide airports with a stable, non-federal source of funding that will help address the growing airport capacity problems.

Recently, many airports have found it financially difficult to add capacity as quickly as the system demands. Airports have incurred high debt burdens in an attempt to eliminate increasing airport congestion. PFCs offer a new non-Federal source of revenue for airport development. PFCs can help commercial service airports, but hub airports may be the most significantly affected. One survey estimates a $3 PFC could generate as much as 30 percent of total revenues raised at hub airports.

In 1988, the country had 21 major airports that experienced more than 20,000 hours in annual flight delays. Unless capacity is expanded, the number may grow to 41 airports by 1998. Combining PFCs with Federal and other funds (such as rental payments from airlines and other tenants) will provide airports with the funding needed to address forecasted airport congestion.

RESEARCH FOR THE FUTURE SYSTEM

The budget includes $210 million for aviation research and development. A significant amount of research and development activities will focus on enhancing the current air traffic control system and preparing for future systems. For example, the FAA is researching and defining the next generation of air traffic control equipment. This funding will also continue research in the critical area of metal fatigue and corrosion to detect problems with aging aircraft. Funds will be provided to develop improved systems and devices for detecting explosives in checked and carry-on baggage.

IV.E. PRESERVING AMERICA'S HERITAGE AND PROTECTING THE ENVIRONMENT IN A GROWING ECONOMY

HIGHLIGHTS

The budget places a major emphasis on efforts to protect and enhance America's natural resources and the environment within the context of policies to promote economic growth. Major increases are proposed to:

- Protect, preserve and expand America's national treasury of parks, forests, wildlife refuges, and other public lands.
- Greatly enhance the access of American citizens to public lands and recreational opportunities.
- Initiate a program that will protect some of the Nation's most important Civil War Battlefield sites.
- Increase coastal protection, through a new interagency action plan; enhanced oil spill prevention and response activities; and resources for treating municipal sewage discharges to coastal waters of Boston, Seattle, Los Angeles, San Diego and New York City.
- Enhance the effort to protect and accelerate the recovery of threatened and endangered species while reducing conflict with economic activity by managing habitat on a multi-species basis.
- Take further steps toward the President's national goal of achieving "no net loss" of wetlands by protecting critical habitat, and by expanding wetlands research.
- Continue the President's commitment to effective pollution control and environmental enhancement by implementing re-

[2] Includes a proposed $340 million 1991 supplemental for Environmental Restoration and Waste Management.

cently enacted environmental legislation, including the Clean Air Act.

- Ensure that the Federal government does its part toward environmental improvement by continuing programs to clean up Federal facilities, both nuclear and nonnuclear.
- Expand global change research for the second year and thereby extend America's international leadership in this area.
- Preserve America's heritage.

THE BUDGET INCLUDES AN INCREASE OF 40 PERCENT TO EXPAND AND PROTECT AMERICA'S TREASURY OF NATIONAL PARKS, WILDLIFE REFUGES, FORESTS AND PUBLIC LANDS.

America's treasury of public lands is among her most important assets. The budget reflects the President's commitment to the outdoors by providing the resources to expand, improve, and maintain these assets, and to increase the access of all Americans to them.

The budget amplifies the joint Department of the Interior (DOI) and Department of Agriculture (USDA) initiative, *America the Beautiful* (ATB), begun last year. The budget provides nearly $1 billion (40 percent above 1991) for improved stewardship of National parks, wildlife refuges, forests, and other public lands. ATB resource protection and enhancement activities are increased by $188 million, or 76 percent above 1991 enacted levels and Federal land acquisition is increased by $70 million over the President's 1991 budget proposal.

This initiative includes the following features:

Enhancing Recreation and Restoration of Natural Resources.—An important component of America the Beautiful will focus Federal funding and expertise on a wide range of threatened natural resource treasures and key Interior recreational areas in need of improvement. The budget includes $329 million (33 percent above 1991) for improved resource protection, including wetlands conservation and restoration, endangered species activities, and enhanced recreational opportunities in national parks, wildlife refuges, and other public lands.

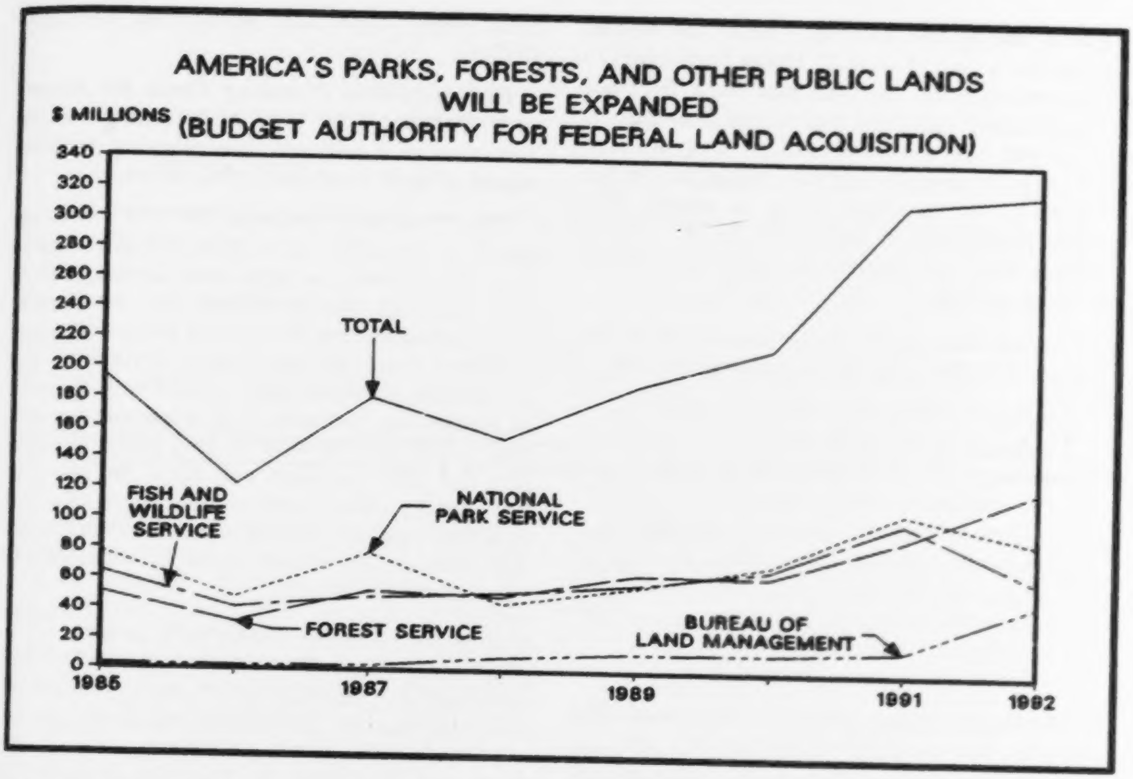
The initiative will increase the number of boat ramps, campsites, trails and interpretive centers for America's growing population of outdoor enthusiasts; improve the access of disabled Americans to our public lands; and ensure that key environmental features of these lands are not threatened. Included in the program will be the establishment of a new America the Beautiful pass, specially designed for use of repeat visitors to national parks, forests, and other lands.

Land and Water Conservation Fund (LWCF).—The budget continues the President's commitment to the acquisition of nationally significant natural and cultural resources. Proposed 1992 funds for Federal land acquisition and LWCF State grants would be $350 million, an increase of $8 million, or 2 percent over the appropriated amount for 1991.

Concurrent with the submission of the budget, the Administration will propose to Congress a list of priority lands to be acquired by the National Park Service, the Fish and Wildlife Service, the Bureau of Land Management, and the Forest Service. This list has been developed through a competitive rating system, in which particular importance is placed on valuable wetlands, proximity to population centers, increased recreational opportunities to the public, protection of endangered species, and other characteristics of such national significance that the land's early acquisition for public purposes is of special importance. Of the total funding available to the Fish and Wildlife Service, $3 million is proposed for the National Fish and Wildlife Foundation.

The President's outdoor program reflected in this budget includes full funding for efforts such as land acquisition at Santa Monica Mountains (CA), and implementation of legislation to expand the Everglades National Park (FL).

The budget also re-starts a funding and acquisition partnership with States through the LWCF State Grant program (the first time in ten years that funds for these grants are being requested). Requested funding for 1992 of $30 million would provide States with Federal matching funds for the acquisition of parks



AMERICA'S PARKS, FORESTS, AND OTHER PUBLIC LANDS WILL BE EXPANDED (BUDGET AUTHORITY FOR FEDERAL LAND ACQUISITION)

and open spaces, and for the development of outdoor recreation resources.

Protecting Battlefields.—The budget contains $15 million for a new initiative, the *American Battlefield Protection Program*. In addition, the LWCF State grant request includes a proposed earmark of $6 million for grants to support State and local protection of battlefield sites. While some Civil War Battlefields are managed by the National Park Service, many important sites remain unprotected and are threatened with development, without their historic values being taken into account. In order to meet this challenge the Administration is proposing a new initiative to:

- Develop partnerships with Federal, State, regional and local officials and private conservation organizations to provide protection of threatened sites. Efforts will be made to explore all options for their protection, including creative use of public and private land-use tools, such as zoning, historic district designation, land and easement acquisition, technical assistance, and landbanking.
- Develop and disseminate information on public/private demonstration projects to protect battlefields.
- Apply limited Federal funds toward promoting protection through leveraging the purchase of land by private conservation organizations and other public agencies.

The Department of the Interior has identified priority battlefields that would be part of the initiative's first phase, including:

—Gettysburg (PA)
—Antietam (MD)
—Wilderness (VA)
—Shenandoah Valley (VA)
—Harpers Ferry (WV)
—Kennesaw Mountain (GA)
—Corinth (MS)
—Franklin Battlefield (TN)
—Glorietta Pass (NM)

Targeted Parks: America's Crown Jewels.—To help meet the increasing demand for public use of the national parks, the budget proposes a new Targeted Parks Initiative. In conjunction with the National Park Service's 75th Anniversary celebration, the President is proposing a special $10 million program that will improve monitoring and protection in ten "crown jewel" national parks to ensure that these parks remain accessible to all, and to protect fully the natural beauty which makes them so popular.

The national parks under consideration for inclusion in the targeted parks program are:

—Cape Cod National Seashore (MA)
—Acadia National Park (ME)
—Death Valley National Park (CA)
—Everglades National Park (FL)
—Grand Canyon National Park (AZ)
—Glacier National Park (MT)
—Olympic National Park (WA)
—Sequoia National Park (CA)
—Yellowstone National Park (WY)
—Yosemite National Park (CA)

Challenge Cost-Share Programs.—The America the Beautiful initiative will also encourage expanded partnerships with private parties and State and local governments through new challenge cost-share programs for the Park Service and Fish and Wildlife Service. Federal funds will be matched by non-Federal contributions for the protection and enjoyment of parks and refuges. Modeled after the successful programs already ongoing in the Forest Service and the Bureau of Land Management, these new programs will involve the public in improving natural resources by increasing direct citizen efforts and financial contributions.

The Endangered Species Program.—Funding increases of $10 million would allow for a re-prioritization of this program to include increases for prelisting, recovery, and delisting activities. Management of multi-species ecosystems for biodiversity should significantly limit the number of conflicts related to the preservation of individual species. The new multi-species approach will protect threatened and endangered species while at the same time permitting economic activity. For example, under the prelisting process, critical wildlife habitat that would need protection would be identified, while areas where economic activity could safely take place would also be identified.

Reforestation: Planting Trees for America's Future.—The 1991 budget proposed the initiation of a national tree planting program aimed at both rural and urban areas.

The President's proposal for 1991 was enacted in the 1990 Farm Bill, and $70 million was appropriated to begin tree planting activities. Although the legislation did not provide full funding for the President's goal of planting 1 billion trees per year, each state now has a coordinating committee to develop a network of leadership, expertise and corporate and private sector involvement in tree planting activity. The 1991 program will allow for planting and timber stand improvement of nearly 100 million trees on 150,000 acres in rural areas and another 15 million trees in communities throughout the country.

Also in 1991, the President's proposed National Tree Trust Foundation was enacted and capitalized with a one-time appropriation of $20 million. The Foundation will direct its resources toward public awareness and private fund raising efforts to mobilize individuals, businesses, governments, and community organizations to plant and care for trees in cities and towns throughout America.

The 1992 budget contains funds to expand the reforestation initiative begun in 1991. The budget proposes $140 million to expand tree planting and care activities on privately-owned rural lands and in the Nation's 40,000 rural communities. The President's goal remains to plant, maintain, and conduct timber stand improvements on one billion trees per year.

The continuation of the initiative recognizes the remarkable value of trees as a resource. In addition to their use for wood products and wildlife habitat, trees sequester carbon dioxide from the atmosphere; provide for reductions in energy consumption by providing shade in summer and wind abatement in winter; and reduce erosion and the flow of pesticides into the Nation's lakes and streams.

The National Forest: America's Great Outdoors.—The budget includes funds for a 3-year, $625 million effort to enhance outdoor recreation opportunities on National Forest lands, thereby meeting the increasing demands

Table E–2. AMERICA THE BEAUTIFUL

(Buget authority; dollar amounts in millions)

Funding Summary	Actual		1991 Enacted	1992 Proposed	1992–93	
	1989	1990			Dollar Change	Percent Change

Department of the Interior	157	174	247	329	+82	+33
Other Agencies "coastal America"	—	—	—	18	+18	....
Total, America the Beautiful	363	411	659	925	+265	+40

for recreation on forest lands and helping to reduce the current overcrowding of other Federal recreational facilities, including the National Parks. Under the initiative, attention will be focused on providing those recreational services where National Forest System lands have a comparative advantage. Emphasis will be placed on recreation management on lands adjacent to urban areas and on specially designated areas such as National Recreation Areas and the Wild and Scenic Rivers System.

Upon completion of this program, the Forest Service will have in place recreation and trail facilities that will assist in meeting rapidly increasing recreation demand on National Forests and other public lands. Specifically, the program will address high demand areas such as urban forests, scenic byways and specially designated recreation areas. The program will increase the number of new visitor centers for priority urban forests, and generally expand and enhance camping and picnic facilities in order to meet the needs of the public well into the next century. In addition, through partnership arrangements with the private sector, a better mix of recreation opportunities, including added facilities more suitable for the elderly and handicapped, would be provided.

The program will also include the upgrade of restroom facilities, provide for additional interpretive services, the expansion of scenic byways and added investments for cultural resources, as well as fish and wildlife activities. This initiative will help to implement the Secretary of Agriculture's 1990 Forest and Rangeland Resources Planning Act (RPA) program to begin reducing a nearly 50-year backlog of recreation enhancement needs. As a result of this program, the backlog would be removed in 10 years.

LEGACY 1999

The budget continues and expands the Legacy 1999 effort, begun in 1991, to leave a legacy of improved conditions at national parks, wildlife refuges and other public lands.

The Department of the Interior is committed to accomplishing these improvements by the end of the decade—its 150th anniversary as a Department—and hence has designated this effort "Legacy '99". The budget proposes funding of $823 million, an increase of $4 million over 1991, to repair and rehabilitate facilities, to reduce the backlog of facility rehabilitation projects, including the repair of unsafe dams and the cleanup of hazardous materials, and to improve the maintenance of these facilities.

Higher funding levels will accelerate the restoration of important facilities in existing parks and recreation areas and improve the day-to-day operating maintenance of Interior facilities such as visitor centers, campgrounds, roads, boat ramps, and administrative buildings. This increased funding will also allow Interior to upgrade its infrastructure on a periodic basis to prevent long-term deterioration that could threaten public safety and ultimately increase costs to the Federal taxpayer.

Included in Legacy '99 are funds for certain facilities of special importance:

- $11 million to restore waterflows to the Everglades National Park.
- $4 million to rehabilitate the existing Baldridge Hall to create a new White House Visitors Center that would house exhibits and interpretive media and better accommodate the millions of visitors to the White House each year.
- $5 million for construction and rehabilitation of the Federal Interagency Fire Center in Boise, Idaho, that will enable Interior and the Forest Service to improve operations and coordination of national wildland firefighting programs.

Funds for key dam safety improvements, needed to protect people and the environment downstream, will be increased to $123 million, $19 million over 1991 levels, in the Legacy '99 initiative. In addition, $80 million in new funding, $21 million over 1991 levels, will accelerate the evaluation and clean up of hazardous waste sites located on federally managed lands.

Complementing Legacy '99, the budget also proposes the establishment of a $5 million Natural Resource Damage Assessment fund within Interior. This is similar to a $5 million revolving fund created in the National Oceanic and Atmospheric Administrative Act in 1991. The fund will support timely, comprehensive high priority damage assessment activities, litigation strategies, coordination with other agencies, and negotiations with parties potentially responsible for damage to Interior's lands and natural resources.

This identified funding will allow Interior to fulfill its obligation to this and future generations to protect natural resources and the public's use of these resources; increase the likelihood that polluters, not taxpayers, will pay for the cost of restoring injured resources; and help prevent hazardous substance and oil spill incidents from occurring in the future.

Also complementing Legacy '99 is increased funding in the budget from the Department of Transportation's Federal Highway Trust Fund (a total of $190 million, or 36 percent over 1991) for public roads inside national parks and on Indian reservations. There are about 8,000 miles of park roads and parkways and approximately 20,000 miles of roads on reservations under the jurisdiction of Interior. Both road systems provide critical, sometimes unique access to parks and reservations, and are necessary for the full use and enjoyment of parks, and for economic and social development of Indian reservations.

Based on recent road condition inventories, a substantial backlog of needed improvements exists for the two systems. The only sources of funding for improvements of roads under Interior's jurisdiction are Federal appropriations. The proposed 1992 increases will help to stabilize the overall condition of paved roads in parks and on Indian reservations, minimize further deterioration of the road systems, and begin reducing the backlog of needed improvements.

In addition to Interior, $100 million (82 percent over 1991) is proposed for the approxi-

Table E–3. LEGACY '99—DEPARTMENT OF THE INTERIOR

(Budget authority; dollar amounts in millions)

	Actual		1991 Enacted	1992 Proposed	Percent Change, 1991–92

Total	517	563	819	823	+1

mately 25,000 miles of State and local roads that serve national forests under the jurisdiction of USDA's Forest Service.

THE BUDGET BEGINS A MAJOR PROGRAM TO IMPROVE THE NATION'S COASTAL WATERS

Coastal America program.—The budget contains $23 million for a major new initiative to protect the Nation's coastal resources. The EPA, Commerce, the Army Corps of Engineers and Interior will focus on preservation and cleanup of polluted coastal estuaries and eroding coastal wetlands. This is a practical, action-oriented approach to protection and restoration of coastal resources. The program builds upon the existing expertise of these agencies and provides a framework for activities at the national, regional, and watershed levels.

Secondary treatment for municipal discharges.—Because one of the major sources of coastal pollution is the discharge of municipal sewage, a special effort is included in this budget to accelerate the achievement of secondary treatment levels in several major coastal cities. EPA's wastewater treatment program has been funded in the budget at a total level of $1.9 billion, consistent with authorized levels. The bulk of these funds will be appropriated as grants to capitalize State revolving funds which make loans to municipalities for meeting wastewater treatment needs.

However, the budget proposes to target $300 million in grants to coastal cities with the biggest remaining secondary treatment needs—Boston, New York, Los Angeles, San Diego, and Seattle. The $100 million earmarked for Boston exceeds the current special authorization for Boston by $80 million. An additional $100 million is included to build a major treatment facility at the U.S.-Mexican border, which is separately authorized by the Clean Water Act. The facility will treat raw sewage discharges from Tijuana into the Tijuana River. These discharges have severely affected a National Wildlife Refuge and have caused the closing of beaches around San Diego for the past several years.

Oil spill cleanup funding is increased significantly.—Major increases in funds are proposed for the Coast Guard to improve the response to, and the cleanup of, oil spills along the nation's coastline. The Coast Guard budget proposes $108 million for oil spill prevention and response activities, a $15 million (17 percent) increase over 1991. These resources will be used to provide equipment, training and personnel for the Coast Guard's Marine Environmental Protection Mission. The budget for EPA includes an increase of more than 60% for oil spill activities.

Outer Continental Shelf (OCS) Environmental Studies.—The budget proposes an increase of $14 million over the 1991 enacted level to support the environmental studies program in the Minerals Management Service. The $38 million request will be used to respond to the President's directive in June 1990 to upgrade the consideration of environmental effects before proceeding with oil and gas leasing and development in certain areas of the OCS. The environmental studies program provides scientific and technical information on environmental, social, and economic effects of oil and gas activity so that responsible leasing decisions can be made.

Table E–4. **COASTAL AMERICA**

(Budget authority in millions of dollars)

Agency	1992 Funding
National Oceanic and Atmospheric Administration	5.0
Environmental Protection Agency	6.0
Army Corps of Engineers	7.0
Department of the Interior	5.0
Total	23.0

A 48 PERCENT FUNDING INCREASE SUPPORTS THE PRESIDENT'S GOAL OF "NO NET LOSS" OF WETLANDS

The President has articulated a national goal of no overall net loss of wetlands. Congress enacted last year significant new legislation to help stop the loss of nearly 400,000 acres of wetlands each year throughout the Nation. The budget fully implements many of the new authorities provided:

- Water rights will be acquired on a willing seller basis for the Stillwater National Wildlife Refuge (NV), which is a significant wetland that provides habitat to migratory birds in the Pacific Flyway. There have been reports that thousands of birds have died there due to lack of water or to stress associated with the lack of adequate supplies of healthy water.
- Funds are allocated for easements for 600,000 acres of wetlands to be brought into the *Environmental Conservation Acreage Reserve Program*, enacted as part of the 1990 Farm Bill. The budget proposes nearly $500 million during 1992–1995 to encourage farmers to remove higher priority wetlands from production through these easements.
- The budget fully funds the recently enacted Wetlands Protection and Restoration Program managed by the DOI and the Army Corps of Engineers for the conservation and restoration of coastal wetlands.
- The budget also funds various multi-agency programs for acquisition and management of wetlands habitat significant to migratory birds and endangered species, conservation and restoration of other high priority wetlands, and an ongoing wetlands research and development program.

POLLUTION CONTROL

EPA's operating budget is increased significantly.—The budget provides another increase for EPA's operating budget to carry out the agency's research, regulatory and enforcement responsibilities. Since the Bush Administration took office, EPA's operating program budget will have increased by 41 percent, and the workforce needed to carry out its mission will have been expanded by 20 percent. The budget provides significant increases for carrying out the Clean Air Act, protecting the Great Lakes, expanding environmental education, enforcing environmental laws, expanding research, and improving the capability of states to carry out their environmental responsibilities.

Implementing Clean Air Act changes.—The budget includes major increases for implementing the recently enacted Clean Air Act Amendments of 1990. An increase of $117 million and 341 staff years is requested for EPA to carry out the ambitious requirements and

Total EPA operating program	1,752	1,938	2,313	2,477	+164	+7
Operating program workyears	11,649	11,860	13,224	13,929	+705	+5

deadlines in the Act. Combined with the increases provided in 1991, EPA will have available a total of approximately $200 million and 600 staff years above 1990 levels to implement the amendments.

The enacted Clean Air legislation provides the authority to carry out the President's proposals to: (1) bring all cities into attainment with ambient clean air standards; (2) reduce sulfur dioxide emissions that cause acid rain by 10 million tons annually; and (3) reduce industrial emissions of toxic air pollutants by 75–90 percent. The budget provides the resources EPA needs to achieve the statute's objectives while promoting the use of market forces to achieve those objectives in the most cost-effective manner possible.

Protecting the Great Lakes.—The budget also provides funds for an innovative EPA program to protect the Great Lakes by addressing pollution from all environmental media (i.e., air, water and land) rather than the traditional focus on water pollutants. The budget includes an increase of $20 million for the initiative. It will also accelerate meeting United States commitments under the Great Lakes Water Quality Agreement with Canada.

Environmental Education.—In November 1990 the President signed the Environmental Education Act of 1990, which authorized a variety of programs to expand environmental education. The budget proposes to double EPA's environmental education funding in order to carry out this law. In addition, the budget requests $500,000 to fund the Environmental Education Program authorized in the Act, which will reward the Nation's best and most innovative teachers in this area.

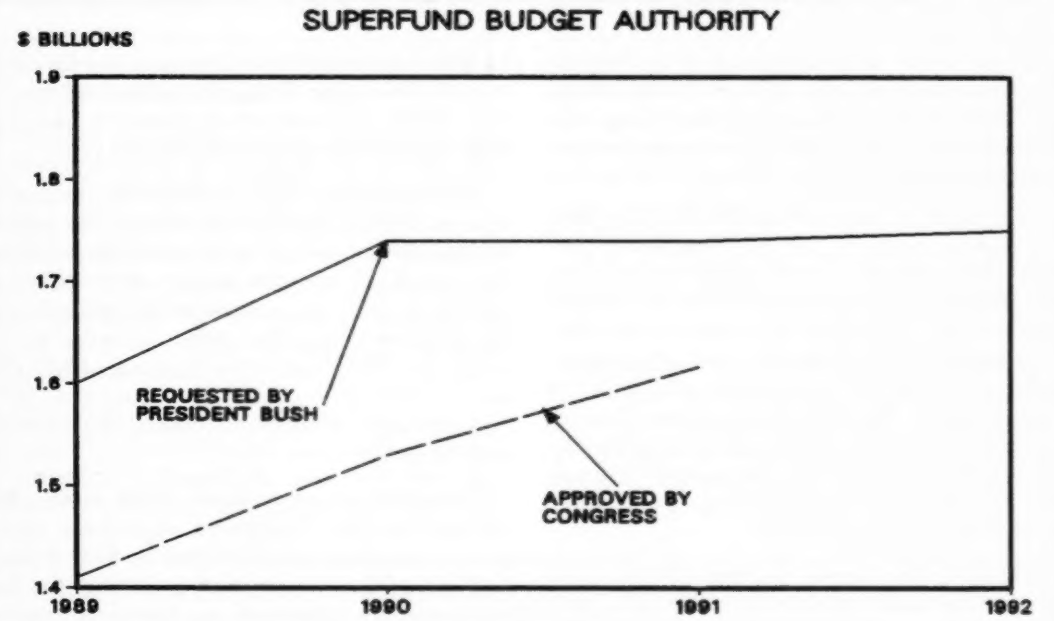
Enforcement.—EPA established new records in 1990 in its efforts to ensure that polluters pay for the cost of addressing the pollution they cause. In total the agency recovered $105 million in 1990, an increase of $40 million over the previous year. The budget includes an increase for EPA's operating program of $21 million to over $200 million to ensure that EPA has the tools it needs to enforce the Nation's environmental laws.

Cleaning up hazardous waste sites.—Resources for the Superfund hazardous waste cleanup program are increased by $134 million to $1.75 billion. The budget maintains the Administration's emphasis on requiring responsible parties to conduct cleanup activities, but places a new priority on accelerating cleanup by the Federal fund. In the past, too many Superfund receipts have been spent on support and research and development activities while actual cleanup has lagged. Consequently, resources have been shifted from support activities to actual site cleanup work, so that the entire increase is devoted to site cleanup. Cleanup activities increase by $143 million, 19 percent over 1991. The bulk of this increase ($107 million) will be devoted to permanent remedies at sites. Under the Administration's proposals, the share of cleanup funding as a percent of total Superfund budget authority

Table E–7. FOCUSING SUPERFUND ON CLEANUP

(Budget authority; dollar amounts in millions)

Activity	Actual		1991 Enacted	1992 Proposed	1991–92	
	1989	1990			Dollar Change	Percent Change
Cleanup	532	651	753	896	+143	+19
Enforcement	176	187	209	225	+16	+8
Support	702	692	654	629	−25	−4
Total, Superfund	1,410	1,530	1,616	1,750	+134	+8



SUPERFUND BUDGET AUTHORITY

will increase from 47 to 51 percent, while enforcement will maintain a 13 percent share of total funding, and support will decrease from 40 percent to 36 percent.

The Administration has pursued an aggressive program of cleaning up Superfund sites, and has requested substantial increases in Superfund funding. Unfortunately, as shown in the chart on Superfund, Congress has repeatedly reduced the President's requested level of funding for this important program.

REVITALIZING THE COUNCIL ON ENVIRONMENTAL QUALITY

The Council on Environmental Quality has an important mission: to ensure that Federal policies are consistent with the environmental quality improvement goals of the National Environmental Policy Act (NEPA), to provide coordination among agencies on key issues, and to report to the Nation on the state of the environment and related indicators.

Table E–8. **THE BUDGET FOR THE COUNCIL ON ENVIRONMENTAL QUALITY INCREASES BY 64 PERCENT**

(Budget authority; dollar amounts in millions)

	Actual		1991 Enacted	1992 Proposed	Percent Change, 1991–92
	1989	1990			
Council on Environmental Quality	0.85	1.46	1.87	3.06[1]	+64

[1] Includes $500 thousand to come from EPA for the President's Awards Program for Environmental Education.

The President has demonstrated his commitment to strengthening the CEQ and to ensuring that it has the capability to serve as an effective source of environmental analysis and information in the White House. In 1991, the President proposed a budget increase for CEQ of 90 percent. The 1992 budget continues to demonstrate this commitment. The request for CEQ represents an increase of nearly 64 percent over 1991 levels. This includes $500,000 in the Environmental Protection Agency to be allocated to CEQ to administer Presidential awards for Excellence in Environmental Education, an initiative requested in the President's 1991 budget and authorized in the National Environmental Education Act of 1990.

CLEANING UP FEDERAL FACILITIES

Department of Energy (DOE)

The budget provides a 30 percent increase over 1991 appropriated levels in the funds to continue an aggressive program to clean up nuclear facility waste sites. Since the Bush Administration took office, funding for cleanup has more than doubled, from an appropriated level of $1.8 billion in 1989, to $2.4 billion in 1990, to $3.3 billion in 1991, to the Administration's proposal of $4.4 billion for 1992. In addition, as part of this accelerated cleanup program, the Administration is proposing a $340 million supplemental appropriation for 1991, bringing the total funding level for 1991 to $3.7 billion.

In addition to providing large funding increases, the Administration is implementing a comprehensive 7-point plan for improving the cleanup program. This strategy includes: (1) risk-based budgeting; (2) program evaluation; (3) independent cost review; (4) employee incentives to achieve cleanup requirements expeditiously and cost effectively; (5) incorporating R&D into cleanup activities more quickly than presently occurs; (6) integrating the Department's Five Year Plan for Environmental Restoration and Waste Management and the President's budget; and (7) supporting legislation to establish a consistent national priority system for cleanup projects and to address the reasons for inflated costs for environmental restoration and waste management.

The combination of the significantly increased funding levels and the improved financial and management controls will enable the Department to make substantial progress in all areas where it has compliance agreements, and still have funds to manage the newly generated waste at the DOE sites.

The Department of Energy cleanup program encompasses four major categories of program activities: corrective activities, environmental restoration, waste management operations, and technology research and development.

Corrective activities include those actions required to bring currently operating and standby facilities into compliance with applicable local, State and Federal requirements and internal DOE requirements with respect to air, water, and solid waste. They cover the full range of potential releases to the environment from DOE facility operations. Corrective activities represent the smallest component of the costs, totaling $144 million in 1992. Most of the corrective activity requirements are in the near term, reflecting the need for prompt action to bring operational facilities into compliance with existing standards.

Environmental restoration activities include assessment and cleanup of surplus facilities and inactive sites to meet the requirements of applicable environmental laws, regulations, and standards. Environmental restoration consists of: (1) remedial actions to halt or prevent potential releases from inactive waste sites and (2) decontamination and decommissioning of older facilities no longer in operation.

Proposed funding in 1992 for environmental restoration is $1.47 billion, a 41 percent increase over appropriated 1991 levels. This reflects the growth in scope of the program, as the number of sites and extent of contamination become better understood, as well as a gradual transition from the investigation and feasibility studies required under CERCLA and RCRA to actual remediation projects.

Waste management operations refer to the ongoing activities throughout DOE that are directed toward the management of radioactive, hazardous, mixed and sanitary wastes consistent with laws and regulations established to protect public health and safety and the environment. The legal and regulatory requirements of waste management activities derive from the type of waste being managed, with EPA, DOE, the Nuclear Regulatory Commission, and, in some cases, States having a role in determining standards and practices.

Funding for waste management activities comprises the largest portion of the proposed environmental restoration and waste management budget, totaling $2.38 billion in 1992, a 34 percent increase over appropriated 1991 levels. This reflects the cost of constructing and operating waste management facilities in compliance with applicable laws and regulations.

Technology development activities are conducted to resolve major technical issues related to effective waste management and clean-up, and to advance beyond current technologies needed to attain and maintain compliance with environmental restoration and waste management laws and regulations. The main focus of the program is on faster, better and less costly techniques for waste cleanup and waste-stream processing. The program is designed to accelerate the conception, creation, development, and deployment of the next generation of environmental cleanup and waste management technologies. Major initiatives will focus on waste minimization, development of improved environmental characterization and restoration technologies, application of robotics and automated systems technologies, and adaptation of existing technologies to DOE problems. To accomplish the goals for improved waste management and waste site cleanup, the budget proposes to increase the investment in technology development to $309 million, a 50 percent increase over appropriated 1991 levels.

An additional $44 million for transportation management and program direction brings the total Administration proposal for 1992 cleanup activities at DOE sites to $4.4 billion.

Department of Defense (DOD)

The Defense Department is making major progress in environmental cleanup and compliance. The leadership, policy, and structure are in place today to identify and take care of problems. The budget provides $2.6 billion, an increase of almost $700 million or 34 percent above 1991, for cleanup and compliance with environmental laws. The Department of Defense will clean up all of its contaminated sites and bring all of its operations into full compliance with Federal, State and local environmental laws.

The Department is spending $1.1 billion in 1991 and proposes spending of $1.3 billion in 1992 to clean up contaminated sites. The problems have been completely identified at all 895 of the Defense Department's sites listed on the EPA's National Priority List. Actual cleanup work has begun at 68 of those 95 sites.

In addition to cleanup costs, the Department plans to spend $860 million in 1991, and $1.3 billion in 1992 to get into compliance with Federal, State and local environmental laws. Environmental program initiatives begun in 1990 are reducing DOD's hazardous waste generation by thousands of tons a year as part of the plan to cut hazardous waste generation in half by 1992. Looking further into the future, procurement guidelines established now will reduce the amount of hazardous materials used over the next decade and minimize, into the next century, the environmental effects of new systems.

These actions are coupled with thousands of initiatives at local installations, ranging from base-wide recycling programs to massive reductions in energy use. Taken together, all of these steps will help ensure substantial environmental compliance at all Federal facilities.

Department of the Interior (DOI)

The budget proposes $80 million, a 36 percent increase above 1991, for environmental compliance and hazardous waste management activities, and assessment and investigation of potentially contaminated DOI sites. This will allow the Department to continue its site inventory, conduct assessments and investigations, and keep identified remedial actions on schedule. Assessments and investigations of potentially contaminated sites will increase 68 percent from 220 in 1991 to 335 in 1992. The budget also fully funds remedial actions in 1992. DOI hazardous waste sites include unauthorized landfills on public lands, potential discharge from old mining operations on patented or public land, polluted irrigation drainage that in some cases is from Bureau of Reclamation water projects, and leaking underground storage tanks on lands managed by various DOI agencies.

Department of Agriculture (USDA)

The budget proposes $35 million, an increase of 17 percent above 1991, for hazardous waste management activities in USDA. USDA operates a centrally managed Hazardous Waste Management program, which is responsible for coordinating and monitoring all hazardous waste compliance actions. The Forest Service and the Agricultural Research Service (ARS) account for over 90 percent of all hazardous waste compliance activities within USDA. Problems consist mainly of leaking underground storage tanks, potential discharge of toxic wastes from abandoned mines, and potential contamination from past discharge of chemicals from research facilities.

Department of Commerce (DOC)

The budget requests an increase of $2 million to establish a program of environmental cleanup and compliance at National Oceanic and Atmospheric Administration (NOAA) facilities. NOAA will create a system to identify and monitor the cleanup of environmental problems at its 228 locations nationwide. NOAA will immediately begin replacing leaking underground storage tanks on its properties.

Department of Transportation (DOT)

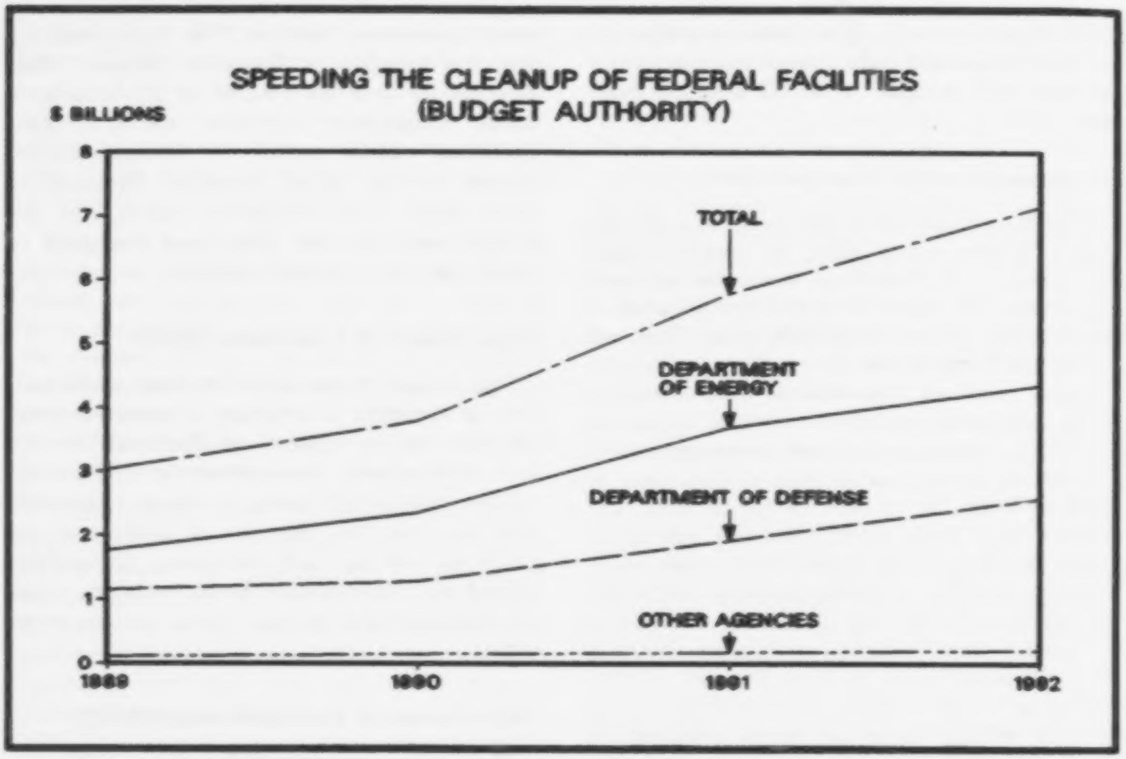
The budget provides $57 million, a 19 percent increase above 1991, for hazardous waste cleanup and compliance activities in DOT. The Federal Aviation Administration (FAA) and the Coast Guard account for nearly all of DOT'S cleanup and compliance needs. Much of the work involves replacement of underground fuel storage tanks.

Table E–9. THE BUDGET INCLUDES AN ADDED $1.7 BILLION TO SPEED THE CLEANUP OF FEDERAL FACILITIES

(Budget authority; dollar amounts in millions)

Funding Summary	Actual		1991 Enacted	1992 Proposed	Percent Change, 1991–92
	1989	1990			
Department of Energy	1,762	2,358	[1]3,690	4,356	+18
Department of Defense	1,155	1,282	1,923	2,582	+34
Department of Agriculture	8	24	30	35	+17
Department of the Interior	42	44	59	80	+36
Department of Transportation	29	29	48	57	+19
NASA and the Department of Justice	28	50	35	39	+11
Total	3,024	3,787	5,785	7,149	+24

[1] Includes a $340 million supplemental for 1991 for environmental restoration and waste management.



National Aeronautics and Space Administration (NASA)

The budget requests $36 million, an increase of 13 percent above 1991, for cleanup and compliance activities in NASA. NASA cleanup projects include soil and groundwater remediation, upgrade of various facilities, leaking underground storage tanks, and addressing facility deficiencies and corrective action requirements.

Department of Justice (DOJ)

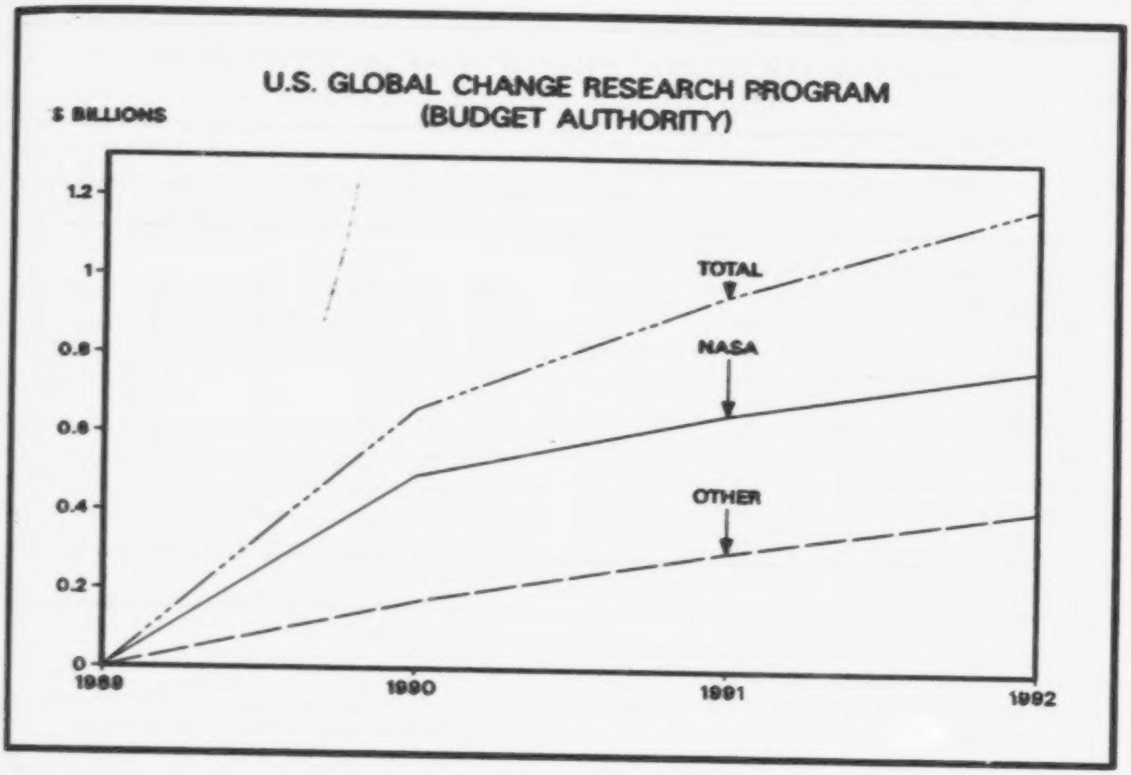
The budget requests $3 million for environmental cleanup and compliance activities at DOJ facilities. The Bureau of Prisons accounts for most of the Department's activities, with resources devoted to RCRA and Superfund cleanups, and compliance with the Clean Air Act and Clean Water Act. In addition, in 1992 the Immigration and Naturalization Service will undertake projects to replace existing underground storage tanks before leakage occurs.

Environmental Protection Agency (EPA)

The budget includes an additional 135 staff years, a 117 percent increase over 1991, for EPA oversight of cleanups at Federal facilities. This increase will ensure that EPA has an effective program of technical assistance and oversight for all 116 Federal facilities on Superfund's National Priority List for cleanup.

GLOBAL CLIMATE CHANGE

Funding for Global Change Research is expanded by 24 percent in its second year in an effort to extend America's leadership in this area.—The budget proposes a 24 percent increase in global climate change research activities over the 1991 enacted level of $955 million to the 1992 request level of $1.2 billion. This program is designed to reduce the significant uncertainty associated with predicting the behavior of the coupled ocean-atmosphere-land Earth system which determines climate phenomena and to form the basis for rational,



U.S. GLOBAL CHANGE RESEARCH PROGRAM (BUDGET AUTHORITY)

comprehensive and cost effective responses to climate change.

While the U.S. is making this substantial investment in scientific and economic research on climate change, it is, at the same time, taking several policy steps that will, in addition to other benefits, have the effect of curbing greenhouse gas emissions.

With these actions, it is estimated that U.S. greenhouse gas net emissions in the year 2000 will be no higher than in 1987.

The recently enacted Clean Air Act provisions will reduce U.S. greenhouse gas emissions. The Act's provisions for electric utilities are an unprecedented reform of that industry and the regulation of its emissions. The Act puts a permanent cap on utility sulphur dioxide emissions at 10 million tons below the 1980 levels and reduces nitrogen oxides (NOx) by 2 million tons below projected year 2000 levels. It also gives utilities the flexibility needed to obtain emissions reductions under the emissions cap by any means they choose. Utilities can choose to achieve emission reductions through conservation measures. It is thus projected that greenhouse gases from this sector will be reduced as a result of the Act.

Other provisions of the Act regulating emissions of volatile organic compounds, nitrogen oxides, and carbon monoxide will not only produce cleaner air but will also significantly affect greenhouse gases or their precursors. These reductions will reduce greenhouse gas emissions both directly in terms of NOx and indirectly by reducing ozone precursors and encouraging energy efficiency.

Phasing out CFCs, carbon tetrachloride, methyl chloroform, and hydrochlorofluorocarbons (HCFCs) in accordance with the Montreal Protocol, and even faster under the provisions of the Clean Air Act, will substantially reduce emissions of greenhouse gases as well as protect the stratospheric ozone layer. The CFC user fee enacted in the 1989 Reconciliation Act has already reduced CFC production 23 percent below the level permitted in the Montreal Protocol during the 12-month period ending in June 1990. It is expected to have some additional effects in phasing down

[1] Program began in 1990.

ozone depleting compounds faster than required by either the Protocol or the Clean Air Act provisions.

The President's proposed program for planting a billion trees a year will produce substantial benefits for wildlife, soil conservation, and energy saving, as well as directly take up CO2 from the atmosphere. The increase in the Federal gasoline tax enacted in the Omnibus Budget Reconciliation Act of 1990 will reduce emissions by encouraging energy efficiency in road transportation. Increased funding requested in the budget for research and development in solar and renewable energy and energy conservation will be important in identifying and developing technologies and practices which will allow energy needs to be met in environmentally efficient ways. New energy saving appliance standards promulgated by the Department of Energy will increase energy conservation and reduce demand.

The actions planned under current United States policy will have a substantial effect on U.S. greenhouse gas emissions. The U.S. share of world-wide greenhouse gas emissions is declining as the world's economy grows. For this reason, efforts to address the climate change issue must involve all nations.

Beginning in February 1991, the United States and other countries will begin negotiations on a framework convention on climate change. Although the climate change issue is very complex and difficult, it is hoped that a convention can be ready for signature by the 1992 United Nations Conference on the Environment and Development. Such a convention is needed to establish the framework for long-term and world-wide international cooperation and joint effort in addressing climate change concerns. The U.S. has been playing a major role in the preparations for these negotiations through the Intergovernmental Panel on Climate Change.

Global change economic research is substantially expanded.—To reduce large uncertainties about the economic implications of climate change, the budget requests $17 million in 1992 for economic research on global change, an increase of 115 percent. This research will be used to improve the economic knowledge base about global change, particularly about climate change. It will begin to reduce the very substantial uncertainties about the economic sources of climate change, the effects of climate change on human economic activities, and the economic and other implications of actions which might be taken to address climate change. The economic research funding will include $9 million for research by university and other non-governmental economists and $8 million for economic research by Federal agencies.

In addition to these funds, the budget also requests $2 million in new NSF funding to establish International Institutes which will provide regional centers to carry on and coordinate international scientific and economic research on global change.

WATER RESOURCE AGENCIES WILL FOCUS ON ENVIRONMENTAL PROTECTION, RESTORATION AND MITIGATION

Army Corps of Engineers—Protecting and Restoring Environmental Resources.—The budget of $211 million for wetlands research, protection and enhancement activities, described earlier in this chapter, includes $86 million to carry out a strengthened regulatory program that will improve protection of wetlands. The budget includes $7 million for participation with other agencies and coastal States in the Coastal America Partnership initiative. The budget includes $7.5 million to increase three-fold the "Section 1135" program, which was extended at the President's request by the Water Resources Development Act of 1990. This section provides general authority to modify existing Corps projects in the interest of the environment. The budget would initiate nine fish and wildlife restoration studies, two of which would focus on wetlands. The amount for wetlands activities also includes $1 million to initiate the recently authorized study to develop a Wetlands Action Plan and Demonstration Program. This study would include assessment of methods and procedures for establishing wetlands banking and trading, and for evaluating and crediting contributions associated with Federal projects or permits. An anticipated outcome of this study would be a proposal for two wetland mitigation banking demonstration sites.

Mitigating Environmental Impacts of Projects.—The Corps of Engineers budget includes $110 million to continue mitigating the adverse environmental impacts of specific water resources projects. Nearly one-fourth of this amount would be used to address previous wetland losses, and is included in total funding for wetlands activities. Examples of mitigation projects include land purchases in the area of the Tennessee-Tombigbee Waterway ($10 million) and construction of Columbia River juvenile fish bypass facilities at 6 existing locks and dams ($31.7 million). These fish bypass projects, with a total cost of almost $250 million, will provide facilities to assist the passage of juvenile fish around the turbines at Lower Granite, Lower Monumental, Little Goose, McNary, The Dalles, and Ice Harbor. These facilities have taken on greater importance in the light of the potential endangered species listing of several salmon species.

Bureau of Reclamation, Interior—Preserving and Restoring Environmental Resources.—The budget proposes several environmental initiatives for the Bureau of Reclamation. Nine new studies will evaluate the potential for improving fish and wildlife habitat and preserving and restoring wetlands in cooperation with local partners at selected Reclamation projects in California, Nevada, Idaho, Colorado, and Oregon. In addition, new studies will be initiated to identify the source of water quality problems at projects in Colorado, California, Texas, New Mexico, Washington, and Oregon including the Lower and Middle Rio Grande, Upper Arkansas, Dolores, and the San Joaquin River Basins.

Mitigating Environmental Impacts of Projects.—The Bureau of Reclamation budget proposal includes $89 million to mitigate adverse environmental impacts at water resources projects. Major environmental restoration activities will continue at the Central Valley Project in California, including restoration of fish and wildlife resources along the Trinity and Sacramento Rivers. Reclamation will also begin implementation of provisions of the recently enacted Truckee-Carson-Pyramid Lake Water Settlement legislation in cooperation with other Federal and non-Federal interests. Specific activities at Reclamation projects will include modification of project facilities and operational changes to improve anadromous fisheries, migratory waterfowl habitat, and other environmental resources. Environmental mitigation is scheduled concurrent with construction of projects included in the budget.

In addition, the budget places increased emphasis on non-structural solutions to water resource problems and improved management

Table E–11. ARMY CORPS OF ENGINEERS (CIVIL WORKS): PROTECTION AND RESTORATION OF ENVIRONMENTAL RESOURCES

(Budget authority; dollar amounts in millions)

Funding Summary	Actual		1991 Enacted	1992 Proposed	1991–92

and operation of existing facilities. This will significantly reduce future adverse environmental impacts of water resource development projects.

PRESERVING AMERICA'S HERITAGE

The Importance of the Heritage

The understanding, preservation, passing on, and advancement of the rich historical and cultural heritage of this diverse and pluralistic society is essential if Americans are to know what it is to be "American"—and if America is to build on its traditional strengths as it continues to advance.

Support of the Heritage

The largest support of the heritage has come from private and local initiatives. Federal tax expenditures for historic preservation came to approximately $170 million in 1989, supporting private investments in this area of approximately $900 million. A National Park Service survey showed that 75 percent of the investments would not have been undertaken were it not for the tax credit. Private giving to the arts, culture and the humanities has risen from $3.2 billion in 1980 to $7.5 billion in 1989, according to the American Association of Fundraising Counsel.

Direct Federal expenditures for preserving America's cultural heritage are a relatively small part of the budget. But they should not be viewed as insignificant. They complement tax deductions for charitable contributions as a stimulus to the private support, on which America's cultural activities have thrived. The budget proposes $833 million in direct funding for activities that preserve, pass on and contribute to the American heritage. This is $65 million (9 percent) more than enacted in 1991.

Direct Federal expenditures support the activities of the National Endowments for the Arts and the Humanities, Institute of Museum Services, the Smithsonian Institution, National Gallery of Art, Historic Preservation Fund Program (Department of Interior), and the Advisory Council on Historic Preservation.

Smithsonian Institution

The budget requests $357 million for the Smithsonian Institution, $46 million more than enacted in 1991. Since its founding in 1846, the Smithsonian has in many respects become the "Nation's Museum," as well as a leader in basic research in such fields as astrophysics and tropical biology. The Smithsonian preserves and exhibits more than 137 million objects, works of art and specimens representing America's cultural, scientific and technological heritage. Its eleven museums in Washington and the Cooper-Hewitt in New York receive over 30 million visitors a year.

The budget includes $16.3 million for the National Museum of the American Indian. The funds will be used for increased operations of existing facilities in New York City and continued preparation of an exhibit and education center in the Old United States Custom House in New York. Funds are included for planning of a museum facility to be located on the Mall in Washington, D.C. and for overall planning for the Indian Museum in New York City and Washington, D.C., and for continued repatriation of Native-American remains and objects. The Indian Museum will house the Heye Foundation's collection of Indian artifacts from all parts of the Western Hemisphere. When completed in the late 1990's, the Museum of the American Indian will preserve and exhibit the many and varied contributions of the first Americans.

The request also includes $1.7 million for the Columbus Quincentennary Program which will commemorate the voyages of Christopher Columbus and the subsequent encounters among the Europeans, Africans and the indigenous peoples of the Americas.

National Gallery of Art

The budget requests $58 million for the National Gallery of Art, $8 million more than enacted in 1991. The National Gallery preserves and exhibits one of the finest collections of works of art in the world. Its educational programs reached an estimated 91 million people in 1990, providing young people and adults with access to, and understanding of, some of the great masterpieces of civilization.

The budget increase includes $4 million to start construction of the National Sculpture Garden. This facility is expected to attract many valuable items as gifts to the Nation to enhance the Gallery's sculpture collection and to provide an attractive setting to display sculpture on the Mall. The budget also provides for the cost of operations for a major exhibition, Circa 1492: Art in the Age of Exploration, to celebrate the 500th anniversary of Columbus' Voyage to America. The exhibition will present through many works of art an image of the world as it existed in the late 15th century.

National Endowment for the Humanities

The budget requests $178 million for the National Endowment for the Humanities, $8 million more than the 1991 appropriation. The Humanities Endowment provides matching grants to assist humanities instruction in schools and colleges; research and scholarships in the humanities; media and other programs that bring the humanities to the general public; and preservation of humanities research materials. Recent projects supported by the agency include the highly acclaimed 11-hour television series, The Civil War, broadcast on PBS in the fall of 1990.

Increased funding in 1992 will be used for projects to improve humanities education at elementary through graduate levels; to support humanities scholarship, public programming, and preservation activities; and to stimulate private donations to humanities projects and programs.

National Endowment for the Arts

The budget requests $174 million for the National Endowment for the Arts to support artists and institutions of quality directly and through the States, and to foster greater attention to the arts in the Nation's schools.

Historic Preservation Fund Program (Department of the Interior)

The budget requests $36 million for the Historic Preservation Fund Program of the National Park Service, $1.4 million more than enacted in 1991. The Historic Preservation Fund provides matching grants to States and the National Trust for Historic Preservation for historic preservation planning, projects and activities. The increase will provide for additional surveys and inventories of historic properties for potential inclusion on the National Register of Historic Places; advice and assistance to State and local planning and development agencies whose decisions affect historic properties; and technical assistance to private sector architects and developers seeking to meet the Secretary of Interior's standards for historic preservation construction work to qualify for tax credits.

Advisory Council on Historic Preservation

The Advisory Council on Historic Preservation (ACHP) advises the President and Congress on historic preservation matters, and formally comments on Federal, federally assisted, and federally licensed undertakings that may affect historic properties. The 1992 budget requests $2.5 million, an increase of 13 percent over the 1991 enacted level. The increase will allow ACHP to meet increasing project review caseloads and to consider long-term improvements in the Historic Preservation Program.

Institute of Museum Services

The budget requests $27 million for the Institute of Museum Services, a 4 percent increase over the 1991 enacted level. The Institute provides general support grants to all types of museums (including art, history, science and technology museums), zoos, planetariums, historic houses, and botanical gardens. It also makes grants specifically for conservation, care and management of museum collections.

V. INCREASING CHOICE AND OPPORTUNITY

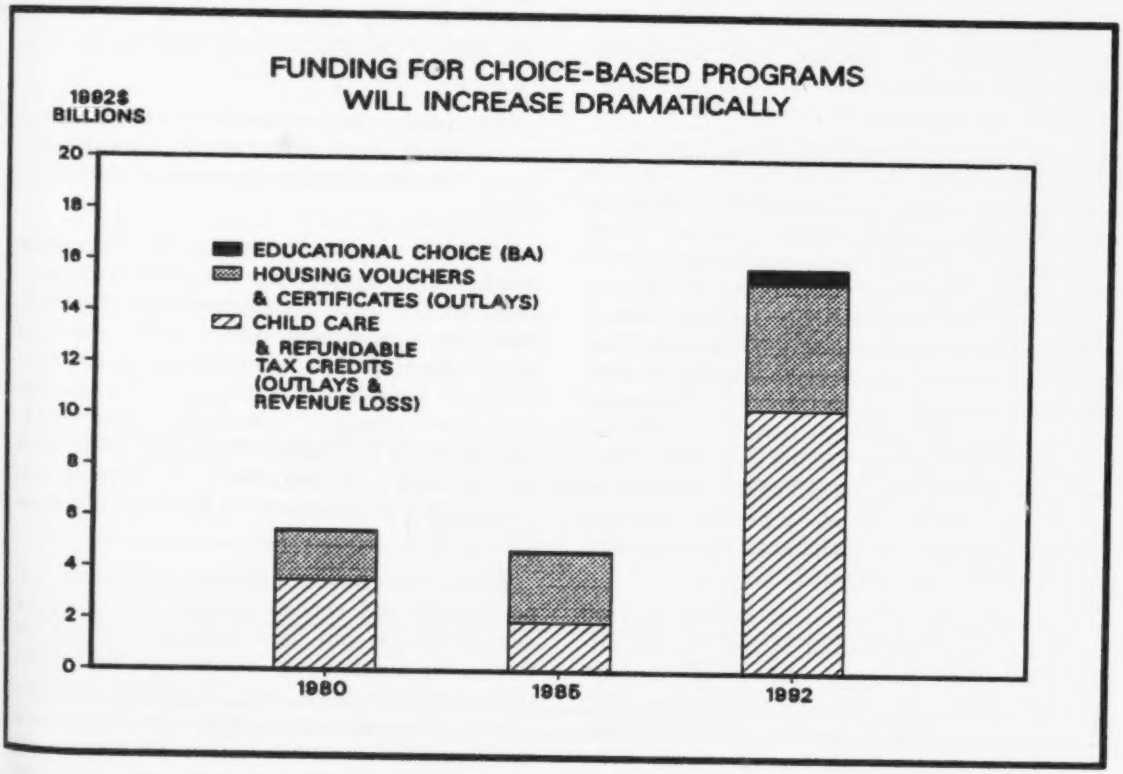
V.A. INCREASING CHOICE, EXPANDING OPPORTUNITY, AND PROVIDING HOPE TO DISTRESSED COMMUNITIES

HIGHLIGHTS

The 1992 budget focuses Federal resources on low-income people and tailors numerous programs to encourage individual choice. The goal is to empower low-income individuals by allowing them more control over their resources and a greater stake in their communities. Provisions in the budget that enhance choice and improve opportunities for low-income individuals include:

Increasing Choice and Flexibility:

- A newly expanded *Earned Income Tax Credit* and new *Health Insurance Credit* for families with children that make caring for children and health insurance more affordable, and leave the choice of care arrangements and health insurance up to the recipient families;
- The *Child Care and Development Block Grant,* the first grant program of its kind to require that assistance be offered through certificates to ensure parental choice;
- More educational choice through a new program of Federal grants to school districts that successfully implement *educational certificate programs,* new funding for *Magnet Schools of Excellence,* changes in Chapter 1 compensatory education programs to provide more parental choice, and more State and local flexibility in the use of Federal funds for education;



- Greater use of *housing vouchers* to provide low-income families with more choice in where to live and how much to spend for housing;

Expanding Opportunity:

- Full funding for *HOPE* (Homeownership and Opportunity for People Everywhere) to offer low-income families the opportunity to become homeowners;
- *Enterprise zones* to revitalize distressed communities by encouraging investment and entrepreneurial activity to create productive private-sector jobs for low-income residents;
- A modest liberalization of the *Social Security earnings test* in order to increase the range of employment choices available to elderly beneficiaries and promote longer productive participation in the work force; and
- *Improved employment opportunities* through concentrating resources of JTPA (Job Training Partnership Act) and the Employment Service more on the most disadvantaged job-seekers, and permitting greater employment on Federal projects of workers without journeyman skills.

The Importance of Economic Growth

The most effective Government policies to expand choice, opportunity, and hope are those that promote broad-based economic growth. Those Americans near the bottom of the income distribution saw their largest income gains and sharpest declines in poverty not during years when Federal spending for benefit programs was high, but in the 1950s and early 1960s. From 1950 through 1970, real GNP increased at an average annual rate of 3.5 percent, and productivity of American workers at an average annual rate of 2.3 percent. Average weekly earnings, in constant 1989 dollars, grew from $273 in 1950 to $383 in 1970.

This economic growth was especially good for those near the bottom of the income distribution. The average income of families whose income put them in the bottom fifth of all families grew 81 percent in constant dollars. Their share of all family income grew from 4.5 percent to 5.5 percent. Poverty dropped from 22.4 percent in 1959, the first year covered by poverty statistics, to 12.6 percent in 1970.

From 1970 to 1980, Federal spending on programs making payments to individuals increased 113 percent in constant dollars. However, GNP increases slowed to 2.8 percent per year, and productivity growth in the nonfarm business sector fell back to 1.1 percent per year. The average income of families in the bottom fifth of the income distribution actually declined 4 percent in real terms, from $9,655 to $9,274. After reaching its lowest point in 1973, the poverty rate saw its greatest annual increase in 1980 when it rose from 11.7 to 13.0 percent.

In the 1980s, median family income rose to record heights, and the income of the lowest fifth of families increased every year since 1982. Poverty declined from a high of 15.2 percent in 1983 to 12.8 percent in 1989, the latest year for which data are available.

Unfortunately, it is characteristic of the changing face of poverty in America that those who do not finish their high school educations and do not work regularly often do not benefit fully from a growing economy and the increasing need for skilled workers.

Fortunately, those below the poverty line are not all stuck there permanently. Upward economic mobility remains common in American society.

Economic opportunity and the determination to take advantage of it are not benefits or services that Government programs can dispense. However, Government has a central role to play in development of policies that encourage economic growth and a responsibility to promote equal access to opportunity. Government also can help individuals, especially those with few resources of their own, to develop the human capital necessary to benefit fully from opportunity.

When Government promotes additional opportunities and choices, rather than creating dependency, it can help empower individuals to join the mainstream of American life. When Government policies and programs promote choice, personal responsibility, and hope, they are laying the same foundations for low-income families on which the strength and prosperity of the American family have always rested.

INCREASING CHOICE AND FLEXIBILITY

Enhancing Parents' Choices in Caring for Their Children

Parental choice is the essential element underlying child care legislation enacted as part of the budget agreement late in 1990. This important legislation contains two key elements:

- refundable tax credits ($26 billion from 1992–96, including a $2.4 billion increase in 1992 alone), which afford parents the maximum freedom of choice possible in a Government program; and
- $732 million for the first Federal grant program that requires parents be given the option of receiving a certificate (voucher), which can be used to select the child care arrangement of their choice, including care by family, friends, neighbors and religious institutions.

Three major new and expanded provisions of the Earned Income Tax Credit (EITC) will provide low-income families with children in which at least one parent works with refundable credits equaling up to 36 percent of their earned income. Targeted to families with 1992 adjusted gross incomes less than about $22,000 (roughly twice the poverty level for a family of three), these new provisions:

Increase the basic EITC and adjust it for family size.—The 14 percent credit that previously was provided is expanded and adjusted for family size ($21 billion from 1992–96). Over time, the maximum credit available to families will grow as shown in Table A–1.

Provide a new supplemental child or "wee tot" credit.—A new 5 percent credit ($1 billion from 1992–96) is added to the EITC for families that have children younger than one year old but do not claim the Dependent Care Tax Credit for that child. This new credit (up to an estimated $378 in 1992) is designed to enhance families' options to have one parent stay at home to care for a child during its first, critical months of life.

Add another new credit for health insurance.—An additional 6 percent credit ($4 billion from 1992–96) is added to help families defray the cost of health insurance policies that cover their children. In 1992, the maximum credit will be about $453.

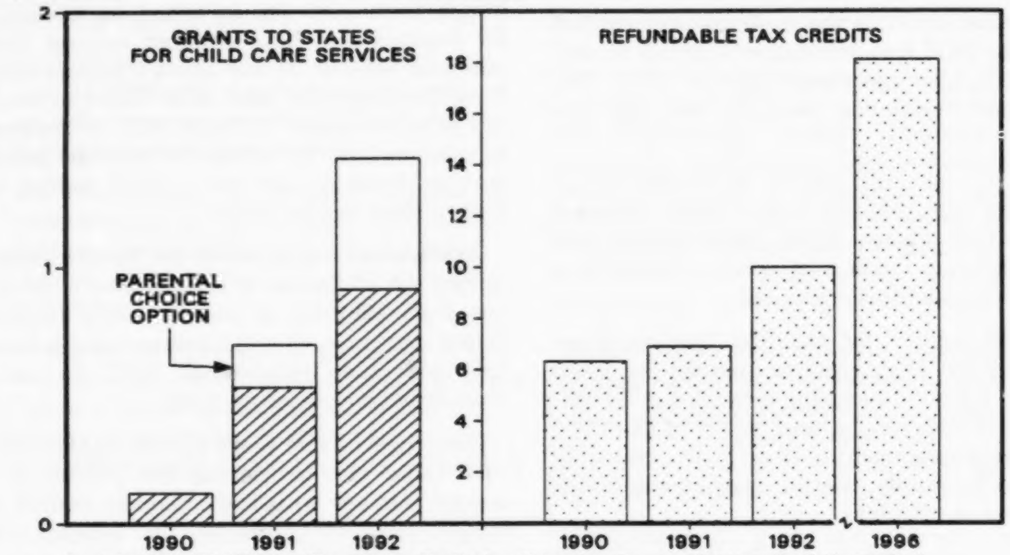
Over the first five years of their implementation, these new provisions will provide low-income families with $26 billion in additional income. Because some of the benefits are phased in, the five-year cost does not convey the magnitude of the new provisions. Had they been fully implemented in 1991, their five-year cost would be about $38 billion—a very large supplement to the earnings of low-income working families.

Refundable tax credits reduce families' Federal income tax liability or, more commonly, result in a payment to them because they have little, if any, income tax liability. In either case, parents will have more income to use as they see fit to care for their children. As the refundable tax credit bars in the figure displaying child care resources illustrate, the amount of these resources is projected to grow significantly.

Table A–1. MAXIMUM BASIC EITC BENEFIT

(Calendar years; 1992 dollars)

	Old Law	New Law	
	1992	1992	1996
One Child	1,057	1,329 (+26%)	1,752 (+66%)
Two or more	1,057	1,389 (+31%)	1,904 (+80%)



PARENTS WILL HAVE A WIDER RANGE OF CHOICES IN CARING FOR THEIR CHILDREN

Grants include JOBS, AFDC transition child care (funding for which varies with economic assumptions), the new IV–A child care grant for families at risk of going on welfare, and CCDBG.

Credits include the basic EITC, which effective 1/91 is expanded and adjusted for family size, the young child supplemental credit, and the health insurance credit.

Parental choice in caring for their children also will grow under Federal grants specifically designed to provide child care services, as the bars showing grants to States in the child care resources figure illustrate. The new Child Care and Development Block Grant (CCDBG) is a landmark addition to this category of grants.

CCDBG is the first child care grant program to vest decisionmaking power in parents, rather than Government. Parents *must* be given the option of receiving a certificate—which allows them to select the care-giver of their choice—for services funded by 75 percent of the grant funds ($549 million). A separate allocation of 25 percent of the grant ($183 million) to fund child development, before- and after-school care, and activities to improve quality, *may* also be used to provide certificates for care.

Funding for CCDBG first becomes available in September, 1991. As a result, the major portion of the $732 million appropriated for the program in 1991 will be spent in 1992. The budget proposes an additional $732 million for 1992.

Other Federal grants specifically support child care services—the child care component of the JOBS program, transitional child care services for AFDC recipients who leave the welfare rolls to work, and the recently enacted grant program that provides child care services to low-income working families at risk of going on AFDC. These grant programs allow States to use vouchers in providing child care services if they so chose. The regulations for the CCDBG will be drafted so that the certificate program can serve as a model for providing vouchers under the other programs. The certificate program also will be evaluated on a continuing basis to determine how this approach to providing choice might be expanded to other programs.

Increasing Choice in Education

One of the most important choices a parent makes for his or her child is the school the child will attend. Increasingly, school systems are offering parents the opportunity to choose the school they believe will serve the needs of their children best. The result can be more responsive and creative schools providing better educations.

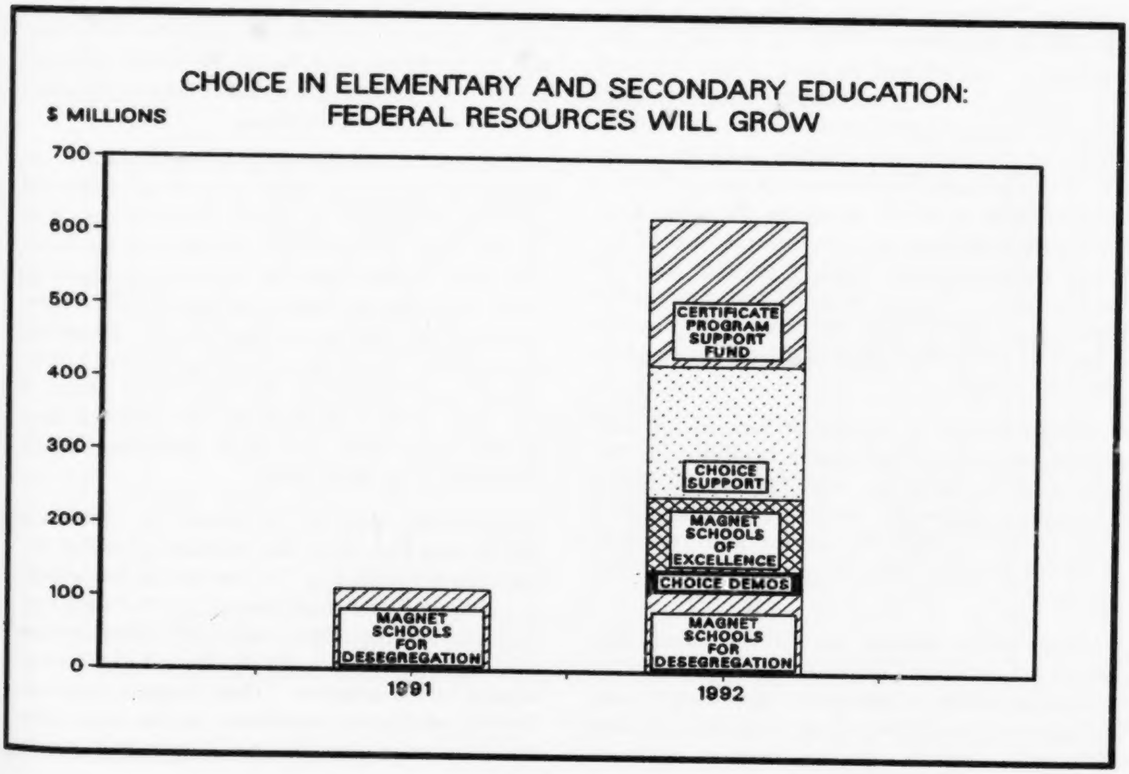
The budget continues the Administration's strong support for educational choice. The budget contains several major initiatives: a Certificate Program Support Fund; resources for support of choice programs and demonstrations of new choice techniques; support for magnet schools; clarification of the ways in which the major program for disadvantaged students, Chapter 1, can be used in school districts with choice programs; and support for the choice clearinghouse and technical assistance center.

Providing incentives for school districts to establish certificate programs.—New authority will be proposed for $200 million per year for a Certificate Program Support Fund to provide incentives to school districts to establish certificate programs that enable parental choice of schools. The new Federal funds are not for certificates; they are support payments to Local Educational Agencies that have certificate programs.

Funds would be available only to school districts that have in operation or will be initiating a qualified certificate program in the program year for which funds are appropriated. Funds would be used to enhance educational services.

Promoting innovative choice demonstrations.—Some States and districts may want to implement choice programs, but need the example of successful models to help them decide what form their programs should take. New authority and $30 million will be sought to finance nationally significant choice demonstrations with rigorous evaluations.

Increasing use of Education Block Grant (Chapter 2) funds for choice.—The Block Grants ($449 million) are the largest source of flexible Federal funding for educational reform that the States now receive. Aiding local districts will remain a focus of the Block Grants. Amendments will be proposed to expand the amount reserved to States from 20



percent to 50 percent so that States would have up to $225 million to support choice programs.

Funding Magnet Schools of Excellence.—New authority and $100 million will be sought to promote further opportunities for parental choice by permitting establishment of magnet schools in any school district, regardless of racial composition or the presence of a school desegregation plan. Magnet schools programs provide a form of competitive or open enrollment within districts or across districts. Generally, parents can select schools that, for example, specialize in a particular subject area, such as science or the arts, or offer advanced courses or special remedial courses. Magnet schools are a proven successful technique for providing parents with a choice of public schools.

Supporting magnet schools program.—The funding ($110 million) and operations of the current magnet schools program related to desegregation plans will be continued under current law at the 1991 level of funding.

Facilitating the use of Local Educational Agency Grants (Chapter 1) funds in choice programs.—Over $6 billion in compensatory educational funding under Chapter 1 is allocated among 90 percent of the Nation's school districts every year. Language will be proposed to clarify the relation between Chapter 1 funds and local choice plans. Where a locality has a choice program in effect that covers schools and children selected for Chapter 1 services, and a child's parents exercise an option to change schools, the funds that would have been spent for their child through Chapter 1 services would follow the child to the new school.

Maintaining a choice information and assistance clearinghouse.—In 1990, the Department of Education established a technical assistance center for choice plans, and a toll-free phone number for advice and referrals. These activities will be continued and improved.

Increasing choice for low-income students pursuing higher education.—The budget proposes to provide a significantly larger share of available higher education student assistance grants to low-income students. Higher education aid, both Pell Grants, $5.8 billion for 1992, and Guaranteed Student Loans, $5.9 billion, are flexible and portable, and provide educational choice. In effect, Federal aid for higher education long has been funding a successful voucher system. This initiative, described more fully in Chapter V.C., is designed to help more lower income students take advantage of post-secondary education and to provide these students with greater financial resources to expand the range of their educational choices.

Expanding Choice in Housing Programs

Housing vouchers provide low-income residents more housing choice than new construction programs. When housing funds subsidize a building, families can benefit from those funds only by residing in that building, no matter how deteriorated the building or its neighborhood becomes. If they wish to move, tenants lose the subsidy. By comparison, vouchers permit assisted families to exercise the same kind of choice as other families in deciding where to live and when to move.

In addition to providing tenants with more choice, vouchers permit more tenants to be assisted with a given amount of funds. A voucher can be provided to a family at about one-half the cost of assisting the same family through new construction subsidies.

Until 1974, all housing subsidies were attached to buildings. Since that time, subsidies allowing a tenant a choice of dwelling, first in the form of Section 8 certificates in 1974, and then in the form of housing vouchers in 1983, have become more prevalent. Most rental subsidies still are project-based. However, since 1974, subsidies providing tenants with choice have accounted for a growing share of the total. If the Administration's policy is supported, over time, subsidies providing choice will come to predominate.

Consistent with the emphasis on individual choice, almost all of the additional rental assistance requested in the budget is for vouchers. Project-based subsidies or limited new construction is requested only for those groups with special needs, such as the elderly, handicapped or homeless. The budget requests 78,680 additional vouchers, 2,000 new construction subsidies for the elderly and handicapped, and 5,367 project-based subsidies for the handicapped, elderly and other special uses. For 1992, $2.4 billion is requested for incremental vouchers, an increase of $703 million, or 41 percent, over 1991. Total 1992 funding for vouchers and certificates, including their contract renewals, is $8.3 billion, a 27 percent increase over 1991. (Table A–2 summarizes funding for major HUD programs expanding choice and opportunity.)

One of the HOPE initiatives funded in the budget is a demonstration to test the effectiveness of combining housing vouchers and supportive services assistance to enable frail elderly individuals to choose to remain in their own units, rather than be forced to move to congregate care. The vouchers would include a subsidy to cover both housing costs and 40 percent of needed services; the other services costs would be paid by State, local, or private sources.

For many frail elderly individuals who are faced with increasing infirmity or recovering from an illness or injury, the only current choice may be to enter a nursing home in order to receive supportive services. Such services are very costly in a nursing home, and may be more intensive than needed. This demonstration will allow frail elderly more choice in determining where they want to live and the amount of support services they need. As long as their present units met certain housing quality standards, the elderly tenants could remain in those familiar surroundings and still qualify for supportive services.

Increasing Local Flexibility: Moving Decisionmaking Closer To The People It Affects

Experience shows that the Federal system tends toward a proliferation of specialized programs and a labyrinth of federally legislated and regulated requirements to fine-tune programs. No matter how well-intentioned each individual Federal requirement can claim to be, the sheer complexity of directions and restrictions on spending Federal funds has unintended adverse effects. Among the most significant is that communities may not have the flexibility to use available funds as efficiently and effectively as possible.

[1] Includes renewal funding for vouchers and certificates.

[2] Reflects proposed budget-neutral supplemental.

[3] Reflects estimated revenue loss (tax expenditures).

n/a = Not applicable.

The budget contains several proposals aimed at reducing unnecessary Federal strings on funds provided to State and local grantees. While preserving essential standards, such as nondiscrimination and financial accountability, the proposals seek to bring decisionmaking closer to the people it affects.

Increasing flexibility in use of education funds.—Legislation will be proposed to allow State and local grantees to obtain waivers of some legislative and regulatory requirements governing selected education programs administered by the Department of Education and other agencies. In order to receive waivers, grantees would propose educational goals to be achieved by students. Continuation of the waivers would depend upon progress toward the established goals.

Replacing several categorical housing programs with HOME grants.—The National Affordable Housing Act replaced several categorical housing development and rehabilitation programs with more flexible HOME grant funds. With HOME grants, States and localities can provide housing assistance to eligible residents through tenant-based rental assistance and project-based subsidies, including acquisition, construction, and moderate or substantial rehabilitation. This budget provides States and localities greater flexibility in meeting the housing needs of their low-income residents by terminating several remaining Federal new construction programs and reallocating the funding to the HOME program. The budget proposes a fully-offset 1991 supplemental of $500 million; funding is increased to $1 billion in 1992.

Simplifying programs for the homeless.—The fragmentation of current programs targeted to the homeless can impede the efforts of local providers to respond to the housing, health-related, educational, and vocational problems of the homeless. The budget proposes to consolidate funding from several small McKinney Act homeless programs operated by the Departments of Health and Human Services, Labor, and Education into a new program. This $57 million HUD initiative will provide States, localities, and nonprofit providers greater flexibility to develop comprehensive projects to address specific, hard-to-serve homeless groups. In addition, the Department of Health and Human Services proposes to use demonstration authority to provide $20 million in homeless research demonstration grants. Total proposed funding for the homeless in the budget is $1 billion.

EXPANDING OPPORTUNITY

Expanding Residents' Stake in Their Communities through Homeownership and Management

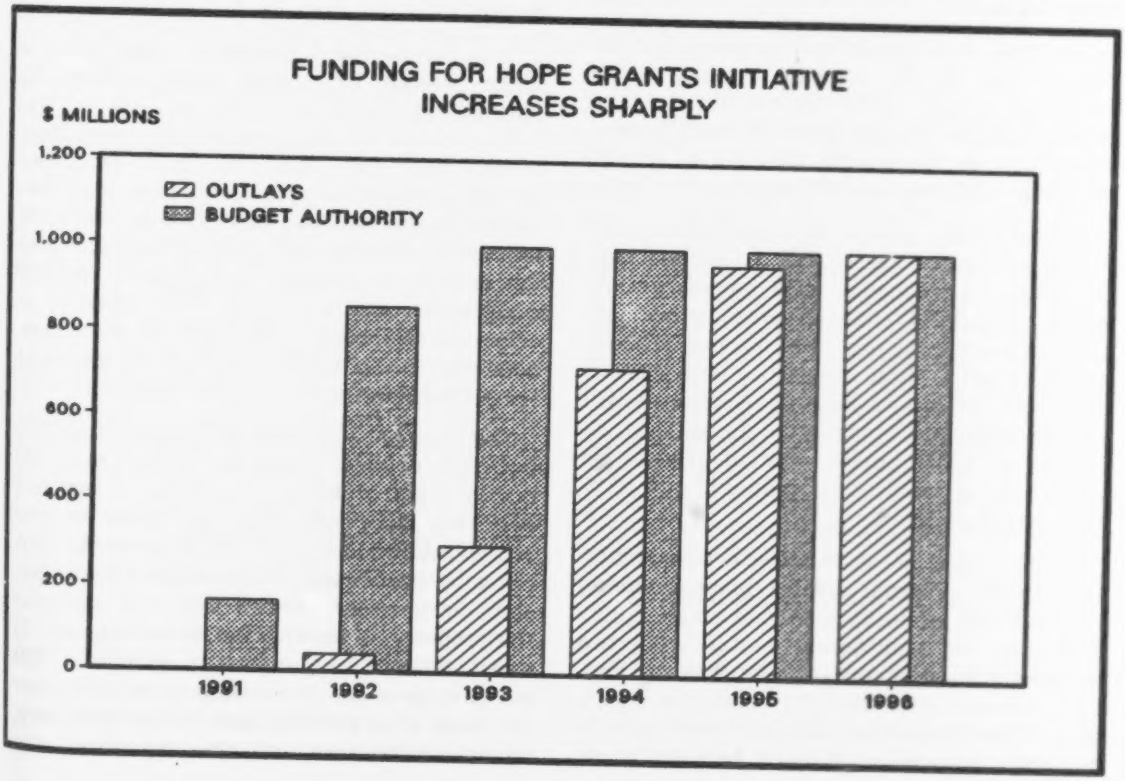
The importance of homeownership in promoting stable neighborhoods, socially responsible behavior, and civic involvement has long been recognized. In the past, policies to provide homeownership opportunities have been targeted primarily toward middle-income families, especially families seeking to buy their first home. The budget contains several proposals to enhance homeownership opportunities for first-time buyers, particularly lower income families.

Expanding HOPE grants to help low-income families become homeowners.—The Administration's Homeownership and Opportunity for People Everywhere (HOPE) initiative is a critical part of the National Affordable Housing Act, signed into law on November 28, 1990.

The goal of HOPE is to help low-income families become homeowners with a stake in their communities. Helping public housing project tenants become tenant-managers and owners can produce dramatic improvements. The creation of a tenant-management corporation and the transfer of ownership to the tenants can transform a troubled public housing project into a viable, dynamic residential community. The Kenilworth-Parkside site in Washington, D.C., is a vibrant example of such change.

HOPE will promote homeownership opportunities in three kinds of properties: (1) public housing; (2) FHA-insured multifamily properties that are financially distressed or already in HUD's portfolio because of foreclosure; and (3) properties currently held in Federal, State or local government portfolios.

The budget requests supplemental funding in 1991 for these three programs at their authorized level of $155 million. This request is fully offset. For 1992, the budget also requests



FUNDING FOR HOPE GRANTS INITIATIVE INCREASES SHARPLY

the authorized level, $855 million. (The funding request for the entire HOPE initiative is $287 million for 1991 and $2.15 billion for 1992, as shown in Table A–2.)

Public and Indian housing homeownership: This HOPE program creates a single funding source for the activities necessary to develop and implement successful homeownership opportunities in the public housing program. The budget requests a fully-offset supplemental appropriation of $68 million for 1991, and $380 million for 1992. Program funds will provide for: (1) planning and technical assistance grants to assess the viability of tenant ownership and to prepare tenants for homeownership; and (2) implementation grants for project rehabilitation, counseling, operating expenses, capital and operating reserves, and transaction costs. Section 8 certificates and vouchers also will be available for relocation or replacement housing. Funds will be awarded competitively to eligible tenant-management groups and local housing authorities. Applicants will be required to provide a 25 percent match for HOPE implementation grants; the planning and technical assistance grants require no matching funds.

Government owned or held multifamily properties: This HOPE program creates homeownership opportunities in multifamily projects previously insured by FHA that become financially or physically distressed or are owned by HUD because of foreclosure.

A total of $51 million is requested for 1991 in the proposed budget-neutral supplemental; for 1992, the request is $280 million. Grants would be made to tenant groups or other nonprofit organizations and local housing authorities to acquire these properties and convert them into low-income housing. Applicants will provide matching funds equal to at least 33 percent of HUD implementation grants. No match will be required for planning and technical assistance grants.

Single-family government-held properties: This HOPE program creates homeownership opportunities primarily in vacant single-family properties (or multifamily rental properties containing fewer than five units) held by Federal, State, or local agencies. With few exceptions, these properties were not previously in the lower income or assisted housing stock. Thus, this program produces a net increase in the lower income housing stock. Grants will be used to assist in the purchase of publicly held properties, such as those owned by HUD, the Department of Agriculture, the Department of Veterans Affairs, the Resolution Trust Corporation, and State or local Governments, including Public and Indian Housing Authorities.

A total of $36 million is requested in the supplemental for 1991 for this program; for 1992, the request is $195 million. Grantees must provide matching funds equal to at least 33 percent of HUD funds.

Preserving assisted low-income housing.—Over the next 15 years, the private owners of 360,000 units of HUD-assisted, FHA-insured, multifamily properties will become eligible to prepay their mortgage loans and convert their properties to market-rate rental housing or other purposes. The regulatory agreements signed at the time the properties were built allow owners to prepay their mortgages after 20 years. The majority of these properties were built in the early 1970s. Most of the 20-year terms will expire in the near future.

This "prepayment inventory" has posed a major problem for housing policy makers. As part of the HOPE initiative, the Administration proposed the first comprehensive strategy to deal with this issue. The basic principles of this strategy were to: (1) assure that low-income households continue to have access to affordable housing; (2) provide opportunities for tenants to become homeowners; and (3) compensate owners fairly to retain their properties as low-income rental units in those markets where affordable housing is lacking and tenant homeownership is not viable.

The National Affordable Housing Act of 1990 incorporates these principles. If owners decide not to accept financial incentives to continue operating their properties as lower income rentals, they must offer the property for purchase by the tenants, for resident homeownership, or to other entities who will maintain the property as low-income rental housing. To assist tenants to purchase properties, HUD will provide grants to resident councils to cover the costs of acquisition and for rehabilitation, technical assistance, and other expenses.

In support of the preservation strategy, the budget requests $718 million in 1992. Within this funding level, homeownership subsidies would be available to families for purchasing units in the "prepayment inventory."

Aiding distressed properties, improving housing, and offering tenants an equity interest in their rental units.—In addition to the HOPE initiatives, the budget proposes a new Low-Income Resident Empowerment Program to address distressed FHA-insured and subsidized projects that are not part of the "prepayment inventory" or that do not receive assistance through HOPE. These are properties insured by FHA that are either financially distressed, in very poor physical condition, or both.

The primary goals of this initiative are: (1) reduce the number of foreclosures and property acquisitions by FHA (which result in payments for claims by lenders); (2) improve the living conditions of tenants; and (3) give them an equity interest in these buildings.

In return for providing an equity interest to the tenants, landlords would receive financial assistance to cover cash-flow problems or to make needed physical improvements. The total amount of the assistance provided to owners would have to be less than an agreed-upon cost cap, such as the cost of protecting eligible tenants with vouchers.

For properties already owned by HUD because of foreclosures, the budget proposes 8,575 vouchers for use by tenant groups that wish to acquire such buildings. If no tenants wish to purchase the properties, the vouchers would allow income-eligible tenants to remain in these properties or move to other housing. This initiative requires removal of statutory requirements that project-based subsidies remain attached to most properties when they are sold.

Permitting use of IRAs by first-time home-buyers.—The Federal Government provides substantial support for homeownership through the tax code and Federal credit programs. However, some potential home-buyers have difficulty accumulating the savings necessary for a down payment. To expand homeownership opportunities for young families and first-time home-buyers, the Administration proposes to allow Individual Retirement Accounts (IRAs) to be used for buying a home. Although moderate-income families are eligible to receive tax-deferred treatment for savings through IRAs, they are not currently permitted to make IRA withdrawals, without penalty, for what is likely to be the biggest investment in their lives—their homes.

The Administration proposes that, beginning January 1991, first-time home-buyers could withdraw funds in their tax-deferred IRAs without penalty. The maximum amount that could be withdrawn from an IRA for a down payment would be $10,000, and the maximum house price would be 110 percent of the average area purchase price.

Revitalizing Economically Distressed Communities: Enterprise Zones

To address persistent concentrations of poverty, the budget proposes tax incentives to create jobs and stimulate entrepreneurial activity in blighted urban neighborhoods and poor rural areas. The Secretary of Housing and Urban Development would be authorized to designate 50 Federal enterprise zones, one-third of them in rural areas, and offer certain Federal tax incentives within the zones.

The revitalization of economically distressed urban and rural areas requires effective coordination and use of public and private resources. Productive private-sector jobs are critical to any meaningful empowerment initiative. By offering tax incentives and the removal of regulatory barriers, enterprise zones encourage new private-sector investments and entrepreneurial activity to create productive jobs. Federal enterprise zones are not a panacea or a replacement for other long-standing Federal anti-poverty programs. However, the Administration believes enterprise zones will make a crucial difference in creating the productive partnership of the public and private sectors needed to reverse long-term economic deterioration in selected areas.

The three major enterprise zone tax incentives are:

- *A 5 percent refundable tax credit* for the first $10,500 of wages, up to $525 per worker, to qualified employees for wages earned in an enterprise zone business.

This credit phases out between $20,000 and $25,000 of total wages. In many cases, this credit will cut the taxes of low-income workers to zero. For some low-income families who already owe little in taxes, a refundable credit will put more money in their pockets. The proposed wage tax credit is designed to encourage low-income inner-city and rural residents to obtain employment, become self-supporting, and leave welfare.

- *Expensing of investor purchases* of newly issued corporate stock for businesses located in enterprise zones. This is an upfront deduction for up to $50,000 per year of new equity investment, with a $250,0000 lifetime limit. Corporations issuing the stock must have less than $5 million of total assets, and must use the stock proceeds to acquire tangible assets located within the zones. This incentive should make zones attractive to new capital by giving an immediate tax saving to individuals who invest in enterprise zones. It is also designed to provide inner-city entrepreneurs with the seed capital they need to start small businesses.
- *A zero capital gains rate* for gains on investment in tangible property located within an enterprise zone for at least two years. To be eligible for the exemption, firms must operate in the zones for at least two years, must be engaged in the active conduct of business in the zone, and must have 50 percent of their employees working in the zone. This is another strong incentive for potential local entrepreneurs and outside investors to bring capital into the zone. It is a more delayed reward for entrepreneurship than the upfront expensing deduction.

The 50 zones would be chosen through a competitive process after a systematic evaluation by the HUD Secretary. Applicant localities must commit to provide regulatory relief and improved services within the areas they nominate as Federal enterprise zones. Those States and localities providing the strongest packages of incentives and initiatives would be selected for zone designation.

Increasing Access to Employment Opportunities

In 1990, there were about 18 million more Americans employed than in 1980. During the same period, median family income rose to historic heights. For most people, opportunity to participate in the mainstream of American life means opportunity for employment.

The budget includes several proposals for reform of current programs and services aimed at increasing the capacity of disadvantaged people to compete in the labor market.

Concentrating Job Training Partnership Act (JTPA) resources on the most disadvantaged participants.—JTPA is the principal source of funding for job training of disadvantaged workers. For 1992, $4.0 billion is budgeted for JTPA. To improve the program's effectiveness, the Administration is proposing amendments to: target job training efforts on extremely disadvantaged adults and youth through strict eligibility requirements and a revised funding allocation formula; offer a comprehensive array of education, job training, and support services; and intensify youth job training efforts by replacing the summer youth employment program with a year-round education and training program.

In an effort to reach youth in poverty-stricken inner-city neighborhoods and rural communities, a new Youth Opportunities Unlimited (YOU) program is proposed. By providing grants to up to 40 high-poverty areas, YOU would offer incentives to marshal public and private resources to establish and meet goals for improving the job opportunities for youth residing in those areas.

Increasing support for vocational education and reducing abuses by some providers.—The budget provides significant funding for vocational education through programs under the Carl D. Perkins Vocational and Applied Technology Act and vocational student support under the Higher Education Act. For 1992, $1 billion is proposed for the Perkins Act programs; $5.8 billion for Pell Grants. In addition, over $11 billion in subsidized student loans will be supported under the Higher Education Act, most of which benefit students in vocational training.

In recent years, many students enrolled in vocational training paid for with Higher Education Act funds have been victimized by schools that provide training of little value, leaving some students unable to qualify for the kinds of jobs for which they were trained and with an unmanageable burden of debt. The resulting default costs have been very high. Administration initiatives in 1990 began to attack these abuses, and are now supported by legislation enacted in the Omnibus Budget Reconciliation Act of 1990 that bars the worst schools from participation in the loan program. Additional legislative remedies are being sought in the Administration's Higher Education Act reauthorization proposals. The proposals would eliminate more schools with high default rates and programs unable to meet quality standards, prevent low-quality schools from entering the program, limit the charges these schools can finance with Federal funds, and begin to establish standards of quality for all schools. The result will be better educational opportunity and a better chance for students to benefit in the labor market.

Reforming the Employment Service.—The United States Employment Service is a joint Federal-State program created by the Wagner-Peyser Act of 1933, as amended by the Job Training Partnership Act of 1982. The Federal Government provides grants to States to carry out various labor exchange activities, matching the needs of employers and job-seekers through a network of about 1,700 local Employment Service offices. These local offices may offer job-seekers and employers a wide range of services, including job referral, testing, counseling, workshops in job search techniques, job fairs, labor market information, and specialized recruitment to meet affirmative action plans.

Since the Employment Service was established, the range of other private and public agencies offering labor exchange services has increased. In addition, over the years the Employment Service has taken on other functions not closely tied to its original purpose. The budget proposes Employment Service reforms aimed at clarifying its mission for the future and increasing its effectiveness. The proposal is reinforced by recent General Accounting Office recommendations.

As an initial reform step, the budget proposes to establish performance standards and increase monitoring of State Employment Service performance. The Department of Labor will work with the States to develop improved information about the different employment services provided by the States, the costs of providing those services, the populations served, and the nature of the jobs obtained through Employment Service referrals.

Some research suggests that the Employment Service is most effective at providing labor exchange functions to those entering the labor force, to minorities, and those with lower levels of skills and experience. By comparison, highly skilled and professional job-seekers typically secure employment through self-initiated contacts or the efforts of private agencies. Consequently, one focus of reform effort will be to concentrate Employment Service resources on the more disadvantaged job-seekers.

Increasing opportunities on Federal construction projects for workers still learning their journeyman skills.—The Department of Labor recently issued regulations, effective February 4, 1991, to permit use of helpers on all Federal construction projects. Two helpers would be permitted for every three journeymen. This action is intended to lower the cost of Federal construction contracts and increase construction job opportunities for workers with lower skill levels.

The budget proposes another reform with similar objectives. The requirements imposed by the Davis-Bacon Act regarding wage levels for Federal construction projects would be limited to contracts of over $250,000. The current threshold for application of the Davis-Bacon provisions, $2,000, has not been raised since 1935.

Providing more construction employment opportunities for those who want to develop journeyman skills would create another rung on the ladder to economic success for less-skilled workers.

Making modest reductions in the constraints on employment faced by elderly social security recipients.—If recipients of social security retirement benefits aged 65 to 69 wish to supplement their benefits with earnings, they may earn up to $9,270 this year without any reduction in their benefits. (The amount of allowable earnings increases each year with increases in average wages.) Beyond $9,270, each three dollars of earnings reduces their social security benefits by one dollar. (After age 69, earnings do not affect benefits.)

For retirees with sources of income other than earnings, such as private pensions and investment income, this limitation on allowable earnings may have little effect on their life-choices. For retirees without other private sources of income, the earnings test can constrain their choices of employment and their standard of living.

The budget proposes an increase in the amount of allowable earnings for social security retirement recipients aged 65 to 69. For 1992, allowable earnings would be increased $800, or 8 percent, from $10,200 to $11,000. For 1993, the increase would be $200, from $10,800 to $11,000. For 1994, allowable earnings would continue to rise to the level projected in current law, $11,400.

V.B. ENDING THE SCOURGE OF DRUGS AND CRIME

HIGHLIGHTS

The Administration is strongly committed to ending the scourge of drugs and combatting violent crime. The budget proposes an overall increase of $1.1 billion, an 11 percent increase over 1991, to extend the progress begun in curbing drug use in America. If enacted, total Federal drug control spending would be $11.7 billion—an increase of $5.2 billion, or 80 percent higher than when the President took office.

Ending the Scourge of Drugs

The key elements of the Federal drug control effort are:

- To fight drugs at the source and on the streets, the budget proposes an increase of $627 million (14 percent) in criminal justice activities and a $221 million increase (8 percent) in international and interdiction programs;
- To expand and target prevention efforts, the budget proposes to continue to increase the Education Department's Drug Free Schools program to 79 percent above 1989 levels and includes a $15 million increase over 1991 for the Department of Health and Human Services' (HHS) Community Partnership prevention grants;
- To improve and expand treatment programs, the budget proposes a new $99 million drug treatment grant program to expand the Nation's capacity to treat drug users; additional resources are also proposed for treatment research and for programs that target pregnant women and individuals in the criminal justice system—for a treatment total of $1.7 billion (up 10 percent).

Fighting Crime

In addition to drug control programs, overall law enforcement efforts will continue to be a priority. The level of crime is still too high. If neighborhoods are to be made safe, the laws must be enforced. Therefore, the 1992 budget proposes an increase of $2 billion for all Federal law enforcement programs, from $12.8 billion in 1991, to $14.8 billion in 1992. (These figures include some of the drug law enforcement programs discussed above.) The last section of this chapter discusses all Federal law enforcement expenditures, of which the drug control programs are one component. Key elements of the fight against crime include:

Table B–1. **FEDERAL SPENDING TO FIGHT THE WAR ON DRUGS**
(Budget authority; dollar amounts in billions)

	Actual			1992 Request	Percent change, 1991–92
	1981	1989	1991		
Prevention	0.1	0.7	1.4	1.5	+5
Treatment	0.4	0.9	1.5	1.7	+10
Research	0.1	0.2	0.4	0.5	+12

International	0.1	0.3	0.6	0.8	+20
Intelligence	—	0.1	0.1	0.1	+6
Criminal Justice	0.4	2.8	4.4	5.0	+14
Total	1.5	6.4	10.5	11.7	+11

- an increase of $328 million or 19 percent above 1991 for the Federal Bureau of Investigations to expand and improve its efforts against violent and white collar crime;
- an increase of $609 million for the U.S. Attorneys and the Judiciary, 22 percent above 1991, to assure that criminals are tried and held accountable for their offenses; and
- an increase of $467 million or 27 percent above 1991 for the Federal Bureau of Prisons, to ensure that convicted offenders are punished for their crimes.

ENDING THE SCOURGE OF DRUGS

The total drug control request for 1992 is $11.7 billion, a $1.1 billion increase over 1991.

ATTACKING THE DRUG MARKET AT THE SOURCE AND ON THE STREET

The National Drug Control Strategy is an integrated approach that attacks the problem on all fronts through drug treatment, prevention, education, and law enforcement. In enforcing the law, pressure is put on all points of the distribution chain—from the source country where the drugs are grown to the street corner where they are sold. At each point, the goal is to identify, arrest, prosecute, and punish those that break the law.

The 1992 budget proposes an increase of 12 percent over 1991, or a total of $0.8 billion for drug law enforcement activities.

Drug law enforcement affects drug use by making the substances more difficult or expensive to purchase and by deterring current or potential users with the threat of punishment. The number of individuals using illicit drugs in this country is declining. While it is not possible to identify the exact causes of that decline, one can say with certainty that some of those individuals were deterred by the intensified pressure of the law enforcement agencies. The budget will keep this pressure on by proposing increased funding for criminal justice, interdiction, and international activities.

- To fight drugs domestically, the budget proposes an increase of 20 percent for the Organized Crime and Drug Enforcement Task Forces (OCDETF). This effective drug enforcement strategy will grow from $335 million in 1991 to $402 million in 1992. The growth will be spread among the OCDETF participants and will combine their intelligence, equipment and investigative techniques to produce an estimated 28 percent more indictments and 29 percent more convictions than in 1991.
- The budget proposes an 8 percent increase for the Drug Enforcement Administration (DEA), from $694 million in 1991 to $748 million in 1992. DEA's efforts will be concentrated on U.S. major trafficking areas, with 91 percent of 134 new agents either

Table B–2. **DRUG LAW ENFORCEMENT SPENDING INCREASES BY $0.8 BILLION**

(Budget authority; dollar amounts in billions)

	Actual		1992 Request	1991–92	
	1989	1991		Dollar change	Percent change
Criminal justice	2.8	4.4	5.0	0.6	+14
Interdiction	1.4	2.0	2.1	0.1	+4
International	0.3	0.6	0.8	0.1	+20
Intelligence	0.1	0.1	0.1	—	+6

targeted at regions with the most severe drug trafficking crime, state and local task forces, and marijuana eradication efforts.

- The budget proposes an 18 percent increase for the Federal Bureau of Investigation's drug operations, from $175 million in 1991 to $206 million in 1992. With 44 new special agents, the Bureau will have a force of over 1,000 drug agents. Sophisticated and successful initiatives against Colombian and South American trafficking organizations will expand, as will the increased collection of drug intelligence, development of investigative technology, and joint cooperation efforts.
- To prosecute drug dealers and users, the budget proposes $201 million for the drug component of the U.S. Attorneys. A 16 percent increase is proposed for the U.S. Marshals—a total request of $233 million.
- To incarcerate convicted drug offenders, an increase of $350 million is proposed for the drug-related portion of the Federal Bureau of Prisons to $1.4 billion in 1992. This will add 2,450 drug-related prison beds to the Federal prison system.
- To fight drugs at their source, a total of $779 million is requested for international anti-drug programs, an increase of $132 million over 1991. These resources will increase programs in Mexico and provide additional economic assistance to the Andean nations conditioned on their counternarcotics performance and sound human rights policies.
- At the border, $2.1 billion is proposed in 1992 to maintain and improve the drug interdiction effort. Included in this request are resources for 2 additional Coast Guard helicopters to augment sea and air interdiction efforts. Resources also are proposed to support an initiative to move INS border patrol personnel from the interior to the Southwest border in support of land interdiction efforts. The interdiction agencies will continue to integrate and streamline their operations to maximize their effort.

In addition to deterring potential users, law enforcement also appears to be having an effect on drug traffickers. A recent rise in the price of cocaine indicates that it is now more difficult to distribute the drug in this country. In 1982, a kilogram of cocaine was selling at the wholesale level for between $47,000 and $70,000. By 1988, the wholesale price of cocaine had fallen to between $11,000 and $24,000 per kilogram. In June of 1990, the DEA announced that in New York and other major cities the wholesale price of cocaine had risen. Nationwide the price range had moved to between $17,500 and $26,000 a kilo.

This rise in the price of cocaine has been attributed to the law enforcement crackdown. It is too early to determine whether this price rise is a short-term disruption, but if the higher price level is sustained or increased over time, it would be welcome news.

It is also worth noting that the observed rise in price occurred at a time when the demand for the drug was falling. Had demand remained constant, the price increase would have been even greater.

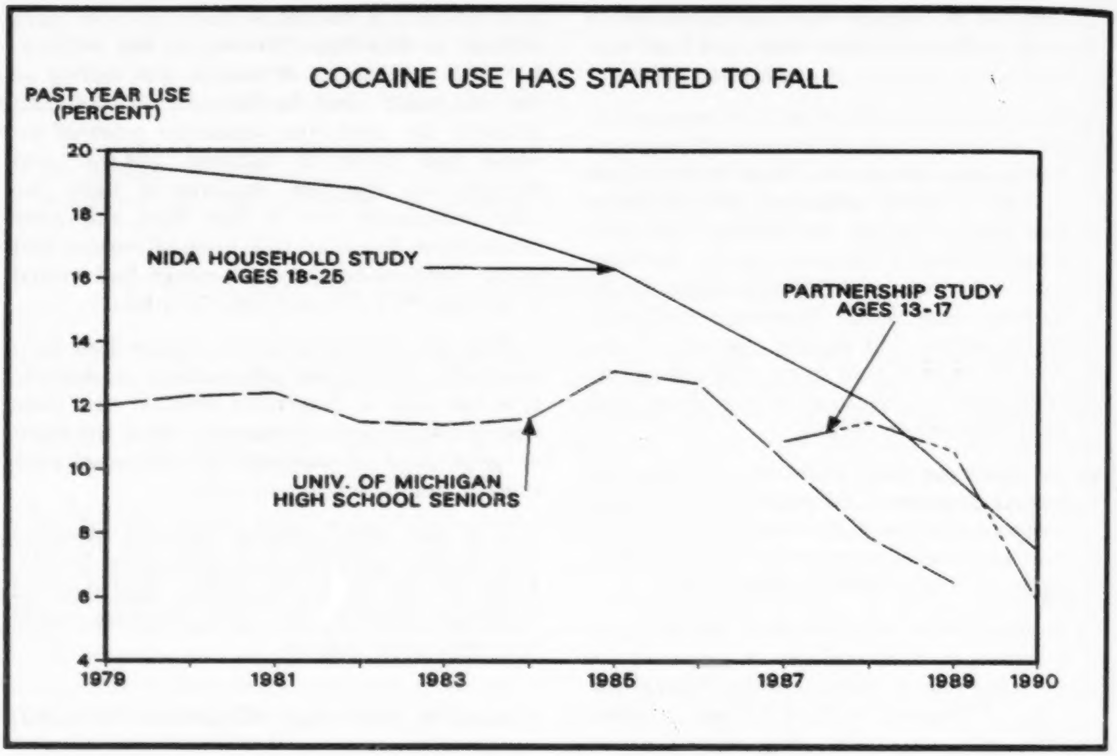
COCAINE USE HAS STARTED TO FALL

The use of cocaine continues to decline—down 72 percent from 1985 according to the National Institute on Drug Abuse (NIDA) 1990 Household Survey. The household survey data are the most recent of several indicators to show a decline in drug abuse across the country. A trend that had been threatening the Nation now appears to be reversing.

Other major national indicators of drug use—the national household survey, the high school senior survey, and the Drug Abuse Warning Network (DAWN)—also show that drug use is declining among the general population in this country.

In addition to a decline in cocaine use, the 1990 national household survey found a 44 percent reduction over the past five years in reported current use (defined as use in the previous 30 days) of any illicit drug—down from an estimated 23 million users in 1985 to 12.9 million in 1990. The estimated number of current cocaine users fell from 5.8 million in 1985 to 1.6 million in 1990.

Other data support the findings of the household survey. For example, the percentage of high school seniors reporting current mari-



juana use has been falling steadily since 1979. Reported cocaine use among seniors has fallen steadily since 1985. While there are limitations to this data (e.g., the sample does not include adolescents who drop out of school), the trend has been consistent. In a survey conducted by the Partnership for a Drug-Free America, a similar decline was observed. The accompanying chart compares the three surveys.

Since the third quarter of 1989, there has been a 30 percent decrease in cocaine-related emergency room admissions. Data on these admissions (DAWN data) are presented in the following chart.[1]

Local statistics show similar declines in drug use. For example, individuals arrested in the District of Columbia have been tested for illicit substances since 1984. In 1984, 15 percent of the arrestees tested positive for cocaine. By the spring of 1988, cocaine use was detected in two-thirds of the adults arrested. In September 1990, the figure had fallen to 51 percent. Although not a national indicator, the D.C. drug testing program does illustrate that progress is being made in a population often missed by the other indicators.

EXPANDING AND TARGETING PREVENTION EFFORTS

The results of the above surveys indicate that fewer people are starting to use drugs and of those who have started, more are stopping. Drug prevention and treatment programs are intended to maintain these gains, and, if possible, accelerate them. Understanding what constitutes effective prevention is expanding and that knowledge is being incorporated into the Federal programs.

The budget proposes an increase of 5 percent over 1991, or $73 million, for drug prevention activities.

Drug prevention programs target children and adolescents, seeking to prevent the onset of substance abuse among non-users, encour-

---

[1] The DAWN system collects data on the number of drug-related medical emergencies and deaths from a sample of hospitals and medical examiners across the country. DAWN data have limitations, but it is possible to assemble a consistent panel of reporting facilities and examine the trends.

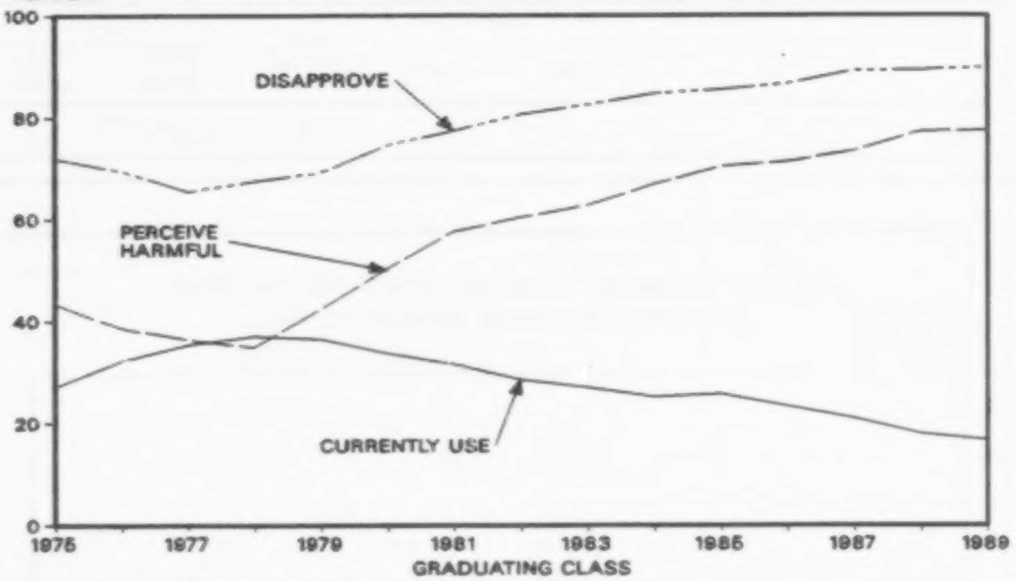
age current users to quit, and discourage current users from progressing to more dangerous practices (e.g., from experimentation to regular use or from non-intravenous to intravenous use). National data as well as prevention experiments confirm that it is possible to change the attitudes and behavior of individuals with regard to drug use.

Although it is tempting to say that drug prevention programs are solely responsible for the reduced drug use among adolescents, prevention programs are probably one of the many factors that contributed to the fall in drug use. However, recent experiments suggest that prevention programs can make a difference. The Midwestern Drug Abuse Prevention Research Project and the RAND Corporation's Project ALERT have shown that specific prevention efforts can reduce drug use relative to control groups.

- The Midwestern Project involved mass media campaigns, school-based education, parent education and organization, community organization, and health policy

USE OF MARIJUANA BY HIGH SCHOOL STUDENTS IS DECLINING; DISAPPROVAL OF MARIJUANA IS INCREASING



Source: National High School Senior Survey (HHS).

changes. The experiment reduced adolescent use of cigarettes, alcohol, and marijuana.

- Project ALERT, a school-based program for adolescents, seeks to curb drug use by motivating young people to resist drugs and helping them acquire the skills to do so. Project ALERT reduced the use of cigarettes and marijuana for both low- and high-risk students and was equally successful in schools with high and low minority enrollments.[2]

Results of these kinds of efforts have been incorporated into Federal prevention efforts.

- The Office of Substance Abuse Prevention in the Department of Health and Human Services finances demonstration projects that coordinate local resources (school, church, business, local government, and civic groups) into comprehensive prevention systems to meet the needs of their communities. The budget proposes to increase funding for community partnership grants by $15 million, from an enacted level of $99 million in 1991 to $114 million in 1992.
- The Department of Education's Drug Free Schools and Communities program provides resources for establishing drug education and prevention programs in the schools. This program has grown dramatically in recent years, from $354 million in 1989 to $606 million in 1991. The budget proposes to increase funding by 4 percent to $632 million. This includes $49.5 million ($25 million over 1991) for emergency grants to schools hardest hit by drug abuse.
- The budget proposes to increase funding for the Department of Housing and Urban Development's Drug Elimination Grants by $15 million or 10 percent, from an enacted level of $150 million to $165 million in 1992. The purpose of these grants is to help provide a drug-free environment for the residents of public housing by de-

veloping new prevention programs within the projects as well as improving building security.

Changing Attitudes in the Workplace.—Just as the attitudes and behavior of adolescents have changed in the high schools, comprehensive drug workplace programs appear to be having an effect on the employed population. One positive indication is that more employers are addressing the issue of substance abuse. According to the Bureau of Labor Statistics, the percentage of employers with a formal substance abuse policy grew by about 60 percent over the last 2 years.

In those instances where drug testing is a component of the program, a quantitative measure is available to gauge progress. The Federal Government provides examples of employers with effective workplace programs. The U.S. military reports that drug testing procedures are responsible for an 82 percent decline in drug use from 1981 to 1989. The Department of Transportation (DOT) witnessed a steady decline in the percentage of samples testing positive for illicit drugs from 0.9 percent in January 1988 to 0.4 percent in November 1990.

Again, this encouraging news must be accompanied by the reality that much is yet to be done, both in the public and private sector. The recent alcohol-related train accident in Boston, in which several people were injured, serves as a reminder of the continued need for workplace substance abuse policies.

IMPROVING AND EXPANDING DRUG TREATMENT PROGRAMS

In the fall of 1990, the Institute of Medicine (IOM) released one of the most comprehensive examinations of the effectiveness and financing of drug treatment.[3] The committee that produced that report cited four specific priorities for public financing:

- ending delays in admission/treatment expansion;
- improving treatment quality;
- targeting pregnant women and young mothers; and
- targeting criminal justice-based treatment.

For 1992, $1.7 billion is allocated for drug treament programs, a $156 million increase over 1991. Each of the four treatment priorities is addressed in the budget proposal.

Ending delays in admission.—The 1992 budget proposes an additional $99 million to create a categorical grant for the purpose of expanding treatment capacity. In addition, a number of other programs and initiatives, as well as technical assistance to the States to enable them to improve their management of treatment resources, will be continued. If the requested resources for drug treatment are provided, an additional 40,000 people would receive services in 1992.

The budget proposes to increase funding for the Department of Veterans Affairs drug treatment programs by $39 million to expand the treatment services provided to the Nation's veterans.

Improving treatment quality.—The Administration believes that a National Strategy to reduce the demand for drug use must simul-

taneously expand treatment capacity and improve the quality of all treatment. Therefore, in addition to creating new public treatment slots, the budget increases funding for investigation into the nature and treatment of addictive disorders.

Research sponsored by the National Institute on Drug Abuse (NIDA) has found that the longer drug users stay with a treatment program, the higher the probability that they will remain drug-free.

The better that drug users are matched to a particular treatment method, the higher is the probability of success in treatment. For example, NIDA research has shown that psychiatric status is a key factor for matching drug abuse patients to treatment programs.[4]

Drug abuse treatment programs should be able to recognize and treat those who suffer from poly-drug abuse (including alcohol) and mental illness. A recent NIDA-sponsored study found that 50 percent of all individuals suffering from a drug disorder (other than alcohol) also suffer from at least one mental disorder.[5]

HHS's Office for Treatment Improvement (OTI) will continue to sponsor research and demonstration grants to learn more about the nature and treatment of addictive disorders. The budget funds several promising programs to improve the quality of treatment:

- $56 million for medications development, an increase of $16 million over 1991. NIDA has developed a unique partnership among government, academic, and private sector scientists to develop new medications for the treatment of drug addiction. The 1992 proposal will allow NIDA to expand its capacity to test these drugs by increasing clinic size and adding additional testing sites.
- $87 million for treatment improvement grants. These grants will finance the Campus Project, "treatment campuses" to serve patients with state-of-the-art treatment methods and associated social services. This will serve as a way for researchers and practitioners to work together in exploring new treatment methods.

Drug use among the general population appears to be declining according to the survey data mentioned above. However, the same data also indicate that some demographic subgroups are disproportionately represented among drug users (e.g., young adults age 18–25), and among those still using drugs, there are some groups whose drug use imposes a greater cost on society than others. The Federal Government has a strong incentive to focus on two sub-groups: pregnant women and individuals within the criminal justice system.

Targeting pregnant women and their children.—Babies who have been exposed to drugs in utero are likely to need longer periods of hospitalization after birth. As these children get older, they can suffer from hyperactivity, poor attention span, and other learning disabilities. The number of crack babies is estimated to be 1 to 2 percent of all live births, or 30,000 to 50,000 babies annually.[6] The HHS Office of Inspector General estimated that the cost for hospital delivery, perinatal care, and foster care through age 5 was over $55,000 per crack baby.[7] This estimate excludes additional costs for developmental intervention, education, and health services through age 5 to prepare the child for school. The Inspector General's report estimated that if these expenses were included, the total cost could triple.

In the budget, funds are requested for additional outreach and treatment for pregnant women and their children. In the Alcohol, Drug Abuse, and Mental Health Administration block grant, 10 percent is to be targeted to women with drug abuse problems out of a total $512 million requested in drug-related funds.

---

[4] The NIDA-developed Addiction Severity Index demonstrates that patients with low-severity illness do equally well in the various types of treatment programs. However, patients with mid-severity psychiatric problems *and without* serious family or employment problems can be effectively treated in outpatient programs. And, of most concern for the treatment community, patients with severe mental illness—a growing subgroup of patients—are particularly costly to treat and may even worsen in normally effective treatment programs.

[6] Douglas Besharov, "The Children of Crack," *Public Welfare*, Fall 1989, pp. 6–11.

[7] Office of Inspector General, Department of Health and Human Services, *Crack Babies*, February 1990.

In addition, $124 million is requested to fund outreach programs for pregnant women and $10 million for the Human Development Services' abandoned infants program.

Targeting individuals within the criminal justice system.—A number of studies have established the link between drug use and crime. In the spring of 1989, a majority of the males arrested in sixteen U.S. cities tested positive for illicit drug use according to the Department of Justice's Drug Use Forecasting report. In ten of the cities, a majority tested positive for cocaine use.

Focusing on individuals within the criminal justice system makes sense for two reasons. First, criminals who use drugs impose greater costs on society through the crimes they commit, as well as the increased burden they place on the criminal justice system. Second, drug users who are on probation or parole, with the threat of being returned to prison or jail, have an added incentive to stay in a treatment program.

The budget proposes to expand the availability of treatment programs in the Federal Bureau of Prisons. Funding for treatment services will increase from $10 million in 1991 to $22 million in 1992.

The Judiciary will request $57 million in 1992 for substance abuse treatment and HHS will request $17 million for criminal justice treatment efforts.

FIGHTING CRIME

Many law enforcement officials cite the rise in drug dealing as one of the causes for increasing violent crime across the country. The falling rate of drug use should continue to push down overall crime rates. However, crime rates are still too high—particularly the murder rate. In the first 6 months of 1990, the FBI reported that the murder rate rose 8 percent nationwide. Though these national figures are frightening enough, one only has to go as far as the morning newspaper to find incidences of communities touched by violent crime.

A fundamental responsibility of government is to protect citizens and their property. Americans deserve to live in a society in which they are safe and secure.

To accomplish this, the 1992 budget increases the resources available for continuing the war on crime. A total of $14.8 billion is requested for law enforcement activities, an increase of 16 percent over 1991. These figures include some of the drug law enforcement programs discussed above.

The enhancements will strengthen the Nation's criminal justice system and increase the certainty of apprehension, prosecution, and punishment. To accomplish this, the Administration's 1992 strategy for fighting crime includes increased funding for law enforcement programs, additional U.S. Attorneys, and increases in prison staffing and bedspaces. Federal agencies will be participating in this law enforcement strategy through the following:

- The 1992 Federal Bureau of Investigation (FBI) budget will grow by 19 percent over 1991, from $1,693 million to $2,021 million. This growth will spread additional crime-fighting resources to most of the FBI's enforcement programs. Additional resources are requested to address the escalation in Asian organized crime activity and to combat Mexican and Colombian drug trafficking groups. Over $64 million of the Bureau's $328 million 1992 increase address national security programs—185 agents are being added in this enforcement area. Funds are also included to continue the process of automating fingerprint identification nationwide. Once in place, as many as 29,000 fugitives can be readily identified by law enforcement officers.
- The FBI budget also requests 171 agents for white collar crime programs. This enforcement area will experience the greatest growth rate in 1992, increasing by $30 million. Savings and loan failure investigations, HUD and bankruptcy fraud, and public corruption criminal activity all require more 1992 enforcement resources. Bank fraud and embezzlement funding ac-

count for 55 percent of the increased resources. In 1990, the FBI was responsible for over 2,200 savings and loan fraud convictions and the recovery of over $500 million in restitution settlements.

- For 1992, the request for the Immigration and Naturalization Service (INS) represents an increase of 14 percent over 1991, from $887 million to $1,008 million in 1992. These additional resources will increase staffing and bedspace at INS detention facilities for criminal aliens. Crimes committed by aliens are rising disproportionately in relation to the general population and include more violent and drug-related crimes. Funding is also provided to increase the presence of the Border Patrol on the Southwest border.
- To increase the certainty that criminals are held accountable for their offenses, $779 million is requested for the U.S. Attorneys, an increase of $104 million or 15 percent over 1991. These resources will enable the attorneys to prosecute more violent crimes, weapons offenses and drug cases. The attorneys also will concentrate on the prosecution of financial institution fraud, white collar crime, and debt collection. New resources for affirmative civil litigation will permit the attorneys to begin more aggressive prosecution of fraud, returning more dollars to the Treasury.
- If offenders are going to be held accountable for their crimes, more space is needed in the prisons. The budget provides over $350 million for new prison construction, providing an additional 3,600 bedspaces by 1996. To run the current program and to staff the new prisons as they come on line a total of $2.2 billion is requested for the Bureau of Prisons, an increase of 27 percent over 1991.
- The request for the Judiciary represents a 25 percent increase over 1991, from $2.0 billion to $2.6 billion in 1992. These funds will support 85 new judgeships recently authorized by Congress to address the increased backlog of criminal cases.
- The budget proposes a 20 percent increase for the U.S. Marshals Service, from $290 million in 1991 to $347 million. These resources will support additional deputy U.S. Marshals for the protection of the additional judges provided in the Federal Judgeship Act, expanded witness protection efforts, and the guarding of prisoners.

Strengthening Criminal Statutes.—Continuing the fight against crime is more than just a question of resources. In addition to expanding the criminal justice system, the Administration remains committed to strengthening current laws. This includes increasing penalties, eliminating repetitive delays in carrying out judicial sentencing, and allowing the use of evidence obtained in good faith by law enforcement officers.

This fight also is the responsibility of governments at all levels. For example, each National Drug Control Strategy has recommended tough anti-drug legislation for the States to adopt. Although many States have adopted much useful legislation, it is important that all States do so.

Those who commit crimes should and must be held accountable for their actions if citizens and their property are to be protected. This requires the sustained cooperative commitment of all law enforcement officials—Federal, State, and local—in all aspects of the criminal justice system.

V.C. DISTRIBUTING FEDERAL BENEFITS MORE FAIRLY

HIGHLIGHTS

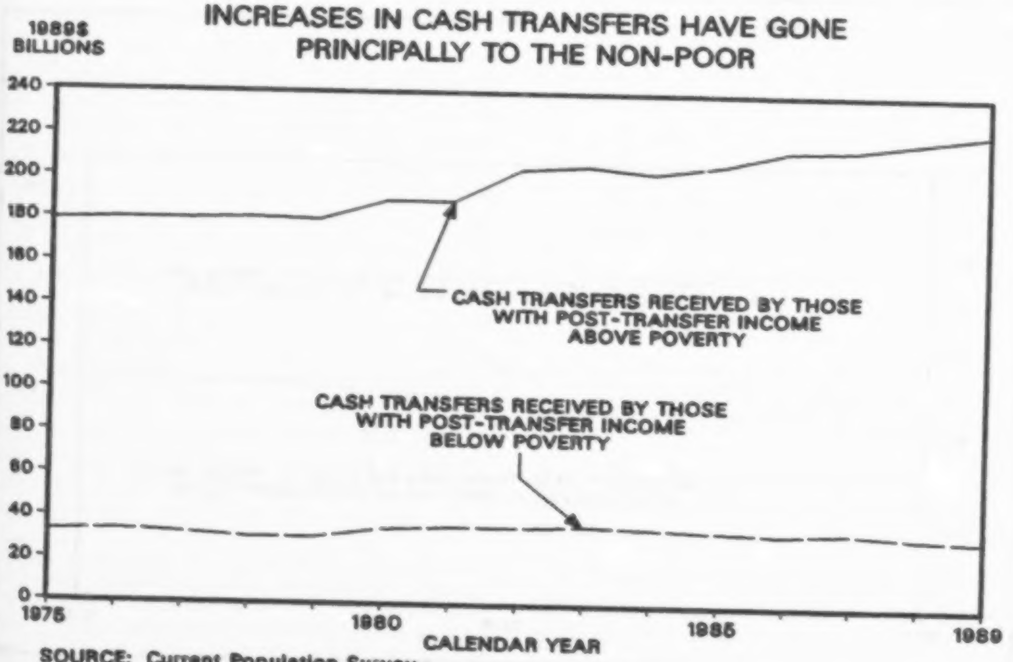
Since the 1960s, there has been explosive growth in the level of Federal expenditures for payments to individuals. Ideally, economic growth and opportunity would be sufficient to eliminate the need for such governmental transfer payments. In reality, however, a democratic market economy will continue to need a social insurance system. It should not encourage dependency. But it must be available—at least as a "safety net" for the needy.

The notable characteristic of the growth of payments to individuals in the past quarter century, however, is that the growth has gone principally to the *non*-poor. Total payments to individuals have risen to 46 percent of the budget, most of which does not go to the poor, as illustrated in the charts that follow.

Resources are scarce. Legitimate claims are substantial. In order to preserve a responsible "safety net", therefore, it is likely to be necessary—and in any case appropriate—to reduce the subsidies for those who clearly are not needy. Thus, the budget initiates a set of proposals to begin to reduce governmental subsidies for those who are not in need.

- Medicare beneficiaries, regardless of their income, receive an average subsidy of $2,445. The budget proposes that the wealthiest seniors (those with annual incomes over $125,000) should pay higher premiums under the voluntary Part B portion of the program, reducing their average 1992 subsidy to $1,690.
- Significant farm commodity program payments go to individuals with non-farm incomes over $125,000. Eliminating payment

INCREASES IN CASH TRANSFERS HAVE GONE PRINCIPALLY TO THE NON-POOR



SOURCE: Current Population Survey.

eligibility for these upper-income people would not threaten the operation of farm programs and would better target benefits to active farmers.

- Higher education legislation in the late 1970s diluted grant aid to low income students. The budget proposes that student assistance in the form of Pell Grants be more focused on low income students who have the most limited access to higher education.
- Child Nutrition programs provide subsidies to all school-age children, regardless of their family's income. The budget supports continued increases in funding for the School Lunch program, but redistributes a portion of the subsidy that benefits higher income families in order to provide more assistance to lower income children.

FAIRNESS IN FEDERAL BENEFIT PROGRAMS

A significant share of government spending on benefits goes to households at the lower end of the income distribution. In calendar year (CY) 1989, for example, 47 percent or $184 billion of all cash and in-kind transfer payments were received by households with incomes in the bottom fifth of the household income distribution. However, $26.5 billion of these benefits went to households with incomes that put them in the top 20 percent of all households.[1] Substantial amounts of other government spending, such as farm price subsidies, also are received by those whose incomes put them well above the bottom fifth of the income distribution.

As Federal spending and the incomes of all segments of the population have increased over time, Federal benefits increasingly have been provided to those who are not poor. The preceding charts that provide information on the amounts and percentages of cash transfers going to those who are poor and non-poor illustrate this trend. Over the past two decades, government assistance in the form of cash transfers has increased significantly. In constant dollars, the amounts going to the poor essentially have remained flat, although they vary somewhat with the business cycle. In contrast, the amounts going to the non-poor have increased. As a result, the shares of cash transfers received by the non-poor have increased, whether people are classified as poor or non-poor using the official definition of poverty (all cash income, including government transfer payments) or an alternative measure that excludes government transfers. (A consistent data series on the total amounts of noncash benefits received over time by those at various income levels is not available. However, program data suggest that the trends are similar to those for cash transfers.)

This is not to suggest that any of the measures used above should be adopted as a universal standard in determining eligibility for Federal benefits. Federal programs and the purposes they serve are too diverse to be governed by a single set of economic criteria. The data have been presented for two inter-related reasons:

- to indicate that Federal spending usefully can be examined to determine whether decisions on eligibility made in the past result in the best use of scarce Federal resources today; and
- to counter the contention that "fairness", of necessity, means more Federal spending rather than more effective targeting of spending to reach those in need.

Wiser and more equitable distribution of Federal benefits is key to fairness and to meeting critical national needs.

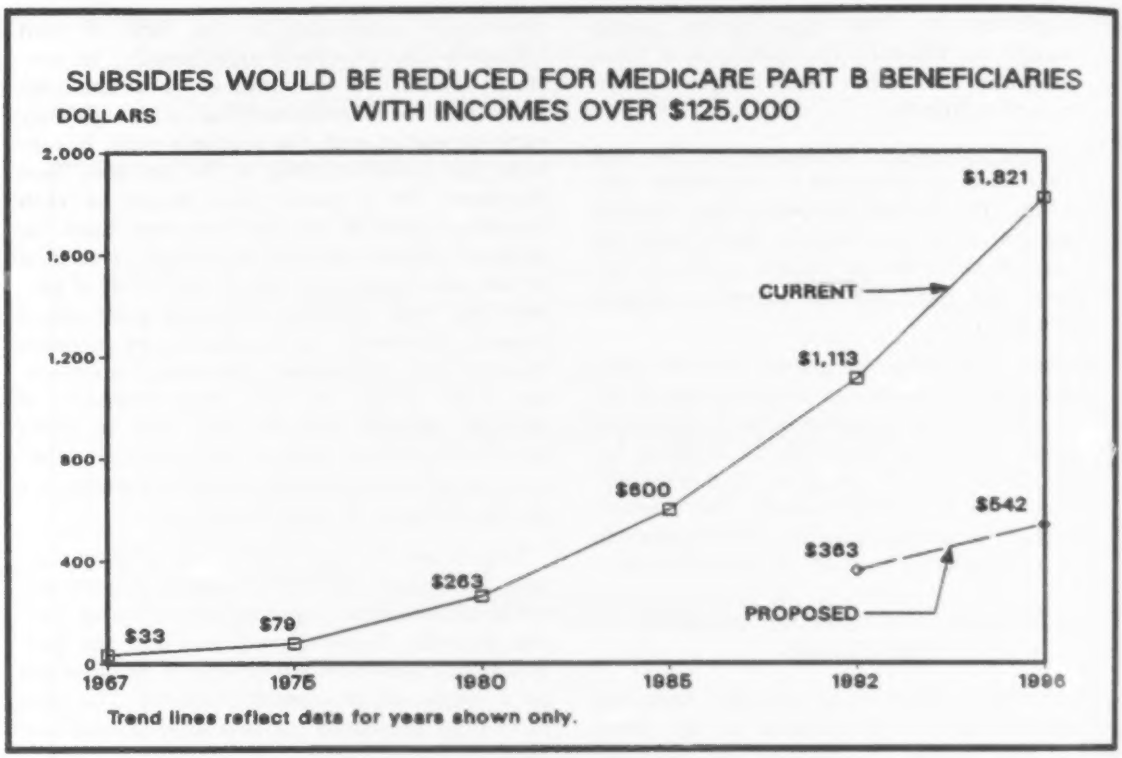
PROPOSALS DESIGNED TO DISTRIBUTE BENEFITS MORE FAIRLY

Medicare: Income-testing Premiums for the Wealthy to Reduce Large Health Care Subsidies for Society's Most Fortunate

Medicare has been successful in providing quality health care to more than 33 million participating seniors. A strong argument can be made, however, that Part B provides benefits beyond the original intent of the program—insuring that affordable, quality care is

---

[1] Benefits include all cash and noncash (food, housing, and medical) government transfers reported in the March income supplement to the *Current Population Survey* (CPS). The market-value approach is used to value noncash benefits. Household quintiles are based on post-tax, pre-transfer income, including the value of employer-provided health insurance but excluding capital gains. Government benefits are underreported in the CPS so that actual benefits received are larger than those reported.



SUBSIDIES WOULD BE REDUCED FOR MEDICARE PART B BENEFICIARIES WITH INCOMES OVER $125,000

Trend lines reflect data for years shown only.

available to seniors—by providing large subsidies to the wealthy.

Part B of the Medicare program is voluntary. It primarily covers physician and outpatient services. At its inception in 1967, Part B costs were to be split 50/50 between beneficiary premiums and general fund subsidies. Subsequent law changes, intended to shield low income seniors from spiraling health cost inflation, have changed that split. In 1992, 25 percent of the costs ($31.80 per month) will be paid by the beneficiary and 75 percent (approximately $95) by the general fund subsidies. The result is a 1992 Part B Federal subsidy of $1,113 for every senior, regardless of income.

In addition to the Part B subsidy, wealthy seniors benefit from Part A Hospital Insurance (HI). This mandatory coverage is funded from the HI Trust Fund, to which employees pay a 1.45 percent employee payroll tax on annual earnings up to $125,000. Most current Medicare beneficiaries have paid for a small fraction of the benefits they will receive under Medicare HI. The average actuarial subsidy for each current Part A beneficiary is $1,330 per year.

The average Part A and Part B subsidy to seniors with incomes over $125,000 is almost $2,445 in 1992.

The budget does not propose to change Part A, even for the wealthiest Medicare beneficiaries. It does propose to reduce the Part B subsidy for individuals with annual adjusted gross incomes (AGI) above $125,000 and couples with AGIs above $150,000. These beneficiaries would be required to pay a Part B premium equal to 75 percent of total Part B costs. Even with this change, these high income seniors still would receive a 25 percent or $363 Part B subsidy in 1992 ($542 in 1996) and a combined average Part A and Part B subsidy of $1,690 ($3,370 in 1996). Medicare Part B would continue to be a very good value for these beneficiaries. The Department of Health and Human Services anticipates that few seniors would opt to drop this voluntary coverage as a result of the proposed change, although they would have this option.

Agricultural Subsidies: Imposing a Means Test

Agricultural commodity programs help to regulate farm plantings and the prices of many commodities, and they provide direct income support payments to eligible producers of major crops such as wheat, corn, sorghum, barley, oats, cotton, and rice. "Deficiency payments", which constitute the largest share of outlays for these programs, pay farmers the difference between actual market prices and statutory "target prices" on their eligible output. These payments go to individuals regardless of their incomes, including those who earn substantial income from non-farming sources.

In recent years, deficiency payments have gone to more than 10,000 individuals whose annual adjusted gross income from non-farming sources has exceeded $125,000. Producers in this category have been about two percent of all program participants and they have received, according to preliminary estimates, about $90 million in income subsidy payments each crop year. A means test could be designed to make these upper-income individuals ineligible for direct farm support. It would eliminate payments to highly paid professionals or wealthy investors in order to target payments to those who depend on farm income to assure their farm's viability and support their families.

This proposal is consistent with others in this budget that are designed to distribute Federal benefits more fairly. The Administration does not propose to reopen the recently enacted 1990 Farm Bill and Budget Reconciliation Act that took many months of hard work and debate to accomplish. The proposal is advanced as a matter of equity.

Student Aid: Restructuring Higher Education Act Assistance to Serve the Needy Better and to Reward Student Achievement

Although States provide the largest subsidies to higher education, the bulk of their support is provided to institutions. State subsidies are designed primarily to reduce tuitions for all students, regardless of their families' incomes. Because States supply relatively little direct assistance to students, Federal programs authorized in the Higher Education Act are the primary source of aid for students from low income families. These programs—primarily Pell Grant and Guaranteed Student Loan (GSL)—finance 68 percent of all direct aid to students in post-secondary education.

Federal student aid originally was intended to ensure that students from low income families would have access to higher education. In the late 1970s, concern that rising college costs were making higher education less affordable for many families led to the enactment of legislation that increased the share of Pell Grant program funds going to students from higher income families. This legislation diluted the effects of Pell Grants on low income students because many more students, including those from upper-middle class families, qualified for an only slightly increased pool of grant funds. Consequently, low income students have had to borrow increasingly larger amounts from the GSL program to pay for their educations.

Students from low income families are more likely to default on loans, and many believe that such students may avoid higher education altogether for fear of incurring excessive debt. Increasing low income students' access to higher education—and the economic rewards in the labor market that accompany successful completion of additional years of schooling—is a primary goal of the budget.

To this end, the budget proposes to reallocate student aid funds. For Pell Grants, the budget requests $5.8 billion, a $400 million increase over the 1991 appropriation. Total GSL volume would be $11.7 billion, $721 million more than in 1991. Under the Administration's proposed reforms, more Pell Grant aid would be provided to students from the lowest income families. At the same time, students from somewhat higher and middle income families would be able to borrow larger amounts under the heavily subsidized GSL program, meeting the needs these families also have in financing higher education for their children.

The maximum Pell Grant award in 1992 would increase by 54 percent over the 1991 level, rising by $1,300 to $3,700. The share of Pell Grant funds provided to students from families with incomes under $10,000 would increase from 63 percent to 67 percent, and their average award would rise from $1,708 to $2,191. Annual limits in GSL would also increase for students in all years of postsecondary study, as shown in Table C–1.

Table C–1. **PELL GRANT AWARDS FOR LOW INCOME STUDENTS AND ANNUAL GSL LOAN LIMITS: 1992 CURRENT LAW AND PROPOSED**

	1992		Increase
	Current	Proposed	
Pell Grants for students with family income below $10,000:			
Total aid (in millions of dollars)	3,268	3,846	578
Average award (in dollars)	1,708	2,191	483
Stafford Loans (in dollars):			
First and second years	2,625	3,500	875
Subsequent undergraduate years	4,000	5,000	1,000
Graduate study	7,500	7,500	
Supplemental loans for students (in dollars):			
First and second years	4,000	4,000	
Subsequent undergraduate years	4,000	6,000	2,000
Graduate study	4,000	10,000	6,000

Under the proposed reallocation of aid, students from low income families—those most likely both to need encouragement to pursue higher education and to default under a heavy debt burden—would not have to borrow heavily. Higher income students, who are more likely to accept and pay off debt, would qualify for decreased grant amounts and increased loan subsidies. As a result of the budget proposals, thus, more academically qualified low income students would be willing to try higher education and would reap the benefits of this schooling in higher earnings. Families with greater ability to repay loans would have increased access to low-cost loans and would be able to continue to finance college educations for their children.

Health Education Assistance Loans and Health Professions Student Loans: Targeting Health Professions Assistance to the Disadvantaged

The Health Education Assistance Loan (HEAL) Program guarantees 100 percent of banks' loans to health professions students in a wide range of health disciplines. Since its inception in 1976, HEAL has insured more than 295,000 loans totaling over $2.1 billion in principal.

HEAL was originally intended to provide financial relief to students in high-tuition medical schools and assure disadvantaged students access to health professions educations. However, HEAL does not target financial assistance to disadvantaged students. Instead, HEAL currently guarantees approximately $260 million annually in loans for health professions students *regardless of income*. In fact, HEAL's eight percent up-front premium and high interest rate (11–12 percent in 1989 and 1990) make HEAL primarily an option for higher income students. HEAL guarantees loans to students in critical and noncritical health professions alike, and many of HEAL's defaults occur in health disciplines that are not in short supply. Borrowers pursuing degrees in chiropractic and podiatry, for example, are among the leaders in HEAL defaults.

Although intended to be self-financing, HEAL has been unable to support itself; its up-front premiums have been insufficient to cover its high defaults. Estimates indicate that HEAL's annual cohort default rate exceeds 20 percent. High defaults caused Congress in 1990 to appropriate $25 million to maintain the solvency of the HEAL program. Credit reform changes enacted as part of the 1990 Budget Enforcement Act, which require that implicit subsidies in loan programs be estimated, underline the fact that HEAL is not self-financing: HEAL will require a total of approximately $61 million in 1992 to cover past defaults and to pay defaults from new loans. In subsequent years, HEAL will continue to require appropriations to sustain its operations and to cover its rising defaults.

Rather than continuing to provide untargeted health professions assistance

best copy available

through HEAL's costly system of loan guarantees, which benefit many questionable institutions, the budget proposes to phase out the HEAL program. It would be replaced by an enhanced Health Professions Student Loan (HPSL) program, which would better target Federal assistance to disadvantaged health professions students, particularly in needed disciplines.

HPSL provides direct loans, through a revolving fund, to low income health professions students who apply for assistance through their schools. The budget proposes to make $15 million in new capital contributions to HPSL, which would represent a down payment on a multiyear HPSL capitalization effort ($90 million over six years). These new contributions, along with the $60 million already available each year from HPSL's $375 million revolving fund, would enable HPSL to support and sustain 10,000 loans annually to financially needy students, providing an average annual award of $8,000. (Currently the average annual award is $3,000, provided to 20,000 borrowers.) Chiropractic and podiatry students, who account for 41 percent of HEAL's defaults and 21 percent of its loan volume, would not be eligible to participate in HPSL. The larger, targeted awards provided under the enhanced HPSL program would enable disadvantaged students to obtain more assistance in completing their health professions training. At the same time, the exclusion of chiropractic and podiatry studies from the program would ensure that needy students are served by health professions institutions that have earned the public trust and are worthy of receiving taxpayer support.

School Lunch: Reallocating Subsidies to Low Income Students

Every school day, the National School Lunch Program serves meals to approximately half of the nation's 50 million elementary and secondary students. The program provides meal subsidies to all participating students *regardless of family income*, as shown in Table C–2. Students from families with incomes greater than 185 percent of poverty receive "paid" meals, which are subsidized at the rate of about 31 cents per day or $56 per year. Students from families with incomes between 130 percent and 185 percent of poverty receive reduced-price meals, while those from families with incomes less than 130 percent of poverty receive free meals.

The budget proposes to maintain the current law level of support for the School Lunch program and to improve program fairness by reallocating subsidies to provide a greater share to poor and near-poor children. Because the budget proposal retains the program's current three-tiered structure, no new paperwork burdens would be imposed on schools or families with children in the program.

Under the budget proposal, the maximum charge for a reduced-price lunch would be reduced from 40 cents to 15 cents. This reduction would save each student eligible for reduced-price lunches (family income between 130 and 185 percent of poverty) as much as 25 cents per day or $45 per year. Students from families with incomes above 185 percent of poverty would pay, at most, an additional six cents per day or $11 per year. Because the reduction in the subsidy for "paid" lunches is modest, it is expected to have little, if any, effect on

Table C–2. **1992 SCHOOL LUNCH SUBSIDIES UNDER CURRENT LAW**[1]

	"Paid" (Income above 185% of poverty)	Reduced-Price (Income between 130% and 185% of poverty)	Free (Income below 130% of poverty)
Per lunch subsidy	$0.31	$1.30	$1.70
Average daily participants (in millions)	12.8	1.7	10.1
Total annual subsidy (in millions)	$375	$351	$2,975

[1] Subsidy value includes both cash and commodities. All per lunch subsidies are rounded to the nearest cent.

pages tightly bound

participation of students from higher income families. Schools, of course, would be free to absorb some or all of the reduction in "paid" lunch subsidies.

There are strong arguments for reducing or eliminating *all* school lunch subsidies for students from upper income families. The Administration's primary concern, however, is to transfer more of the available resources to lower income children. Previous attempts to reallocate school lunch subsidies have failed because of charges that the program was being "cut." Therefore, the budget proposes to fund the program at the current law level of $4.3 billion (an increase of $244 million over 1991) and retain some of the subsidy that benefits students from high income families in the interest of advancing the cause of redistribution.

Veterans Dependency and Indemnity Compensation: Standardizing Benefits to Increase Payments to Survivors of Lower-Rank Military Personnel

The Dependency and Indemnity Compensation (DIC) program provides monthly payments to surviving spouses, children and dependent parents of military personnel who die in service and ex-servicemembers who die as a result of service-connected illness and injuries. Payments are based on military rank. During 1990, nearly 342,000 beneficiaries received $2.4 billion in survivor payments, with surviving spouses comprising 80 percent of the beneficiaries. Surviving spouses of lower-ranked enlisted members (E–6 and below) constitute almost 70 percent of surviving spouses.

The premise that DIC benefits should be related to a member's active duty pay grade results in a benefits structure that treats survivors differently based on the same misfortune—a service-connected death. Under the current rate structure, monthly payments vary from $564 for survivors of the lowest-ranked enlisted members to $1,550 for survivors of the Joint Chiefs of Staff. The current rate structure does not recognize that survivors of lower-rank enlisted personnel are less likely than survivors of officers and other higher-rank members to receive additional benefits from sources other than DIC, such as Social Security and military retirement.

The budget proposes to standardize the DIC benefit structure in a way that increases benefits for survivors of low-rank personnel. Under this proposal, monthly payments to survivors of lower-rank enlisted members would be raised annually until their benefits equalled the rate payable to survivors of members rated E–6. These benefit increases would be provided to both current DIC recipients and to those who come onto the rolls in the future. Survivors of higher-ranked members who are new beneficiaries also would be paid benefits equal to the rate for survivors of E–6 personnel. Survivors of higher ranked members already on the DIC rolls would not be affected by the proposed changes. Table C–3 illustrates the proposed DIC rate structure.

Railroad Retirement: Assuring that Basic Social Security Benefits are Available to Rail Industry Families

The rail industry is the only U.S. industry not covered directly by Social Security.[2] Rail employees and employers pay social security-equivalent taxes, and—with some exceptions—rail employees and their families are entitled to equivalent benefits. Because railroad employment has declined over time, taxes paid by the rail sector are not sufficient to cover rail social security benefits. However, under a "financial interchange" between the rail social security and the Social Security trust funds, the rail system is guaranteed enough money to pay benefits identical to those provided to regular Social Security recipients. Even though funding is available, because of exclusions in the Railroad Retirement Act, the Railroad Retirement Board does not pay rail social security benefits to four categories of people for whom benefits are payable under Social Security: certain children of retired or disabled annuitants, widow(er)s, spouses, and divorced spouses.

Rail social security coverage gaps affect some of society's most vulnerable groups: children, elderly divorced spouses, and survivors. As a result of the Railroad Retirement Act exclusions, individuals in these groups who cannot rely on the safety net provided by So-

---

[2] A few categories of employees such as certain foreign agriculture workers, the Amish, ministers, and fraternity/sorority domestic service functionaries can be excluded from coverage, but no sector-wide analog to the case of rail workers exists.

Table C–3. **PROPOSED VETERANS DEPENDENCY AND INDEMNITY COMPENSATION MONTHLY BENEFITS**[1]

(In dollars)

Member's Pay Grade	1991	1992	1993	1994	1995	1996
Payments for Current and Future Survivors:						
E–1	566	585	603	641	660	677
E–2	583	585	603	641	660	677
E–3	599	601	603	641	660	677
E–4	636	638	640	641	660	677
E–5	653	655	657	659	660	677
E–6	669	671	673	675	676	677
Payments for Future Survivors:[2]						
Greater than E–6	701–1,556	671	673	675	676	677

[1] Estimates assume annual cost-of-living adjustments.

[2] Current beneficiaries are not affected by the proposed reform.

cial Security may be forced to seek State or federally funded public assistance, such as Aid to Families with Dependent Children and Supplemental Security Income.

The budget would ensure that all rail families receive basic Social Security benefits. Any family member ineligible under railroad retirement exclusion rules could apply directly to Social Security for benefits, which in 1992 would total an estimated $39 million. The proposal would not affect Social Security's actuarial balance because the financial interchange between Social Security and rail trust funds would automatically be reduced by $39 million to reflect this change.

VI. ADVANCING STATES AS LABORATORIES

VI. INTRODUCTION

The United States Federal system of government has the special advantage of permitting and encouraging experimentation in new approaches to various kinds of problems on a less-than-national scale Supreme Court Justice Louis D. Brandeis capsulized this concept in a famous dissenting opinion in which he said that "a single courageous State may, if its citizens choose, serve as a laboratory; and try novel social and economic experiments without risk to the rest of the country."

State experimentation is partly spontaneous and partly consciously fostered and promoted by the Federal Government through demonstration programs and other means. Chapter VI.A. describes areas where the Federal Government is promoting innovation. Chapter VI.B. recounts some "natural" experiments in the States. Chapter VI.C. provides information, as required by law, on Federal grants to State and local governments.

State laboratories are currently active in a wide variety of fields from welfare to the environment. Any laboratory experiment, to produce useful results, must be carefully evaluated, and evaluations, too, are proceeding with a new vigor after a period of relative quiescence.

It was State experimentation in the difficult area of moving welfare recipients into jobs that led to the Federal Family Support Act of 1988 (known colloquially as "welfare reform"), and that act itself set in motion extensive evaluation of the changes it required. There will be a multi-year, 10-state evaluation of the new JOBS program established by the Act, which will make possible assessment of the different approaches permitted the states. The 1990 farm legislation authorized large-scale Food Stamp program demonstrations seeking to find ways of coordinating the Food Stamp job training programs, which have so far proved disappointing, and the JOBS program.

The emphasis on experimentation, State variations, and careful evaluation also characterizes the 1990 Affordable Housing Act and will be an important feature of the Administration's forthcoming amendments to the Job Training Partnership Act, through the proposed Youth Opportunities Unlimited demonstration program. Future changes in the broad area of child welfare and foster care legislation will also likely emphasize experimentation.

In a broader sense, the Administration will seek to transfer to the States a broader range of authority and resources—as discussed in the Director's Introduction. (See Chapter II.).

The Administration will also repropose legislation granting authority for waivers and more flexibility to reduce regulatory constraints embodied by statute in programs involving Federal grants to the states. Such constraints characterize grant programs in education, transportation, health, training and social services. Waivers and flexibility are important components not only of the reforms associated with the educational goals adopted by the President and the Governors in Charlottesville, VA in 1989 but also of other initiatives leading toward an escape from poverty. The waivers are necessary in many cases to permit innovative approaches in the States and localities.

The greatest ferment of experimentation in the states as the 1990s began was in two areas—education and health care.

Even before the adoption of the six educational goals at Charlottesville the States were trying out a variety of approaches to improving the level of achievement in the public schools. The adoption of the national goals has given additional impetus to experimentation. The Federal Government has helped in a number of ways, but there has been particular emphasis on one educational innovation—the concept of "choice", in which parents and children are given more freedom in the choice of what school to attend.

The Secretary of Education in 1990 established a new Center for Choice in Education as a resource for information on what is occurring in various States and to provide assistance to those States or school districts interested in educational choice. The 1992 budget, as briefly described below and more extensively in Chapter V.A., moves much further by providing explicit financial assistance to States and school districts for choice-based programs and experiments.

In health care the experimentation has been for the most part at State inititative, without direct assistance from Washington. The aim of the various States has been to find ways to deal with the problems of *access* to health care for those without private insurance and ineligible for medicare or medicaid, and the steeply rising *cost* of medical care. A number of States have enacted legislation in one or more of these areas, and examples of the rich variety of approaches will be described below.

Whether the field be transportation or the environment, welfare or education, the nation as a whole can only benefit from the exploratory work in the States.

VI.A. ENCOURAGING EXPERIMENTATION

EDUCATIONAL CHOICE

The pressing need for renewed efforts to achieve educational excellence was given national prominence by the 1983 report, "A Nation at Risk" and reached an historic mark at the Education Summit held by the President and the Nation's Governors in Charlottesville, Virginia, in September 1989. The States and local school districts are responding with a host of reforms and potential improvements, but the evidence is clear that much more needs to be done.

With 16,000 school districts and 100,000 public and private elementary and secondary schools across the country, there are myriad opportunities to test new approaches to raising educational achievement. These natural experiments vary greatly. Educational choice is one such experiment that many now believe holds great promise. In general, choice plans allow parents some latitude to select the school their children attend based on which school they believe offers the highest quality education.

Choice leads to healthy competition among schools by focusing on proven educational quality as the way to attract students. Although some believe choice programs work against public schools, that is not the case. Competition, among public schools and between those schools and private education, is a powerful instrument for improved quality of all forms of education.

A number of States and local education agencies have already developed innovative, successful choice plans.

- Milwaukee, Wisconsin offers low-income students the option of attending any qualified non-sectarian private school to which they have been accepted, and pays the school up to $2,500 for the child. Because of the way it was enacted, not because of its content, this program was ruled in violation of the State constitution in November 1990.
- Minnesota was the first State to implement an open enrollment policy that enables parents to select a public school outside their normal district boundary. Minnesota also offers a range of other choice options, including allowing 11th and 12th graders to attend postsecondary institutions and receive high school credit; special alternative settings for potential dropouts that make it possible for them to complete requirements and receive a high school diploma; alternative settings for older students; and special programming for pregnant teenagers and teenage parents that make it possible for them to complete high school.
- District 4 in East Harlem, New York allows students to choose from among 50 programs in 23 school buildings, each devoted to a particular theme. School types include the Jose Feliciano School for the Performing Arts, the Academy of Environmental Sciences, the Isaac Newton School for Science and Mathematics, and the School of Science and Humanities. School directors and teachers participate in the hiring of new faculty members and in the scheduling and design of courses. The increased choice has been accompanied by better teacher morale, substantially reduced vandalism and truancy, and dramatic increases in student test scores.

The Federal Government has an important role to play in expanding educational choice, by encouraging more States and local education agencies to implement choice plans and by enhancing their ability to do so with Federal education funds. The 1992 budget and the Administration's legislative program include a broad menu of proposals.

All the educational choice proposals are described in the chapter "Increasing Choice, Expanding Opportunity, and Providing Hope to Distressed Communities". The ones that are most directly concerned with encouraging and helping States to experiment with choice are:

- *The Educational Choice Program Support Fund.*—Legislation will be proposed to authorize $200 million per year with which the Education Department would make incentive grants to school districts which have qualified programs. Qualified programs include allowing the choice of public or private schooling and giving the parent control over sufficient funds to make the choice meaningful. The funds will not pay for choice programs; they will be incentive grants to areas that implement such programs, and will have to be used to pay for additional educational services.
- *Choice Demonstrations of National Significance.*—To help States and school districts learn how to design additional workable models of choice plans, authority and funding will be requested to establish carefully evaluated demonstration approaches.
- *Choice in the Education block Grant.*—The Education Block Grant ("Chapter 2"), provides funds to States and school districts to support education reforms. Authority will be sought to permit States to retain up to 50 percent of these funds and to encourage them to use the funds to support choice plans.

ENTERPRISE ZONES—LABORATORIES AT WORK

The idea of enterprise zones as a means of dealing with the problems of distressed communities emerged in the 1970s in Great Britain. Two men of different political ideologies—Peter Hall, a socialist academic, and Sir Geoffrey Howe, a conservative Chancellor of the Exchequer in the Thatcher government—developed the idea, which was based in part on the successful use of tax-free zones in such Asian countries as Hong Kong and Taiwan.

In the United States the idea was given a particular boost by the introduction of the Kemp-Garcia bill in the U.S. House of Representatives in 1978. As in Britain, the two sponsors—Representative Jack Kemp, Republican, and Robert Garcia, Democrat, both of New York—represented opposite ends of the political spectrum. The proposed creation of enterprise zones became an element in Ronald Reagan's campaign for President in 1980. Paradoxically, though the idea came from Washington, no meaningful Federal enterprise zone legislation has ever been enacted. However, the idea spread rapidly and by now about three-fourths of the States are experimenting with enterprise zones—ranging in number from only one to more than 100 zones per state.

The principle, which is now widely understood, is that the best single remedy for the ills of poverty and its related social pathologies is jobs. Enterprise zones are defined geographical areas, typically distressed sections of cities but also rural areas, where governments authorize a variety of incentives for the location of job-creating businesses. The principal incentives involve tax relief or abatement of various kinds, and relief from burdensome regulation is sometimes also a part of the package.

The experiments in the States have now been under way long enough to permit meaningful evaluation of the results. The results are on the whole promising and will be described in this section. However, an important *caveat* is in order.

The State experiments have an unavoidable handicap: They can offer relief only from *State and local* taxes and regulations. The impact of such relief on business location and employment decisions would obviously be significantly greater if Federal taxes were also involved. As a very rough measure of the incremental impact of Federal enterprise zone legislation, total Federal tax receipts are approximately twice the combined total of State and local taxes, and thus Federal tax relief may be expected to have more impact than State and local tax relief. The combination of the two would clearly be the most potent package of all, and this has not yet been tried.

The President again this year is proposing Federal enterprise zone legislation that would authorize 50 zones, both urban and rural. In zones that are designated under the legislation there would be no capital gains tax on gains from investment in tangible enterprise zone business assets held for at least two years; a refundable tax credit of 5 percent of the first $10,500 in wages earned by low-income employees; and "expensing" by individuals for purchase of stock in enterprise zone companies, with a yearly deduction limit of $50,000 per individual and a lifetime cap of $250,000. These would be powerful incentives for location of productive enterprise in enterprise zones.

While all enterprise zone programs in the States stem from the underlying principle of seeking job creation as a remedy for localized poverty, the programs vary in their details, including the tax incentives used.

Evaluation of Enterprise Zones

The most extensive evaluation of State enterprise zone programs undertaken by the Federal Government was done for the Economic Development Administration of the Department of Commerce by the Center for Regional Business Analysis of the College of Business Administration of Pennsylvania State University, completed in April 1989.

The Penn State evaluation finds that "state-sponsored enterprise zone programs are characterized by considerable diversity in zone designation criteria, the incentives provided by State and local governments, and the areal scales and geographic locations of the zones". For example, while all zones emphasize job creation, some place more importance than others on such goals as "neighborhood revitalization, community development, and the improvement of health, safety and welfare".

The study summarized its findings in these terms:

> The results of this study indicate that enterprise zones are no "miracle cure" or panacea for economic distress, but that notable improvements have occurred in very many zones. More than a quarter of the zones for which we have information achieved gross job gain growth rates that were higher than the national rate over comparable time periods. These gains occurred in what are typically very distressed areas, reflecting levels of unemployment, poverty, and economic and demographic stagnation that are far worse than either their host community or the nation. Like any program, there is a limited set of high performance zones and a multitude that have achieved far less success.
>
> The typical zone experienced the additional investment of several new and expanding businesses, although not unexpectedly, less success was registered in staving off planned closures and contractions. These new investments resulted in a median of 175 and an average of over 460 jobs gained per zone between the time of designation and survey response. The investment per job figures indicate that [fears of a] labor-intensive "sweatshop" environment ... are unfounded. Of considerable importance is our finding that zone area residents held a majority of these jobs gained, and that unemployed and low-income workers also received substantial shares ...
>
> Overall, the results of our study indicate that a significant number of state-sponsored enterprise zones have achieved notable successes in revitalizing some of their economically distressed areas. Whether the zones actually caused these gains is open to argument, although considerable evidence, both quantitative and qualitative, points to a significant marginal and catalytic role played by the programs.

An important finding of the study was that the zones that did best, while distressed, typically had "development potential." The study said that "identifying those areas that retain this potential without turning enterprise zones into a self-aggrandizing program is a critical balance point."

A narrower study of three enterprise zones in the state of Maryland by the General Accounting Office found that employment increased in the zones but that "factors other than the program seemed to account for these increases." The GAO made several qualifications to its findings, however. The report concluded:

> The factors most amenable to government intervention may not be the most commonly decisive in business locations. Employers are less likely to cite regulatory practices, taxes, financial inducements, and government-sponsored technical assistance as important than factors such as market access and community and site characteristics. Most enterprise zone incentives being in the form of financial inducements may explain the lack of employment growth attributable to Maryland enterprise zones.
>
> However, the employers surveyed reported that such financial inducements may influence hiring and investment decisions. This could mean that employers use the incentives after their businesses are located within the enterprise zone ... If this explanation is correct, actions could be taken—such as better publicizing the enterprise zone program to businesses outside the area or strengthening enterprise zone incentives—that could possibly increase the effect of an enterprise zone program. Employers apparently viewed some proposed federal tax incentives as potentially influential in their business decisionmaking.

Barry M. Rubin and Margaret G. Wilder, in a study published in the APA Journal in 1989, developed a "disaggregated analysis" method to deal with the problem raised by the GAO report—a problem inherent in evaluating enterprise zones. Numerous factors bear upon location of a business. How can one tell how much difference the enterprise zone incentives made, compared to other factors?

Rubin and Wilder chose the Evansville, Indiana zone in the 1983–86 period for their study, which sought to factor out such elements as "external growth stimuli and industrial composition" in evaluating the success of the zone. The method was designated "shift-share analysis." The study found:

> The results of the shift-share and the cost analysis point to two major conclusions. First, there is a substantial growth in employment in the Evansville enterprise zone that is due neither to metropolitan area growth nor to the industrial composition of the zone, but is instead a function of the comparative advantage of the area that comprises the zone. Given that the zone's geographic area was more distressed than the Evansville metropolitan area in the past years, and that the zone area gave no sign of having operable competitive advantages in the two decades prior to zone designation, it is plausible to infer that a large majority of the growth in employment is due to the effects of the enterprise zone and the zone association. Designation and operation of the zone is the only major economic change in the area that occurred in this time frame.

In more detail, the study found that of the 1,878 full-time jobs created in the Evansville zone in the 1983–86 period, 325 resulted from "the general growth of the Evansville Metropolitan Area", 123 came from the industrial composition of the area, and the remainder, or 1,430 jobs, was due to the enterprise zone incentives.

Another major finding of the study is that the program "is cost-effective in job generation" and "has shown lower cost-per-job levels than most public sector economic development programs."

However, the study also concluded that Indiana's particular tax incentive program, a chief feature of which is a credit against local property taxes equal to the tax on inventories for businesses in enterprise zones, may not be well designed for direct job creation. It said that "there appears to be no relationship between the size of the fiscal incentives claimed by a [business] sector and the extent of job generation in that sector," though the fiscal incentives "contribute to job generation in an indirect manner".

Evaluations of State enterprise zone programs will undoubtedly continue to be made. However, there appears to be enough evidence at hand to show that these programs produce measurable results. Addition of Federal tax incentives should multiply those results, at modest cost to the U.S. Treasury.

OTHER AREAS

Beyond the promotion of choice in education and enterprise zones, there are numerous other fields of governmental action where Federal policy encourages innovation and experimentation at the State and local level. What follows are examples in several areas.

Transportation

The Administration's proposal for a five-year reauthorization of the Federal highway program contains several innovations designed to encourage the States to seek their own solutions for local transportation problems, using both road building and mass transit.

- States will be allowed to use part of their annual highway funding grants for either highway or transit projects.
- Except for a newly designated National Highway System (which includes the 43,000-mile Interstate sytem), the present highway funding categories will be eliminated and States will have flexibility to use Federal highway funds on most non-local roads.
- In a change from current law, States will be allowed to use Federal highway funds to build, expand or improve toll roads. The Federal contribution would be 35 percent. Tolls could continue after the construction is paid for, provided the excess revenues are used for highway or mass transit capital projects.

More flexibility for State and local governments is not limited to surface transportation. In reauthorizing aviation programs last year Congress accepted an Administration proposal to change previous law and permit local airport authorities to levy passenger facility charges (PFC). These fees, of up to $3 per trip, will help the local authorities to finance airport expansion and improvement, including bond financing backed by the revenues from the fees.

Welfare

The Low Income Opportunity Board was an interagency body established in the Reagan Administration (now replaced by the Economic Empowerment Task Force). One of its principal functions has been to screen applications from the States for waivers from ordinary regulations and constraints to permit experimentation in the general area of welfare, including aid to families with dependent children (AFDC), food stamps and medicaid. All of the experiments contain a requirement for thorough evaluation of the results—evaluations that will be be forthcoming in the period from 1991 to 1995. The following is a brief description of several of the experiments which have been approved by the Low Income Opportunity Board.

- *Alabama.*—A single cash benefit replaces the currently separate AFDC, food stamp and low income energy assistance grants. This will test, in particular, the gains and losses from giving food assistance in cash instead of in stamps that are redeemable only in participating food stores.
- *Maryland.*—Incentive bonuses are offered to teenage parent AFDC recipients to stay in school and to long-term AFDC recipients to participate in training.
- *New York.*—In several counties, the AFDC program has been replaced for some families with a demonstration program guaranteeing child support payments to single custodial parents.
- *Texas.*—The State is testing the impact of transitional medicaid benefits to welfare parents who find work.

Not only does the Administration respond to requests from the States for waivers from the normal rules, it also solicits such requests. States willing to experiment in the welfare area on a budget-neutral basis would find sympathetic consideration for such concepts as these:

- Pay higher benefits to families who view AFDC as a short-term safety net and seek to get off welfare as soon as possible, and lower benefits to those who have made welfare a way of life. Benefits might be increased from present levels for newcomers on AFDC but gradually reduced after several years.
- Modify Federal matching rates (which now average a little over half of the benefits paid) in such a way as to give States financial rewards if they reduced long-term dependency.

In addition, the Administration will seek a new approach to the problems of poverty by encouraging establishment of "Empowerment Opportunity Areas". These would be in two forms—geographic concentrations of poor people, such as a central city or a rural area, or target groups such as unmarried first-time mothers. Special waivers from Federal requirements would be granted to encourage innovative approaches.

The plans to establish Empowerment Opportunity Areas would be developed locally and submitted to the Federal government for approval of the necessary waivers. The programs would have specific performance criteria by which they could be evaluated and would normally last for a period of three to five years. One of the conditions for approval of each proposal would be the willingness of State and local governments to participate.

Environment

The major Clean Air legislation approved by Congress and signed by the President in 1990 featured the market-based principle of "trading" in pollution reduction to foster the most efficient achievement of the specified reductions in air pollutants such as sulphur dioxide. The question arises whether this principle can be applied to the goal of preserving wetlands without completely halting local economic growth and development.

The Army Corps of Engineers plans demonstration projects in the States to help find the answer. "Wetlands mitigation banks" would be established which would accept "deposits" in the form of wetlands restored or created to offset "withdrawals" in the form of development projects that cause some loss of wetlands. These banks would be linked to State wetlands comprehensive plans.

VI.B. REPORTING ON VARIATION AND INNOVATION

NATURAL EXPERIMENTS IN HEALTH CARE: STATES AS LABORATORIES

The U.S. faces two major health care problems: cost and access. Per capita health spending is the highest in the world—$2,192 in 1988—and is increasing rapidly. Total U.S. health spending could increase from 11.6 percent of GNP in 1989 to 15 percent by the year 2000. There are clear benefits to this spending: life expectancy in the U.S. is among the longest in the world and most Americans have ready access to state-of-the-art medical care. However, many experts believe that quality can be maintained, or even improved, at a lower cost. If so, excessive health spending could be diverting resources needed for other investments in the Nation's future.

Rising costs also threaten access to care. Thirty-one million Americans—13 percent of the population—are uninsured, primarily because of cost. There is widespread concern that the uninsured may not be receiving necessary medical care and may be in poorer health as a result. Providing uncompensated care to the uninsured also results in a heavy financial burden for some hospitals, particularly inner city hospitals. Most of the uninsured are poor or near poor and cannot afford to buy insurance on their own. Many are employed (or are the dependants of workers), but most uninsured workers are low-wage, low-skill workers who cannot command health insurance as a fringe benefit. Two-thirds of the working uninsured are employed by small businesses—a segment of the economy that is facing special problems with insurance coverage.

State and local governments and private sector employers and health plans have developed and are testing a wide variety of innovative responses to the cost and access problems. It would be difficult to provide a complete catalogue. Literally hundreds of initiatives are underway across the country. However, the basic strategies being tested can be categorized in broad terms. State initiatives can generally be classified as market-oriented or regulatory in nature. Private sector initiatives are, of necessity, market-oriented. While there has been little formal evaluation, selected examples can provide valuable insights.

Controlling Health Care Costs

Market-oriented measures to control cost generally rely on selective contracting with providers to obtain discounts and on "managed care" to prevent unnecessary utilization. Regulatory approaches typically involve some form of regulation of payments by all private and public insurers to hospitals and other providers, although other regulatory approaches have been tried as well.

Selective Contracting in California.—Until 1982, California administered its Medicaid program in a traditional manner. Medicaid beneficiaries could obtain treatment from any hospital or physician willing to treat Medicaid patients. In this context, market-based pricing is not possible, so payment rates were set administratively by State officials. In 1982, California established selective contracting as a pro-competitive reform.

The theory is to use market forces to control costs. Under the program, Medicaid establishes exclusive provider agreements with a limited number of hospitals. Hospitals with exclusive provider contracts provide discounts to the State in exchange for an increased share of the Medicaid case load. Only those hospitals with agreements are entitled to provide elective non-emergency treatment to Medicaid recipients.

According to a 1986 evaluation funded by the Health Care Financing Administration, average per diem costs for inpatient hospital care were reduced by 16 percent as a result of the program. More recent estimates indicate savings of approximately $300 million per year. After a stormy beginning, providers are now generally satisfied with the program. While the program remains successful, political pressure has forced California to enter into contracts with more and more hospitals. Some believe that this has diluted the potential advantage to be gained by selective contracting.

The "Buy Right" Strategy: Cleveland Health Quality Choice.—In response to soaring costs, many employers (and insurers) have tried to obtain discounts from hospitals and physicians through "preferred provider" arrangements, a looser form of selective contracting than that used in the California Medicaid program. The health plan negotiates discounts with "preferred" hospitals and physicians, but patients retain choice. They still can receive care from non-preferred providers, but must pay higher cost-sharing. Care from "preferred providers" is free or subject to reduced cost-sharing.

While preferred provider arrangements are increasingly common, potential savings are limited by employee demands that a broader range of providers be included in the preferred provider network. Employees have little incentive to support restrictive networks, in part because they generally receive health insurance at nominal cost as a tax-free fringe benefit. In addition, employees are naturally concerned about quality of care.

To encourage greater employee support for selective contracting and to improve quality, a group of major employers in Cleveland, Ohio is sponsoring the Cleveland Health Quality Choice (CHQC) project. CHQC is developing a state-of-the-art system for measuring and comparing the quality of care in Cleveland-area hospitals. The system will include a survey to measure perceptions of quality from the patient's standpoint and a system for measuring quality from a clinical standpoint. Patient outcomes (e.g., death and complications) in hospital intensive care units and for selected medical and surgical admissions will be monitored with detailed clinical adjustments to account for differences in severity of illness.

CHQC hopes to be producing quality reports on a routine basis starting in 1992. CHQC expects that participating employers would use this information to guide their health purchasing decisions. Employers would share this information with their employees, and could adjust employee co-payments, to encourage use of the selected providers. It will be several years before the impact of the program can be assessed.

The Cleveland group must overcome many hurdles. However, use of outcomes data to compare quality appears to be just a matter of time. Many experts believe that outcomes data could be widely available within ten years. One of the basic weaknesses in the market for health care is that individual and institutional purchasers of care have little ability to evaluate quality. In the absence of reliable information, consumers are apt to equate higher price, fancier facilities, or reputation with better care. Thus, widespread consumer availability and use of quality data is likely to lead to more informed decision-making. Competition among providers to attract these more-informed consumers would be strengthened, potentially leading to better care at lower cost.

Using Managed Care in the Private Sector: Allied-Signal Corporation.—Many corporations offer their employees a wide variety of health plans. Allied-Signal, a New Jersey based technology firm, is trying a different approach. In 1988, Allied Signal shifted all of its health insurance business to CIGNA Corporation. This gave Allied Signal leverage to obtain a number of important concessions from CIGNA, including a highly unusual three-year rate guarantee. CIGNA, in turn, established a nationwide point-of-service managed care network to help control costs.

Under the point-of-service approach, patients can receive care from network providers or can receive care out-of-plan. As with preferred provider arrangements, use of network providers is encouraged by differential cost sharing. This incentive works: over 80 percent of the care received by Allied Signal employees is provided in-plan.

CIGNA's point-of-service plan differs from the typical preferred provider network in its extensive use of managed care to control utilization. The cornerstone of this strategy is the primary care "case manager" physician. Every employee has a primary care physician. These physicians are paid a fixed monthly fee for each patient and are responsible for providing routine primary care. Because payment is fixed, these physicians are not subject to the "do more, earn more" incentives of traditional fee-for-service payment. Referrals to specialists and hospitalizations must be authorized by the primary care physician. Unauthorized use is subject to higher cost-sharing. Further savings accrue due to discounts negotiated with specialists and hospitals in exchange for inclusion in CIGNA's network.

Allied estimates that it has saved more than $200 million over the three year contract period. Employees appear to be generally satisfied as well. It is too early to say whether favorable results can be sustained over a period of years. Nor is it certain whether Allied's success can be reproduced elsewhere. Nonetheless, the approach appears to be promising.

Using Managed Care to Control Medicaid Costs in Arizona.—Until 1982, Arizona was the only State that did not participate in Medicaid. County governments provided acute and long-term care for the poor. In 1982, Arizona established a Medicaid program and obtained a waiver to operate this through the Arizona Health Care Cost Containment System (AHCCCS).

AHCCCS is unique in that all care is provided through managed care arrangements. There is no fee-for-service option. Arizona contracts with participating health care organizations (HCOs) through a bidding/negotiation process. Modest savings have been achieved—estimated by HCFA at 5.7 percent in the fourth year of the program compared to fee-for-service alternatives.

Managed care is being used successfully in other Medicaid programs as well. Overall, 2.3 million Medicaid beneficiaries receive care through HMOs and other managed care plans.

Expanding Access by Limiting Covered Medical Services: The Oregon Experiment.—The Administration continues to monitor with great interest the Oregon Basic Health Services Act. As noted in the 1991 budget, this proposal expands greatly the State's Medicaid program to cover the entire State population whose incomes are below the poverty line with a "basic" package of medical services. Additional services will be provided only if funds are available. The program also requires that all workers in the State receive at least this same "basic" coverage through employment-based health insurance.

To assist in designing the basic benefit package, health care services are to be ranked by a Health Care Services Commission on the basis of their effectiveness in improving health. The Commission's initial report is expected to be completed in early 1991 and the design of the benefit package finished in the summer of 1991.

The Oregon plan will require a Federal waiver of the normal Medicaid rules, either administrative or statutory. It is controversial. Among other things, questions arise whether it will be as cost-neutral as it purports to be. But it clearly breaks new ground in seeking to deal with a major problem.

Controlling Costs Through Rate Regulation: Maryland, New Jersey, and New York.—For more than a decade, Maryland, New Jersey, and New York have regulated hospital payments to control costs. Health plans are not free to set their own payment rates or negotiate discounts. Maryland and New Jersey have "all payer" systems that set rates for private- and public-sector insurers. New York controls rates for all payers except Medicare. The Maryland and New Jersey systems are administered by a rate setting commission. The New York system is administered by the State Department of Health.

The three States have had some success in controlling costs, but each has also encountered problems. Maryland data suggest that cost per hospital admission is growing more slowly in Maryland than in the U.S. as a whole. However, recently Medicare costs seem to be increasing more rapidly under Maryland's all-payer system than they would increase under Medicare's own prospective payment system. There have been no rigorous studies of the impact of rate setting on quality. Ideally, rate-setting should be compared with market-based approaches, such as selective contracting, but such a study has not been conducted.

New York is considering a proposal that borrows some elements of the Canadian health system while retaining a mixed public and private system. Under the UNY*Care proposal, payment rates for hospital, physician, and other health services would be controlled to keep aggregate outlays within an acceptable range. To reduce administrative costs, the

State would operate a single claims processing and payment system for all private and public programs. Private insurers would continue to provide coverage to individuals not eligible for public programs, but their role would change dramatically; they would focus on efforts to prevent overutilization. UNY*Care would also provide universal health coverage through an expansion of Medicaid and an employer mandate.

The regulatory strategy reflects an underlying assumption that there are fundamental flaws in the market for health care. Commonly cited problems include insurance which weakens incentives for consumers to be prudent purchasers of care and the technical nature of health care which limits the ability of consumers to make intelligent health purchasing decisions. Advocates of regulation play down the possibility that selective contracting, managed care, and other market reforms can correct these problems.

Regulation is, of course, accompanied by its own set of potential problems. If prices are set too low (or if investments are controlled), shortages can develop with accompanying long delays in receiving care. There is some evidence this has happened in Canada. Moreover, price regulation is an inherently political process; thus, its effectiveness in controlling costs is contingent on the politics of the day.

Expanding Access to Health Insurance

Market-oriented efforts to expand access often attempt to make insurance more affordable through premium subsidies or through low-cost minimum benefit packages. Regulatory measures, by contrast, typically involve a mandate, or a special tax, to force employers to provide health insurance as a fringe benefit to workers. Other approaches focus on the special problems of small business.

Reducing Premium Costs to Encourage Voluntary Coverage: The Washington State Basic Health Plan.—In 1989 Washington State implemented its "Basic Health Plan" with the goal of universal coverage. The approach is voluntary; there are no mandates. To encourage enrollment, costs are held as low as possible through use of managed care. To reduce costs further, prescription drugs, dental, mental health, and custodial care were excluded from coverage even though these services can be important for many low-income residents. In addition, premiums are subsidized on a sliding scale basis. Individuals with incomes below 100 percent of poverty pay less than 15 percent of cost while those with incomes between 175 and 200 percent of poverty pay 75 percent of cost.

Currently the program is available to individuals and families with incomes below 200 percent of poverty in 17 locations throughout the State. Almost 19,000 residents are enrolled; total enrollment is capped at 30,000 because of limited funding. While the plan has had some success, it falls far short of providing universal access. The problem is clear: premium subsidies cost $900 to $1000 a year per enrollee. With approximately 800,000 uninsured residents, universal coverage could cost Washington State almost a billion dollars a year. And costs could be even higher if the availability of generous premium subsidies encouraged employers to cut back on the premium contributions they currently make for low-wage workers.

Requiring Employers to Provide Health Insurance Coverage: Hawaii and Massachusetts.—In contrast to Washington's voluntary approach, Hawaii and Massachusetts are using mandates to expand health coverage. Hawaii's program has been in effect since 1974. The Massachusetts plan has not yet been implemented.

Under the Hawaii law, employers are required to provide coverage that meets or exceeds a State-defined package of benefits. Until recently employer liability was limited to 1.5 percent of gross revenue. Starting in 1992, Massachusetts employers will be required to pay a "play-or-pay" tax of $1,680 per worker; the tax will be waived for employers who are providing an equivalent amount of health insurance.

As a result of its mandate fewer than 5 percent of the Hawaii population are uninsured—the lowest percent in the nation. Low-income school children and unemployed workers comprise most of the remaining uninsured. There have been few obvious negative consequences. The future of the Massachusetts plan is uncertain, particularly because of the State's economic problems.

Mandating health benefits expands coverage at little or no direct cost to government. However, costly mandates will reduce employment opportunities and cash wages for low-income workers. If so, the intended beneficiaries could be hurt more than they are helped. Because of Hawaii's unique geography and economy, the ability to draw lessons applicable to other States is unclear; for example, there is evidence that because of a very tight labor market employers offer health plans that cost more than the mandated floor amount in order to attract workers.

Funding Uncompensated Care Through a Hospital Tax: New Jersey.—New Jersey relies on an approach that focuses on expanding access to hospital care. A special tax, or surcharge, is imposed on all hospital bills. This raises revenues that are then recycled to those hospitals (about one third of the total) that provide a disproportionate amount of uncompensated care. In 1990, the tax was about 19 percent and raised more than $600 million in revenues.

From an access perspective, the New Jersey program has a number of clear benefits. Access for the uninsured is improved and New Jersey hospitals, particularly inner city hospitals, have been spared many of the uncompensated care problems afflicting hospitals elsewhere. Moreover, the New Jersey system helps level the playing field between hospitals with differing indigent care burdens. This can be very important in an increasingly competitive environment.

However, there are problems. The burden of the hospital tax is ultimately born by those employers that voluntarily provide coverage to their workers. A further problem is that even the current tax is insufficient to cover indigent care costs fully. Finally, the system provides no assistance for ambulatory care which could, in some situations, prevent the need for a more costly hospital admission.

Because of these concerns, a "Governor's Commission on Health Care Costs" has recently recommended elimination of the hospital tax in favor of a broad-based payroll tax and a Massachusetts-style "play-or-pay" tax of $1000 per employee.

Using Regulation to Make Health Insurance More Available For Small Business: The Connecticut Plan.—Small business plays a central role in the problem of the uninsured. Two-thirds of all uninsured workers are employed by small business. In part, this reflects the general economics of small business, but small firms also face a number of unique problems with health insurance. Aggressive insurers are "skimming the cream" by offering low, experience-rated premiums to small businesses with healthy workers. As this happens, premiums for other firms increase rapidly. Because these firms are too small for effective risk pooling, premiums can increase dramatically with even a single high-risk employee. Whole firms are being denied coverage because of a single employee with a chronic illness. There are other problems as well. Overhead costs are high: up to 40 percent of benefit payments for firms with fewer than 5 employees, compared with 6 percent for firms with more than 10,000 employees. Moreover, small firms do not have the leverage needed to command discounts from insurers.

Connecticut is addressing these problems with a 1990 law focused on small business. Premium setting and underwriting practices are regulated to prevent "cream-skimming" and "churning." Insurers would be prohibited from denying or cancelling coverage based on health status and there would be limits on the extent to which premiums could be varied based on health status or claims experience. The bill also provides for the creation of a risk pool to spread the cost of providing coverage to high risk groups. Finally, the law provides for a new low-cost minimum benefit package available for small employers who are not currently providing health insurance.

It is too early to assess the impact of this initiative, but Connecticut's approach is gaining momentum. The National Association of Insurance Commissioners and the Health Insurance Association of America are supporting similar legislation for enactment by State legislatures across the country. However, some observers question whether chronically understaffed insurance regulators will be able to enforce adequately the complex provisions involved. Moreover, insurance will remain too costly for many, so the overall impact on the uninsured is unlikely to be as large as hoped.

Pooling the Purchasing Power of Small Employers: The COSE Program.—Cleveland's "Council of Smaller Enterprises" (COSE) is tackling the health insurance problems faced by small business through a purely private sector approach. Rather than relying on government regulation of underwriting and premium-setting practices, COSE is using the pooled purchasing power of many small businesses to get the best value for its membership.

COSE is not an insurer; it does not provide insurance coverage directly. Rather, COSE is a group purchasing service that buys health insurance for its membership. COSE provides members with 10 plan options including preferred provider organization (PPO) and health maintenance organization (HMO) options.

COSE is governed by a board of directors that is elected by the membership and has a full-time professional staff dedicated to mastering the intricacies of health insurance. To reduce administrative costs, COSE administers billing and enrollment functions directly. This has also allowed COSE to develop an information system that it uses to support its aggressive purchasing efforts. These advantages are unavailable to small businesses acting independently.

COSE's success can be measured by its enrollment growth. Since 1978, COSE has grown from 80 member companies with approximately a thousand covered employees and dependants to over 6,250 member companies with over 125,000 covered employees and dependants. The premiums paid by members and enrollees total more than $100 million a year.

Because of its size, COSE can obtain substantial discounts from insurers and negotiate rules of conduct to prevent problems and misunderstandings. According to an independent consultant, premium rates for COSE increased by only 35 percent between 1984 and 1990 compared with a 150 percent increase for commercial insurance rates during the same period.

COSE clearly has made a real difference for the employees and families of its member companies. But COSE's strategy has its limits. Health insurance is still very expensive. Moreover, COSE operates in a highly competitive environment and must, therefore, hold down premium costs to attract members. As a result, COSE limits coverage for high risk groups and individuals with pre-existing conditions. Moreover, COSE charges modestly higher premiums for small businesses with an adverse claims history. Nonetheless, members have been protected from many of the underwriting practices afflicting small business health insurance elsewhere.

OTHER AREAS

Spontaneous State and local experimentation, without explicit Federal sponsorship or financing, is occurring in numerous areas of governmental policy and action, apart from the innovations in health care described above. In education alone, for example, nearly every State is trying out new ideas in an effort to reverse the acknowledged weaknesses in student achievement in the public schools. An experiment with Federal support, educational choice, is described in the preceding section.

Selected examples of State experimentation are outlined below to illustrate the diversity.

Solid Waste

Collier County, Florida, has adopted a process called "landfill mining", which involves digging up old landfills and sorting the trash by machine into several types. Some recyclable materials, such as ferrous scrap, plastics and glass, are sold. Organic material is composted. The county gains revenues and reduces the threat to ground water posed by landfills.

Water Supply

The East coast of southern Florida has numerous golf courses, which need to be watered, and a limited supply of fresh water. Palm Beach and Martin counties, which are adjacent, treat waste water from a community of 50,000 to sufficient purity to be usable for golf course watering. The treated water is sold to the golf courses, saving 500,000 gallons daily of drinking water and earning revenues to pay for the waste water treatment.

Rail Transportation

The State of California has been able to sell transportation bonds based on a recent increase in highway user fees. Part of the proceeds of the bond issues will be used, not for road building, but rather to reduce highway congestion by improving intercity rail passenger transportation within the State.

Welfare Payments

Ramsey County, Minnesota, is conducting an experiment in which more than $4.5 million each month in various kinds of cash welfare benefits are paid to more than 11,000 recipients through Automated Teller Machines and Point-of-Service terminals. No checks are issued. Recipients avoid check-cashing fees and can, in effect, open a bank account and withdraw their benefits in small amounts during the month rather than all at once. The demonstration will provide information on the costs of electronic benefit disbursement, which may exceed those of standard benefit issuance, and the costs can then be weighed against the advantages of the new system.

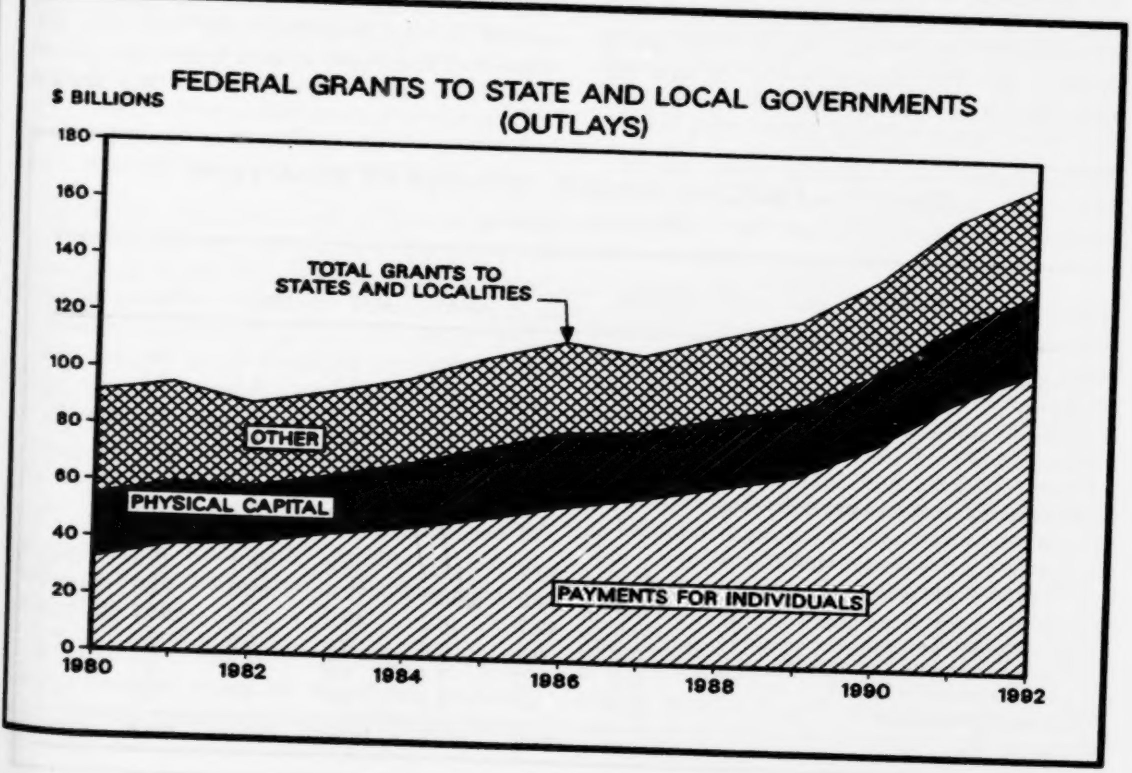
VI.C. PROVIDING FEDERAL AID TO STATE AND LOCAL GOVERNMENTS[1]

State and local governments have a vital constitutional role in providing government services. They have the major role in providing domestic public services, such as public education, law enforcement, public roads, water supply, and sewage treatment. The Federal Government contributes directly toward that role both by promoting a healthy economy and by providing grants, loans, and tax subsidies to State and local governments.

Federal grants help State and local governments finance programs covering most areas of domestic public spending, including income support, capital spending, and other assistance. Federal grant outlays were $136.9 billion in 1990. They are estimated to be $158.6 billion in 1991 and $171.0 billion in 1992.

The accompanying chart shows trends in outlays in major grant categories from 1980 to 1992. Grant outlays for payments for individuals are estimated to be 62 percent of total grants by 1992; for physical capital, 16 percent; and for all other grants, largely for education, training, and social services, 22 percent.

In addition, Federal direct lending and loan guarantees to State and local governments are another source of Federal aid. Federal loans are used by States and localities for a variety purposes, including rural development and transportation. Direct loan disbursements to State and local governments are estimated to



---

[1] Federal aid to State and local governments is defined as the provision of resources by the Federal Government to support a State or local program of governmental service to the public. The three primary forms of aid are grants (including shared revenues), loans, and tax expenditures.

be $581 million in 1992, compared to $521 million in 1991. New guaranteed loans are estimated to be $125 million in 1992, compared to $110 million in 1991. Information on new credit reform concepts and other Federal credit activities is available in Chapter VIII.A., "Recognizing and Reducing Federal Underwriting Risks" in this volume.

Federal aid to State and local governments is also provided through tax expenditures. Tax expenditures are one of the means by which the Federal Government carries out public policy objectives; they can be considered alternatives to direct spending programs.

The two major tax expenditures benefiting State and local governments are the deductibility of most State and local taxes and the exclusion of interest on State and local securities from Federal taxation. Federal aid to State and local governments through tax expenditures is estimated to be $57.8 billion in 1992 compared to $55.4 billion in 1991.

A detailed discussion of the measurement and definition of tax expenditures and a complete list of revenue loss and outlay equivalent estimates for specific tax expenditures are in Chapter XI, "Tax Expenditures," in this volume. State and local tax expenditures are displayed separately at the end of Table XI–1 in that chapter.

FEDERAL GRANTS BY FUNCTION AND AGENCY

Table C–1 shows a functional distribution of Federal grant outlays as proposed in this Budget. The functions with the largest amount of grants are health and income security, with combined estimated grant outlays of $109.8 billion or 64 percent of total grant outlays in 1992.

Table C–2 shows the distribution of grants by agency. Grant outlays for the Department of Health and Human Services are estimated to be $90.3 billion in 1992, 53 percent of total grants, much more than any other agency.

HISTORICAL PERSPECTIVES

In recent decades, Federal aid to State and local governments has become a major factor in the financing of certain government functions. The rudiments of the present system date back to the Civil War. The Morrill Act, passed in 1862, established the land grant colleges and instituted certain federally required standards, as is characteristic of the present

grant system. Federal aid was later initiated for agriculture, highways, vocational education and rehabilitation, forestry, and public health. In the depression years, Federal aid was extended to meet income security and other social welfare needs. However, Federal grants did not become a significant factor in Government expenditures until after World War II.

Table C–3 displays trends in Federal grants to State and local governments. Section A of Table C–3 shows the percent distribution of Federal grants by function. Functions with a substantial amount of grants are shown separately. Grants in the functions for national defense, energy, veterans benefits and services, and the administration of justice are relatively small and are combined in the "other functions" line in the table.

The percent for transportation increased to 43 percent in 1960 with initiation of aid to States to build the Interstate Highway System in the late 1950s.

By 1970 there had been significant increases in the relative share for education, training, employment, social services, and health (largely medicaid).

In the early and mid-1970s, major new grants were created for natural resources and environment (construction of sewage treatment plants), community and regional development (community development block grants), and general government (general revenue sharing).

In the 1980s changes in the relative shares reflect steady growth of grants for health (medicaid) and income security and restraint in most other areas.

Section B of Table C–3 shows the composition of grants divided into three major categories: payments for individuals, physical capital, and other grants. Grant outlays for payments for individuals have grown significantly as a percent of total grants. In 1980, they were 36 percent of the total, and by 1990 they had grown to 57 percent of the total. These grants go through State or local governments to provide cash or in-kind benefits that constitute income transfers to individuals or families. The major grant in this category is medicaid, which had outlays of $41.1 billion in 1990. Family support payments to States (AFDC), child nutrition programs, and housing assistance are also large grants in this category. All programs in this category are identified by footnote in

[1] For an identification of accounts in this category, see table C–4, including its footnote.

[2] Excludes capital grants that are included as payments for individuals.

[3] Excludes national defense, international affairs, net interest, and undistributed offsetting receipts.

N/A: Not available.

the detailed Table C–4, Federal Grants to State and Local Governments—Budget Authority and Outlays, at the end of this section.

Grants for physical capital are to assist States and localities with construction and other physical capital activities. The major grants in this area are for highways, but there are also grants for airports, mass transit, sewage treatment plant construction, community development, and other areas. Grants for physical capital were almost half of total grants in 1960, shortly after initiation of grants for construction of the Interstate Highway System. The relative share of these outlays has declined somewhat steadily, as payments for individuals and other social programs have grown since the mid-1960s. In 1990, grants for physical capital were 19 percent of total grants.

The other grants are primarily for education, training, employment, and social services. These grants increased to 34 percent of total grants by 1970. In 1990 these grants were 24 percent of total grants.

Section B of Table C–3 also shows these three categories in constant dollars. In constant FY 1982 dollars, total grants decreased from $105.9 billion in 1980 to $100.9 billion in 1990, an average annual decrease of 0.5 percent. From 1980 to 1990, payments for individuals grew from $38.2 billion to $57.8 billion, an average annual increase of 4.2 percent; grants for physical capital decreased from $24.5 billion to $20.9 billion, an average annual decrease of 1.6 percent, and other grants decreased from $43.2 billion to $22.2 billion, an average annual decrease of 6.4 percent.

Section C of Table C–3 shows grants as a percent of Federal outlays, state and local expenditures, and gross national product. Grants have declined as a percent of total outlays from 15 percent in 1980 to 11 percent in 1990 and, as a percent of domestic programs, from 22 percent in 1980 to 17 percent in 1990.

As a percent of total State and local expenditures, grants have declined from 26 percent in 1980 to 18 percent in 1990.

Section D of Table C–3 shows the relative contribution of physical capital grants in assisting States and localities with capital spending. Federal capital grants declined as a percent of State and local capital spending from 36 percent in 1980 to 23 percent in 1990, reflecting restraint in Federal spending and increased capital spending by States and localities financed from their own sources, such as taxes or borrowing.

OTHER INFORMATION ON FEDERAL AID TO STATE AND LOCAL GOVERNMENTS

Additional information regarding aid to State and local governments can be found in other parts in this budget.

- Discussions of major policy proposals, many of which affect aid to State and local governments, can be found throughout Part Two.
- Presentation of major public physical capital investment programs that are grants to State and local governments can be found in Chapter XVIII, "Physical Capital Presentation."
- Data for summary and detailed grants to State and local governments can be found in many sections of Part Seven, "Historical Tables." Section 12 is devoted exclusively to grants to State and local governments. Additional information on grants can be found in Section 6 (Composition of Federal Government Outlays); Section 9 (Federal Government Outlays for Major Public Physical Capital Investment); Section 11 (Federal Government Payments for Individuals); and Section 15 (Total (Federal and State and Local) Government Finances).

In addition to the data in this budget, a number of other sources of information are available that use slightly different concepts of grants, provide State-by-State information, or provide information on how to apply for Federal aid.

- *Governmental Finances,* published annually by the Bureau of the Census in the Department of Commerce, provides data on public finances, including Federal aid to State and local governments.
- The *Survey of Current Business,* published monthly by the Bureau of Economic Analysis in the Department of Commerce, provides data on the national income and product accounts (NIPA), a broader statistical concept encompassing the entire economy. These accounts include data on Federal grants to State and local governments. Data using the NIPA concepts appear in this budget in Chapter XVI, "National Income and Product Account Presentation."
- *Budget Information for the States (BIS)* provides estimates of State funding allocations for the largest formula grant programs for the past, present, and budget year. These programs comprise approximately 80 percent of total Federal aid to State and local governments. The document is prepared by the Office of Management and Budget soon after the Budget is released.
- *Federal Expenditures by State* is a report prepared by the Bureau of the Census that

shows Federal spending by State for grants and other spending for the most recently completed fiscal year.

- The *Consolidated Federal Funds Report* (*CFFR*) is two annual documents that show the distribution of Federal spending by county areas and by local governmental jurisdictions. It is released by the Bureau of the Census in the Spring.
- The Federal Assistance Awards Data System (FAADS) provides computerized information about current grant funding. Data on all direct assistance awards are provided quarterly by the Bureau of the Census to the States and to the Congress.
- The *Catalog of Federal Domestic Assistance* is prepared by the General Services Administration with data collected by the Office of Management and Budget and is available from the Government Printing Office. The basic edition of the Catalog is usually published in June and an update is generally published in December. It contains a detailed listing of grant and other assistance programs; discussions of eligibility criteria, application procedures, and estimated obligations; and related information. This is a primary reference source for communities wishing to apply for grants and other domestic assistance.
- The *Federal Register* is published daily by the Government Printing Office and has current information on agencies that are accepting applications for specific programs. These notices also provide information on eligibility criteria and application procedures.

THE STATE AND LOCAL GOVERNMENT SECTOR OF THE NATIONAL INCOME AND PRODUCT ACCOUNTS

The national income and product accounts (NIPA) provide a comprehensive statistical description of the U.S. economy that includes State and local government receipts and expenditures. These data measure the relationship between the State and local governments as a sector of the economy and other sectors.

There are three major differences between NIPA data and a government's own budgetary accounting for receipts and expenditures. First, financial transactions are excluded from NIPA data but are generally included in budgetary data. Second, a large number of transactions in the NIPA accounts are recorded on an accrual basis, while many governments show transactions on a cash basis. Third, NIPA data aggregate total State and local transactions, whereas many governments separate their general fund from special funds. As a result of these differences, NIPA totals are not the same as an aggregate of these governments' budgets. However, the NIPA data do provide timely estimates of total State and local fiscal transactions not otherwise available and, if used with care, can provide helpful financial indicators.

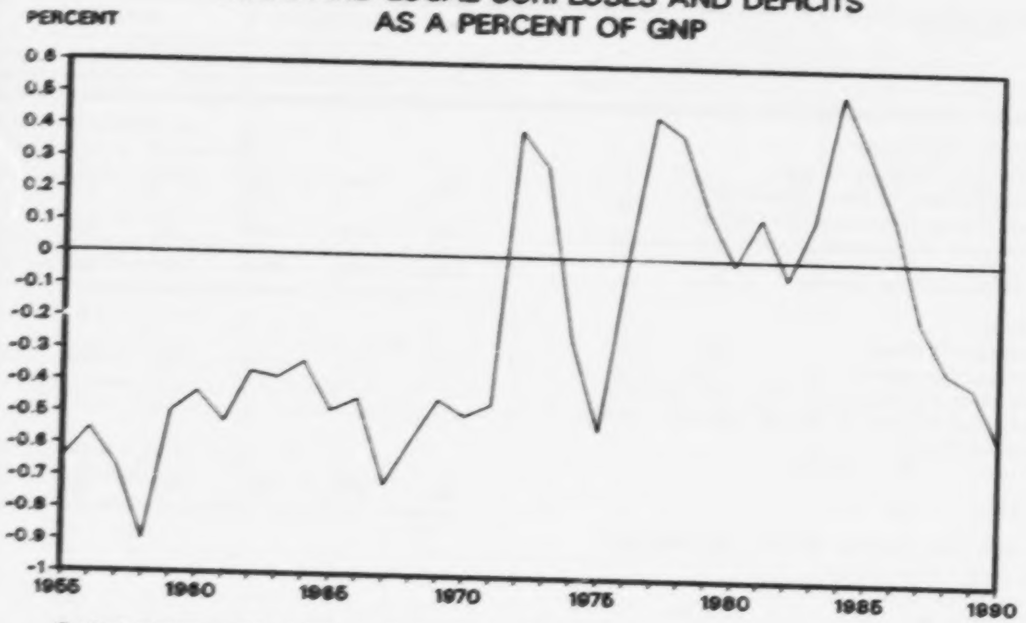
NIPA State and Local Sector.—The following chart shows State and local operating account surpluses and deficits as a percent of GNP, excluding the social insurance funds (primarily pensions). The social insurance funds have been excluded because their surpluses are for future pension obligations and are not available for carrying out the general responsibilities of these governments. It is reasonable for the operating account to be in deficit because it includes capital expenditures, often financed through borrowing. The peaks and troughs in the operating account are largely the result of:

- changes in economic activity, which affect primarily receipts;
- decisions regarding debt-financed capital spending; and
- changes in Federal aid.

The operating account was in deficit every year from 1955 to 1971. During the 1970s it was frequently in surplus. In part, this change reflected the growth of Federal grants (rather than State and local borrowing) to finance new infrastructure.

- The surpluses in the early 1970s were largely the result of the initiation of general revenue sharing and strong economic growth.
- The low point in 1975 was largely the result of the recession.
- The surpluses in the latter 1970s were largely the result of the economic recovery.

STATE AND LOCAL SURPLUSES AND DEFICITS AS A PERCENT OF GNP



Excludes state and local social insurance funds.

increases in anti-recession Federal grants, reductions in debt-financed capital spending, and general restraints in government spending exemplified by the passage of Proposition 13 in California in 1978.

The recession brought the account into deficit in 1980 and 1982, albeit quite small ones relative to the 1955–71 period. As a result of the recession, States and localities reduced expenditures and increased taxes. These actions along with economic growth helped return the account to surplus for 1983–1986. The decline into deficit beginning in 1987 is due to increases by States and localities in capital spending financed by borrowing and to other factors.

DETAILED FEDERAL AID TABLES

The following two tables present detailed Federal aid data for 1990, 1991, and 1992. Table C–4, "Federal Grants to State and Local Governments—Budget Authority and Outlays," provides detailed budget authority and outlay data for grants. Table C–5, "Credit Assistance to State and Local Governments," provides information on direct and guaranteed loans to State and local governments.

VII. PRESERVING NATIONAL SECURITY AND ADVANCING AMERICA'S INTERESTS ABROAD

VII. INTRODUCTION

The budget requests $290.8 billion in budget authority and $295.2 billion in outlays for National Defense (050), and $35.7 billion in budget authority and $17.8 billion in outlays for International Affairs (150) in 1992. These levels are consistent with the Budget Enforcement Act which provides separate caps for these functions in 1992 and 1993. The purpose of this request is to provide for programs that preserve the Nation's security—through diplomatic, political, and military means; through advancing the U.S. agenda on economic and trade issues; and through advancing the cause of democracy, human rights, international cooperation and the rule of law.

The defense budget request does not reflect the full incremental costs of Operation Desert Shield which includes Desert Storm. When costs can be more reliably determined, a supplemental request will be submitted formally. In the interim, Desert Shield placeholder amounts are included in Governmentwide allowances.

[1] Does not include $1.0 billion already appropriated by the Congress in 1991.

CONTEXT

The events of last year were both encouraging and disturbing. There was German unification, and rapid economic and political reform in Eastern Europe, but also deep uncertainty and instability within the Soviet Union. There was close cooperation among our allies in the Persian Gulf crisis, but disarray among them in trade negotiations resulting in the suspension of the Uruguay Round. There was a restoration of democracy in Panama and Nicaragua, but a setback for democracy in Suriname. There was a movement toward economic reform in Latin America as evidenced by U.S. and Mexican free trade negotiations and by the Enterprise for the Americans Initiative, but the persistence of trade restrictions in many countries. There were reduced military tensions with the Soviet Union but also the need for massive U.S. force deployments, the most rapid large-scale deployment since World War II. As this budget goes to press, war has begun.

Against this background, there are both opportunities for action and problems to be addressed. Because of the reduced threat of a major war with the Soviet Union, plans can proceed for a significant reduction in military force structure—of about 25 percent by 1995. But, as recent events in the Mideast show, necessary military capabilities must be maintained, and selectively strengthened and restructured to respond to regional conflicts and to outlaw and terrorist regimes. Moreover, force planning must take into account that the Soviet Union continues to possess formidable military power including massive strategic nuclear capabilities.

International affairs programs will reinforce the movement toward democracy and free markets and support efforts to protect new and existing democracies from threats to their security. This requires the full range of assistance tools, from development assistance to balance of payments support to military assistance. To tailor assistance to individual country situations and to be able to respond to unfolding events, flexibility must be an essential feature of assistance programs.

VII.A. PRESERVING NATIONAL SECURITY

The security objectives of the U.S. remain unchanged. U.S. military forces must deter aggression and protect American citizens around the globe. They must be able to repel or defeat military attacks that threaten vital U.S. interests. The reduced threat of a major war with the Soviet Union presents the opportunity to reduce and restructure military forces. Nevertheless, combat-ready forces must be maintained and equipped with modern equipment to respond to continuing threats. It is also in the U.S. interest to pursue verifiable strategic and conventional arms reduction agreements, to prevent the transfer of technologies with military applications to potential adversaries, and to continue to meet the challenge of reducing the flow of illegal drugs into the U.S.

NATIONAL DEFENSE BUDGET

Table A–1 shows the budget authority and outlays through 1993 for the three national defense subfunctions: military functions of the Department of Defense, atomic energy defense activities, and defense-related activities of other agencies.

Currently planned 1991–1995 defense budget levels are compared in Table A–2 with last January's budget and with the July 1990 Gramm-Rudman-Hollings baseline (no real growth). The table shows that the 1991–1995 levels are $130 billion in budget authority and $97 billion in outlays below last year's budget, and $238 billion in budget authority and $182 billion in outlays below the July Gramm-Rudman-Hollings baseline.

Department of Defense—Military

The budget requests $278.3 billion for budget authority and $283.0 billion for outlays in 1992 for the military functions of DOD. The 1992 program for Defense is 12 percent below the 1990 program in real terms, after inflation, and 24 percent below the 1985 level. The budget includes proposed rescissions of $3.4 billion in 1991, reflecting proposed program terminations in 1992 and elimination of low-priority

PRIORITIES

This year's budget reflects the following priorities.

IMPLEMENT ARMS CONTROL WHILE MAINTAINING STRATEGIC DETERRENCE

Operations

Strategic Forces.—Deployed forces will continue to form a triad of land-based, sea-based, and air offensive systems, and will also include air defense interceptors. Retirement of the Minuteman II force will begin in 1992; the Minuteman III and Peacekeeper missiles will be maintained. Retirements of submarines with the aging Poseidon (C–3) missile are to be accelerated. Over the course of the 1990s, the strategic submarine inventory will shrink from its current mix of 34 Poseidon and Trident boats to a force of 18 Trident submarines carrying Trident I (C–4) and Trident II (D–5) missiles. The total bomber force will decrease from 291 at the end of 1990 to 234 by the end of 1992, as B–52s are retired and FB–111s are transferred to the tactical force.

Investment

Strategic Retaliatory Systems.—Modernization of the three major components of strategic retaliatory forces will continue in 1992. The budget requests funds to procure four B–2 (Stealth) bombers and 115 Advanced Cruise Missiles. Development of the Small Intercontinental Ballistic Missile continues, and Rail-garrison Peacekeeper development will continue and provide a missile flight test. The budget requests funds for 28 D–5 missiles. No additional Trident submarines will be built beyond the 18th boat approved in the 1991 budget.

Strategic Defense: Global Protection Against Limited Strikes.—In 1992 the Strategic Defense Initiative (SDI) will be reoriented to reflect the changing nature of ballistic-missile threats emerging in the post-Cold War era. These threats arise primarily from two sources. First, proliferation of advanced technologies to hostile or unstable regimes could enable these states to acquire ballistic missiles of increasing range—possibly armed with nuclear, chemical, or biological weapons. Second, there is increased concern regarding the unauthorized or accidental launch of ballistic missiles. The objective of the new approach is to provide protection to U.S. territory, U.S. forces deployed abroad, and U.S. friends and allies from limited ballistic-missile strikes—whether accidental, unauthorized, or from a third country. Because this defensive concept stresses protection against ballistic missile threats irrespective of their source, it is called Global Protection Against Limited Strikes (GPALS). The objective of global protection could be met with a defensive system less than half the size of a system designed to achieve the earlier "Phase I" objective of deterring a massive Soviet attack. Also, GPALS would allow for significant budgetary savings (20 percent for the next six years compared to levels in the earlier plan). In 1992, $4.6 billion is requested for SDI.

Arms Control Implementation.—The budget request for the Department of Defense includes nearly $480 million in 1992 to prepare for and implement arms control agreements. These funds are needed to implement the Intermediate-range Nuclear Force (INF) and Nuclear Testing Treaties. Funds are also requested to support implementation of recently concluded agreements on Conventional Forces in Europe (CFE), and Chemical Weapons (CW), as well as the Strategic Arms Reduction (START) agreement which may be concluded in 1991. Activities to be funded include: on-site monitoring; escorting of foreign inspectors; destruction, modification, and relocation of military equipment; and research and development of implementation techniques. These figures do not include a separate, classified amount for intelligence activities related to arms control implementation.

ADAPT CONVENTIONAL FORCES TO 1990's THREATS

Operations

Military Personnel.—Personnel levels in both the active and reserve forces will decline as U.S. forces are reshaped for a changed security environment. Recent changes permit a smaller military, but one that continues to be highly trained and motivated. U.S. forces will have the versatility to respond rapidly to crises throughout the world. Active military end-strength will decline by 13 percent from 2,069,000 in 1990 to 1,795,000 in 1993. By 1996, force levels are projected to be 20 percent below 1990 levels. Reserve and Guard personnel levels will decline by 12 percent, from 1,128,000 in 1990 to 989,000 in 1993. By 1996, reserve forces are projected to be 20 percent below 1990 levels.

General Purpose Forces.—In adapting general purpose forces to the threats of the 1990s, force levels can be reduced by about 25 percent by 1995. Major changes in force structure proposed through 1993 are:

- *Land forces* at the end of 1993 will include 17 active (14 Army and 3 Marine) and 9 reserve (8 Army and 1 Marine) divisions. This reflects a reduction of 4 active divisions and 2 reserve divisions from force levels at the end of 1990.
- *Naval forces* at the end of 1993 will include 13 deployable carrier battle groups and 11 active carrier air wings (a reduction of 2 air wings from 1990 levels) and

two reserve wings. All four battleships, older attack submarines and amphibious warfare ships will be deactivated. The total number of naval vessels will decline from 545 at the end of 1990 to 464 at the end of 1993.

- *Air Forces* at the end of 1993 will include 16 active and 11 reserve Air Force fighter wing equivalents (about 3,300 total fighter and attack aircraft), 2 B–52 squadrons dedicated to the delivery of conventional weapons (about 40 total aircraft), and 28 strategic airlift squadrons (391 total C–5 and C–141 aircraft) to provide intercontinental airlift. This is a reduction of more than 8 fighter wing equivalents (active and reserve) from the 1990 level.

Investment

Conventional Systems.—The Army's major modernization program that began in the early 1980s is drawing to a close. However, development continues on the Light Helicopter, forward area air defense systems, and armored vehicles.

To provide essential near-term modernization of naval forces, the budget provides for procurement in 1992 of 1 SSN–21 nuclear-powered attack submarine, 5 Aegis radar-equipped destroyers, 36 F/A–18 fighters, and several types of tactical missiles. Development begins on an advanced version of the F/A–18 and continues on the Advanced Air-to-Air Missile.

Modernization of the tactical Air Force continues with procurement in 1992 of 48 F–16 fighters, 8 C–130 and 6 C–17 transport aircraft, and 1,000 Advanced Medium Range Air-to-Air Missiles. The next generation air superiority fighter—the Advanced Tactical Fighter—continues in development.

Several systems will be, or recently have been, terminated, with savings of $10 billion in 1992 compared with previously planned amounts. These terminations include the Navy version of the Advanced Tactical Fighter, the P-7 anti-submarine patrol aircraft, the F–14D remanufacturing program, the Lance follow-on missile, the Tacit Rainbow drone, the Bradley fighting vehicle, binary chemical munitions, the 155mm nuclear artillery round, and the A-12 aircraft (see Table B–2 in Chapter IX.B).

As a consequence of the decision to terminate the A–12 program for default, $0.5 billion of unobligated 1991 funds will be used to pursue development of medium attack aircraft alternatives. Funding is also included in the 1993 and outyear A–12/AX program line pending an evaluation of alternatives.

MAINTAIN A STRONG TECHNOLOGY BASE

For 1992, the budget proposes $3.9 billion in budget authority for technology-base programs (basic and applied research). This is an increase of $0.5 billion over the 1990 level. These programs provide options for future defense systems and help to avoid technological surprise from potential adversaries.

Funds are invested for work in computer science and electronics, biomedical sciences, geophysics, meteorology, chemistry, physics and engineering methods. Areas of emphasis within the technology base include parallel computers to increase dramatically computation speed and new materials for electronics, gas turbine engines and airframe components.

In addition to basic and applied research, the budget provides $2.2 billion in 1992 for demonstration of devices with potential military application. Examples are development of advanced electronics devices through SEMATECH, the industry semiconductor consortium, the integrated high performance turbine engine program, and the unmanned underseas vehicle program.

IMPROVE MANAGEMENT AND REDUCE OVERHEAD

Defense Management Report.—As a follow-on to the proposals in last year's Defense Management Report, additional management initiatives are being proposed in the 1992 budget. These new initiatives will result in savings of nearly $0.7 billion in 1992, growing to $2.9 billion by 1996 and reductions in civilian and military personnel of 8,600 and 19,000 respectively by 1997. These and last year's proposals are projected to save over $72 billion during the 1991–1997 period. These savings will help DOD to maintain needed military capabilities within constrained resources. Defense management reforms are included in the Management by Objectives Program.

The 1992 initiatives include functional consolidation and streamlining of activities such as supply depots, inventory control points, research and development laboratories, maintenance facilities, and finance and accounting operations. Efforts continuing from last year's management review include: improved management of logistics operations, especially supply and transportation systems; consolidation of contract administration functions; consolidation of commissary operations; reductions in consulting costs; and implementation of a corporate management information system.

The budget includes a proposal to create the Defense Business Operations Fund (DBOF), a revolving fund, from which customers would purchase supplies, maintenance, accounting, ADP services and other support. All costs including pay, procurement, and construction for support activities are to be included in the fund. The goal is to highlight the full costs of support activities and allow operating units to determine the supplies and services that are needed for specific activities to be undertaken. This fundamental change in Defense's financial management system will lead to long-term savings.

Civilian Personnel.—Decreases in the size of the civilian workforce reflect the Department's defense management reforms as well as the smaller force structure. By 1992, total civilian end-strength will fall 11 percent from its high point in 1987, about the same percentage as for active-duty military personnel. These decreases have resulted largely from a civilian hiring freeze instituted in January 1990. By 1993, the civilian workforce will total 976,000, falling below one million for the first time since 1980. By 1996, the civilian personnel level is projected to be 14 percent below the 1990 level.

Base Closures.—The budget requests $634 million for continued implementation of the Base Closure and Realignment Act approved by the Congress in 1989. An amount of $998 million was enacted for these purposes in 1991. These funds provide for the construction of facilities and other one-time implementation costs at military installations to accommodate the transfer of activities from bases that will be closed or realigned.

The budget requests $100 million in 1992 for the initial costs of facilities and other realignment and closure actions which will be announced by the Secretary of Defense on April 15, 1991, as authorized by the Base Closure and Realignment Act of 1990. The additional realignment and closure actions stem from the force structure and program reductions required to meet the defense budget levels in the Budget Enforcement Act. The specific bases have not been identified, but savings of $150 million in 1992 and $735 million in 1993 are included in the legislative contingency account in anticipation of Congressional approval.

DESERT SHIELD

The Administration will submit a supplemental appropriation request for the incremental costs of Operation Desert Shield which includes Desert Storm. Such a request is not being submitted with this budget because the amount of this supplemental has not yet been reliably determined. It will depend on actual military requirements and on the amount of offsetting contributions from our allies. As the budget goes to press, there are evident and highly significant uncertainties with respect to both actual requirements and offsetting contributions. It is anticipated that these uncertainties will be clarified substantially in February, and that a more informed estimate of supplemental requirements will then be developed and submitted. In the mean time, the budget includes an assumed appropriation request of $30 billion in budget authority as a placeholder in accord with the estimate by the Comptroller General of the U.S. The actual supplemental request could be significantly different depending on events still to be determined.

INTELLIGENCE

Virtually all funding for the National Foreign Intelligence Program is included in the defense budget. The exact level is classified. The budget provides for obtaining information on potential threats, improving capabilities to counter hostile intelligence services, monitoring current and prospective arms reduction treaties, detecting changes in foreign military technologies, supporting the war on drugs, developing advanced technologies for intelligence, and conducting covert action operations in support of national security objectives in accordance with law. Additional resources are included to expand human source collection and to focus intelligence programs on new priorities.

ATOMIC ENERGY DEFENSE ACTIVITIES

These activities, conducted by the Department of Energy, include research, development, testing and production of nuclear weapons; production of nuclear materials; storage and cleanup of nuclear and other hazardous wastes from defense programs; and design of reactors for nuclear-powered Navy vessels. The waste management program provides treatment, storage and disposal for all defense nuclear and hazardous wastes and supports research and development on the problems of isolating and permanently storing these wastes.

The budget includes for these purposes budget authority of $11.8 billion in 1992, compared to $10.9 billion and 1991, exclusive of a proposed supplemental 1991 appropriation of $623 million. The budget provides for the restart of facilities at the Rocky Flats plant and for the production of nuclear weapons to meet the requirements of the forthcoming Nuclear Weapons Stockpile Memorandum. The budget provides for the operation of only one reactor at the Savannah River Site, which will produce sufficient materiel to meet all needs. The budget request also includes $500 million in 1992 for the continued design of new production reactor capacity and $42 million for activities related to reconfiguration of the nuclear weapons complex. In addition, the budget requests $3.7 billion, an increase of $970 million over the enacted 1991 level, for environmental restoration and waste management activities at defense facilities. The proposed 1991 supplemental provides an additional $340 million for these activities.

The proposed 1991 supplemental includes $283 million to speed resumption of activities at Rocky Flats and $340 million to initiate activities necessary to meet environmental compliance agreements.

DEFENSE-RELATED ACTIVITIES

Defense-related activities include civil defense and emergency preparedness activities of the Federal Emergency Management Agency, the Selective Service System, and the Maritime Administration's Ready Reserve Force, which provides for a standby fleet that can be activated when needed. The budget requests $757 million in budget authority and $756 million in outlays for these purposes in 1992, compared to $1,053 million and $947 million respectively in 1991.

5-YEAR PROJECTIONS

Tables A–4 and A–5 show estimates of budget authority and outlays for each of the major elements of the national defense function.

VII.B. ADVANCING AMERICA'S INTERESTS ABROAD

INTERNATIONAL AFFAIRS

The primary objective of international affairs programs is to support U.S. interests abroad. The overriding interest is the security of the United States and of its citizens overseas. The United States also has a major stake in the international economy. The economic growth of this country is now affected by the degree to which other countries are willing to adopt market oriented economic systems with open trade and investment policies. Another element of U.S. policy is humanitarian concern for other, less fortunate peoples worldwide.

As shown in Table B–1, the budget requests $34 billion in budget authority and $19.6 billion in outlays for discretionary international affairs programs. These amounts are consistent with amounts provided in the Budget Enforcement Act. While budget authority increases by 70 percent over 1991, $12.2 billion of the growth is accounted for by an increase in the U.S. quota in the International Monetary Fund. Such quota increases occur only periodically and do not involve outlays.

International Security Assistance

The Persian Gulf crisis and the earlier events in Panama and Nicaragua have demonstrated the vital role of security assistance in supporting U.S. interests in a volatile time. Budget authority of $8 billion is requested with outlays estimated at $7.7 billion.

Security assistance advances U.S. national security and foreign policy goals by promoting the physical security and economic stability of friendly and allied countries. Purchases of military goods and services are funded through foreign military financing, a program managed by the State and Defense departments. Economic stabilization and growth are promoted through the economic support fund managed by the State Department and the Agency for International Development (AID). Exchanges with members of friendly and allied armed forces are carried out through the international military education and training program run by the Defense Department.

Currently, the most critical security need is support of key U.S. allies in the multilateral effort to respond to Iraqi aggression in the Persian Gulf, in particular Egypt and Turkey. These countries have incurred substantial risk and economic hardship by their firm support of international sanctions and other means to force Iraq out of Kuwait. The importance of maintaining support for Israel in these circumstances is self-evident.

In Latin America security assistance to counter cocaine production is vital. While there has been substantial disruption in drug trafficking from the Andean countries, the war on drugs is far from over. Thus, the budget proposes continuing military aid and increasing economic support fund spending in the Andean area. More than $400 million in security aid is proposed for these countries, an increase of 47 percent over 1991. The aid is conditional on vigorous efforts to halt trafficking.

Security assistance is also provided to countries that allow the United States military base rights on their territories. Bases in Portugal and Greece have been important to the success of the Desert Shield deployment.

While the supporting materials for the budget will contain specific country-by-country proposals for security aid, it is impossible to predict now precisely what actual needs will be in 1992—particularly in the Middle East. The latter uncertainty underscores the need to avoid the earmarking of large portions of security assistance programs by country. In 1990, 88 percent of the two major security assistance programs was earmarked by Congress. The Administration will make a major effort to eliminate security assistance earmarks in 1992 appropriations.

Other Programs.—Other security assistance programs include peacekeeping operations in Cyprus and the Sinai desert and anti-terrorism assistance to friendly countries.

* Under current budget law, the debt restructuring proposed in 1991 will require no budget authority or outlays. Under credit reform principles to be implemented in 1992, the 1991 program would be $98 million in budget authority and outlays.

International Development and Humanitarian Assistance

The United States continues to play a major role in alleviating suffering and promoting sound economic policies in the developing world. In 1992, the budget proposes $7.9 billion in budget authority and $6.7 billion in outlays for this program category. These programs are intended to promote the growth of market-oriented economies through budgetary support, the financing of development projects and the provision of expert advice to foreign governments and private entities. They also provide relief supplies and funds to meet major natural and manmade disasters and to aid refugees abroad and resettle them in the United States.

Agency for International Development (AID).—AID provides the bulk of U.S. bilateral development assistance. For 1992, the budget would hold the programs under AID management about level, adjusting for inflation, at $3.3 billion following an increase of $.6 billion in 1991. Emphasis will be placed on encouraging improved economic performance by recipient countries, promoting private sector-led growth and supporting the emergence of democracies.

Assistance for Eastern Europe.—Within funds available to AID, the budget proposes continuation of the recently initiated economic assistance to Eastern Europe. Substantial amounts of aid are being provided in recognition of the difficulties that the new democratic governments face in the unprecedented task of shifting their economies from the communist model to free market principles. Much of the assistance will be directed toward the encouragement of small, private enterprises. Budget authority for AID funding for Eastern Europe would increase from $370 million in 1991 to $400 million in 1992. In addition, under the multilateral development banks heading, the budget seeks in 1992 the second of five $70 million installments to capitalize the European Bank for Reconstruction and Development, which also supports market oriented economic reforms in Eastern Europe.

Enterprise for the Americas Initiative.—A significant new activity in the development and humanitarian aid category is the President's special program for Latin America. This program recognizes the historic opportunity for the countries of the hemisphere to make major economic strides under democratically elected governments. It is based on the concepts of Latin initiative and partnership with the United States. It also recognizes that while foreign aid can be an important stimulant to growth, other economic actions in the areas of trade, investment, and debt restructuring are particularly well suited to the needs of the Latin American and Caribbean countries.

The budget proposes a debt reduction program for Latin America that will begin in 1991 under existing legislative authority. In 1992 the program will have a subsidy value under credit reform of $310 million. Debt reduction will be conditioned on the adoption of economic reforms by recipient countries, including measures to open their investment regimes. Through such reforms, countries will build the basis for sound and sustained economic growth, thereby increasing investor confidence and their ability to attract private investment and flight capital.

Complementing debt reduction will be a multilateral investment fund managed by the Inter-American Development Bank. It will provide carefully targeted support for diagnostic studies of a country's investment climate, for privatization of government owned companies and for encouragement of small scale private enterprise. The budget proposes $100 million per year for five years starting in 1992 to capitalize this fund. Other developed countries are expected to provide $200 million per year for the fund.

Multilateral Development Banks.—The multilateral development banks include the World Bank group and the European, Inter-American, Asian and African development banks. These banks pool the resources of the developed and developing nations to provide loans and expert advice to promote the economic growth of the poorer countries.

Funding levels for each multilateral bank and the funding shares of contributing countries are agreed on periodically by member governments covering multi-year periods—usually three or four years. Annual installments are paid on the agreed shares. For 1992 $1.5 billion of the $1.7 billion requested for payment by the Secretary of the Treasury to the multilateral banks represents installment payments due under previous funding agreements.

Food Aid.—The Department of Agriculture (USDA) and AID jointly administer this program. For 1992, the budget proposes $1.3 billion in food aid for the shipment of 5.6 million metric tons of commodities. The 1990 Farm Bill enacted major reforms in food aid that will enable the United States to meet food aid challenges more effectively through the next century. The law established a new government-to-government grant program, Title III, managed by AID, to provide food to the poorest countries of the world. Title III, proposed to be funded at $309 million in 1992, will complement U.S. economic development objectives. USDA will continue to provide loans, $317 million, to foreign governments under Title I but will place greater emphasis on market development for agricultural commodities. Under Title II, funded at $627 million, the U.S. government will continue to provide emergency and non-emergency food aid to individuals through private voluntary organizations and the United Nations World Food Program.

Refugee Programs.—The plight of refugees has attracted world attention in recent years. As a result, the United States increased the number of refugees admitted to this country by 14 percent in 1990. Funding in 1991 maintains this level and increases by $62 million U.S. contributions to the care and maintenance of refugees abroad. The $511 million requested for 1992 in the budget for refugee assistance will maintain the increased program including the admission of 50,000 Soviet refugees and 54,000 refugees from Southeast Asia. Refugee programs are managed by the Department of State.

Voluntary Payments to International Organizations.—In addition to mandatory UN payments, discussed below, the State Department provides voluntary contributions to 25 international programs that support important multilateral development, humanitarian and scientific activities. Programs funded by this account directly serve specific U.S. interests in nuclear non-proliferation, the environment, and improvements in child health while encouraging burden sharing of the costs by other countries. The $250 million requested in the budget for 1992 is a 12 percent decrease from the 1991 enacted level. The decrease is primarily due to the completion of a third funding cycle for the International Fund for Agricultural Development and a decreased payment for the UN Afghanistan Trust Fund which is phasing down.

State Department Narcotics Assistance.—The major emphasis of the international counter-narcotics program is on providing military and economic assistance to the Andean countries as described above. In addition, the State Department's narcotics control program will provide $172 million in assistance in 1992 to support counter-narcotics law enforcement activities in the Andean countries and elsewhere in the world. Other international programs also contribute to the fight against drugs as shown in the table below.

Peace Corps—The Peace Corps exemplifies, at the grassroots level, the President's emphasis on voluntarism and U.S. concern for the peoples of other countries. The $200 million requested for the Peace Corps in 1992, eight percent above 1991, will support 5,060 volunteers and will enable the agency to enter several new countries. The Peace Corps will also expand its presence in Eastern Europe, Latin America and Africa.

Other Programs.—Other development and humanitarian assistance programs include the African Development Foundation and the Inter-American Foundation, which provide small scale grants for social and economic development to indigenous private organizations. Also included are the Overseas Private Investment Corporation, which insures and finances

Table B–2. **INTERNATIONAL NARCOTICS CONTROL ASSISTANCE**

(In millions of dollars)

Function 150 Anti-Narcotics Programs	1990[1]	1991 estimate	1992 request

Economic Support Fund	42.7	187.2	283.8
Agency for International Development	17.2	14.6	10.3
State Department Narcotics Assistance	129.5	150.0	171.5
United States Information Agency	3.4	3.8	4.5
Total	307.3	455.9	611.3

[1] Does not include up to $53 million worth of equipment provided to Latin America through 506(a)(2) drawdown authority.

private U.S. investment in developing countries and the trade and development program, which finances feasibility studies abroad to facilitate subsequent U.S. investment.

Conduct of Foreign Affairs

This category includes the cost of diplomatic representation, including consulates and missions to international organizations. It also includes annual payments that the United States makes to the United Nations, its affiliated specialized agencies and to other international organizations such as NATO.

State Department Salaries and Expenses.—$2.05 billion is requested for the salaries and expenses account to carry out important foreign policy commitments in Eastern Europe and to establish a permanent U.S. representative to the Conference on Security and Cooperation in Europe. Funds are requested to meet new workload requirements associated with the Immigration Act of 1990 and improve diplomatic security overseas. In addition, the budget includes investment in the State Department's telecommunications, data processing, and financial management systems.

Foreign Buildings.—For 1992, the budget proposes $570 million in the foreign buildings account to complete a plan for constructing physically secure embassies in locations abroad that are subject to high threats of terrorist attack or espionage. Balances of funds appropriated in the 1980s for this purpose will be exhausted in 1992. Recent Iraqi threats of renewed terrorism against Americans demonstrate the importance of this effort. Funds are also included for construction of embassy facilities in Moscow that will be secure against electronic and other penetration.

United Nations Programs.—As East-West tensions diminish other world problems ranging from regional disputes to the environment demand increased attention. The United Nations and other international organizations offer forums to help deal with such challenges. The importance of the United Nations to the achievement of U.S. foreign policy objectives has been most pointedly demonstrated by the organization's role in the Persian Gulf crisis.

In recognition of the value of international organizations and multilateral peacekeeping activities, the Administration sought in the 1991 budget to end the recent practice of cutting appropriations for new payments to UN programs below amounts mandated by treaty commitments. The Administration also sought full appropriation of the arrearages accumulated because of the appropriations shortfalls. The Congress provided, with minor exceptions, the full new 1991 payments due but only that portion of arrearages actually planned to be transferred to the organizations in 1991. For 1992, the budget seeks $824 million for new mandated payments due in that year and $503 million for all of the remaining arrearages. The arrearages will be transferred to the institutions in roughly equal installments over the 1992–95 period for mutually agreed special purposes. Full appropriation in 1992 will provide an incentive for the organizations to engage in sound financial planning. The United States remains committed to continuing the progress made in the international organizations towards fiscal restraint with a greater focus on essential programs.

Other programs.—Other conduct of foreign affairs programs include the Arms Control and Disarmament Agency, the International Trade Commission, the U.S. Institute of Peace, and a number of small State department administrative accounts.

Foreign Information and Exchange Activities

Programs that convey information about the United States and its policies, termed "public diplomacy", are conducted by the United States Information Agency (USIA). Public diplomacy also includes support through the Board for International Broadcasting for Radio Free Europe and Radio Liberty (RFE/RL), which provide radio broadcasts to the peoples of Eastern Europe and the Soviet Union.

United States Information Agency

It is important that the peoples of other countries have accurate information about the United States and its policies and a good understanding of American society and its values. The United States Information Agency (USIA) is responsible for meeting these needs. It does so through exchanges of persons (both short term visits and the longer term Fulbright scholarships), through publications, and through television and radio broadcasting, libraries and exhibits such as the U.S. pavilion at the 1992 Seville/Genoa Exhibitions.

Eastern Europe, the Soviet Union and Islamic countries will require special public diplomacy efforts. In 1992, a new emphasis will be placed on activities in these areas, while programs will be slightly reduced in parts of the world, such as Western Europe, that have easy access to a wide range of private and public sources of information about the United States.

Radio broadcasting was a key element of public diplomacy throughout the Cold War. USIA's Voice of America (VOA) and RFE/RL were usually the only way to reach mass audiences in communist countries. Their broadcasts made valuable contributions to the political revolutions in Eastern Europe and the Soviet Union. In recent years, U.S. broadcasting has been augmented by Radio Marti and TV Marti, which provide surrogate local broadcast media for Cuba.

In the 1980s, VOA initiated a major modernization of its transmitter network to assure that all key target audiences receive a clear signal. The budget includes $98 million in 1992 to continue that radio modernization program.

Board for International Broadcasting.—With the establishment of democratic governments and the development of reliable, free media in Eastern Europe, the need for RFE/RL broadcasts to the region is diminishing. As recent events in the Baltic countries show, however, there remains continuing need for the surrogate domestic radio services that RFE/RL provide. The budget proposes only a gradual phase down of this program. In 1992, $218 million is requested. While above the $206 million estimated for 1991 due to inflation and special financing factors, the 1992 funding level will lead to a reduction in broadcast hours.

Other Programs.—Other foreign information and exchange activities programs include exchanges of persons between the United States and Japan and a number of other Asian countries.

INTERNATIONAL FINANCIAL PROGRAMS

This category of international affairs spending includes funding for two major financial institutions.

Export Import Bank.—This Federal agency provides loans, loan guarantees, insurance and a small amount of grants to finance exports of U.S. capital goods primarily to developing countries. Budget authority of $556 million and outlays of $185 million will support export financing of $9.5 billion in 1992. This would maintain the program at probable 1991 levels adjusted for inflation.

International Monetary Fund.—The purpose of the Fund is to promote a stable world monetary order, creating conditions for sustained economic growth. It does so in part by drawing on funds deposited by member governments to make medium term loans to governments with balance of payments problems. Loans are provided on conditions that promote economic reforms in borrowing countries.

Roughly every five years, the Fund's members assess whether their deposits, called quotas, are adequate to meet its objectives. As a result of such an assessment last year, it was decided to increase quotas by 50 percent. The increase in the United States quota will amount to $12.2 billion in budget authority, which is requested in 1992. Because of the monetary character of quotas, there will be no outlays associated with the increase, but exchange rate adjustments on previous U.S. quota subscriptions resulted in $741 million of negative outlays in 1990.

Other Programs.—Other international financial programs include a $20 million fund for contingencies in 1992 as well as the special defense acquisition fund. The latter is a revolving fund for the advance procurement of military goods for security assistance in which receipts occasionally exceed disbursements.

VIII. ADDRESSING INHERITED CLAIMS, HIDDEN LIABILITIES, AND DEBT

VIII.A. RECOGNIZING AND REDUCING FEDERAL UNDERWRITING RISKS

HIGHLIGHTS

This Chapter discusses in sequence:

- Insurance
  - —Deposit insurance
  - —Pension guarantees
  - —Other Federal insurance
  - —Private insurance
- Credit and GSEs
  - —Credit reform
  - —Government-sponsored enterprises
  - —Housing credit
  - —Education credit
  - —Agriculture credit
  - —Business credit

The Federal Government continues to be the Nation's largest source of credit and underwriter of risk; the growth of its commitments continues to outpace the growth of the economy. At the end of 1990, the face amount of Federal and federally assisted credit and insurance was $6.2 trillion—up 8 percent from a year ago and 113 percent from 10 years earlier. (See Table A–1.) About half of all non-Federal borrowing is assisted by Federal credit programs, Government-sponsored enterprises (GSEs), or Federal deposit insurance.

Federal loans and contingent credit and insurance liabilities can result in substantial budgetary costs to the Government when failures and defaults occur. Table A–2 indicates that total cumulative outlays resulting from deposit insurance over the next 6 years could range from $112 billion to $161 billion under likely or more stressful conditions. The present value of future costs for other insurance, GSEs, and credit programs might total $112 billion to $191 billion under a similar range of conditions.

The size and growth of these programs also imposes additional economic costs that could well exceed their potential budgetary costs.

The dramatic growth of the Government's contingent credit and insurance liabilities is in part due to failure to reflect their true costs in the Federal budget. Federal credit programs exist to provide benefits to certain borrowers or to channel additional resources to certain sectors. Thus, in most cases, Federal direct loans and loan guarantees are expected to result in an overall loss to the Government. In such cases, a subsidy cost and a loan or guarantee are combined in a single transaction. These default and interest costs have been paid over the life of the loan or guarantee, but in the past these costs were never explicitly budgeted at the time credit was extended.

Progress Last Year.—The credit reform provisions of the Omnibus Budget Reconciliation Act of 1990 (OBRA), enacted late last year, acknowledge the implicit cost of Federal credit programs. For the first time, this budget requests appropriations to cover the cost of direct loans and loan guarantees at the time credit is extended. For the first time, the Administration and the Congress will allocate budgetary resources by comparing credit program costs and their accompanying benefits on an equal basis with the costs and benefits of other programs. The new law also requires the Office of Management and Budget (OMB) and the Congressional Budget Office (CBO) to study and report to the Congress on the feasibility of applying credit reform principles to deposit insurance, other insurance, and GSEs.

During the past year, additional progress has been made in recognizing and reducing Federal underwriting risks.

- The new Resolution Trust Corporation (RTC) resolved 273 failed savings and loan institutions. As a result, the backlog of insolvent thrifts was cut in 1990 from 501 to 327. The number of troubled commercial banks fell from 1,151 to 1,006, although this apparent improvement is likely to be offset by rising loan losses and the growing number of banks with weak earnings.

- OBRA included reforms to several major credit and insurance programs. The capital resources of the Federal Housing Administration's (FHA) single-family mortgage insurance program would be restored to a financially prudent level by higher downpayments, premiums tied to default risk, and firm capital reserve target levels. The Farmers Home Administration (FmHA) credit programs would be substantially shifted from direct loans toward less-heavily-subsidized partial loan guarantees. Both the flat and the risk-related premiums for the Pension Benefit Guaranty Corporation's (PBGC) insurance were increased.
- A regular process of risk assessment and policy review has been established, including the many analyses reported in this Chapter.

Proposals for 1992.—Proposals for further reforms to reduce underwriting risk are included in this budget and will soon be sent to Congress.

- The Administration will present major proposals to: reform deposit insurance, restructure financial services regulation, reorganize regulatory responsiblities, and recapitalize the Bank Insurance Fund (BIF).
- Reauthorization of and comprehensive reforms in the guaranteed student loan (GSL) program are proposed in this budget. They are expected to reduce defaults and costs to the Government, while making the program more effective in helping students.
- A thorough review of the FHA multi-family loan program is planned, accompanied by measures to identify and eliminate physical and financial problems in low-income rental properties.
- Proposals are made to reduce defaults and costs for VA mortgage guarantees.
- Reforms are proposed to strengthen the Farm Credit System (FCS), to continue the improvements in FmHA credit programs, and to enable the Federal crop insurance program to better serve its purpose.
- Further proposals are made to increase pension funding and to advance PBGC claims in bankruptcy.

THE GROWTH OF FEDERALLY BACKED CREDIT AND INSURANCE

For the past two decades, outstanding Federal and federally assisted credit and insurance have grown faster than nominal GNP. By far the fastest growing category has been the loans and securitization provided by Government-sponsored enterprises. GSEs are privately owned but, because they have continuing Federal connections, they are perceived by financial markets to be quasi-governmental. This reduces their cost of funds in capital markets. The largest GSEs support housing credit; others channel funds to agriculture and education.

By far the Government's largest commitment is to Federal deposit insurance at commercial banks, thrifts, and credit unions. Until last year, deposit insurance was the next most rapidly growing. The Government also insures private pensions against insolvency. A variety of other programs insure against crop loss, flood damage, and other hazards.

Federal loan guarantees have grown rapidly, too. The largest amounts are for home mortgages insured by the Federal Housing Administration (FHA) or guaranteed by the Department of Veterans Affairs (VA). Student loans (GSLs) are guaranteed by the Department of Education, and smaller loan guarantee programs are scattered throughout the Government. Direct loans outstanding have declined in recent years as credit programs have shifted toward using loan guarantees.

In the past, too little attention was paid to the scope and scale of these commitments. Now, they are in the public spotlight. Insolvency of the Federal Savings and Loan Insurance Corporation (FSLIC) and many insured thrifts, mounting failures among commercial banks, the bailout of the Farm Credit System (FCS), the failure of the largest student loan guarantee agency, and large defaults on Federal direct and guaranteed loans have called attention to the immediate and potential costs of these programs to the taxpayer.

Assessing the Risks

Assisted credit (except for direct loans) and insurance create contingent liabilities; that is, they generate Government expenditures when and if the assisted parties default or become insolvent. The face value far exceeds the actual risk of loss, and does not even bear a constant relationship to the risk over time or from program to program.

Most loan guarantees will not default. To the extent that they do, the Government holds some collateral to help offset the cost. Most insured banks and thrifts will not fail, and, to the extent that they do, the Government's loss will be limited by the assets that they own. Most other events insured against will not occur. GSE bailouts may not be necessary and, if they do occur, Federal outlays will be much less than the GSEs' debt because of the GSEs' assets.

Unfortunately, however, defaults and failures have been increasing. In 1990, loan writeoffs were $2.9 billion, guaranteed loan defaults were $11.9 billion, and insurance costs were $92.7 billion, of which 96 percent was spent to cover losses at 433 failed banks and thrifts. By way of comparison, only 8 years earlier in 1982, loan writeoffs and defaults totaled $3.7 billion, and insurance claims $4.6 billion. Thus, total costs have increased twelve-fold.

Still larger potential future losses are perhaps even likely in view of the commitments that the Government has already made and those that it will make if current policies are continued. Table A–2 shows initial estimates of the size of these future losses. Their accuracy, of course, depends on the quality and completeness of the historical data from which they were derived and on future economic conditions. Efforts are continuing to fill in the gaps, to improve the quality of data routinely collected for these programs, and to improve estimation methods.

The top part of the table shows estimates of deposit insurance costs for failed banks, thrifts, and credit unions over the period 1991–96. For banks and thrifts, estimates were developed by projecting the effects of current and expected loan losses and earnings on future earnings and capitalization. Future income was further adjusted for anticipated in-

Table A–2. POTENTIAL FEDERAL COSTS

(In billions of dollars)

[1] Net of borrowing from Federal sources and federally guaranteed loans.

[2] Excludes loans and guarantees by deposit insurance agencies, for which costs are captured in the top section of this table. Excludes programs not included under credit reform such as CCC farm price supports. Defaulted guarantees which become direct loans are accounted for in guarantee volume and costs. The face value shown for direct loans is lower than the amount shown in Table A–1 by the amounts for these exclusions.

creases in deposit insurance premiums. The forecast also incorporates the effect of the expected weakness in the economy in 1991, resulting in higher loan losses in 1991 and 1992. Beyond 1993, estimates also take into account the rate at which undercapitalized institutions have failed in the recent past. From 1991 through 1996, outlays for the three classes of insured depositories are estimated to total $112 billion. Enactment of proposals to recapitalize the Federal Deposit Insurance Corporation's (FDIC) Bank Insurance Fund (BIF), to reform deposit insurance, and to restructure financial services regulation should substantially reduce the projected outlays. A more severe recession could increase them to $161 billion.

The lower part of Table A–2 shows a range of estimates for the present value of future potential costs of pension and other insurance, GSEs, guaranteed loans, and direct loans. In each case, the smaller number represents the loss if recent economic trends continue and proposed reforms are enacted. The larger number represents the loss that might occur under severe economic stress and if reforms are not enacted.

Costs for pension guarantees were estimated by analyzing the distribution and amount of pension underfundedness and the likelihood that firms might fail under different economic scenarios. Estimates were developed for the housing GSEs and credit programs—Fannie Mae, Freddie Mac, FHA single family, and VA—using simulation models to forecast mortgage defaults and prepayments. Estimates for the Farm Credit System were made using a model quantifying the performance of loan portfolios under optimistic and stressful economic scenarios.

Future costs for other credit programs were estimated by projecting current outlay levels into the future, taking into consideration the improvements proposed in each of these programs or the effects of worsening economic conditions. These estimates are more accurate than they would have been last year. Implementation of credit reform will further improve them.

Among the credit programs with larger costs are several with substantial interest subsidies. These include direct loans on which the borrower pays less interest than the cost of Treasury borrowing— for example, many FmHA and REA loans. They also include student loans, where the Government pays the interest while the student is in school and pays any interest above an 8 percent cap thereafter.

Default costs are high for some multifamily housing programs, farm ownership and operating loans, Export-Import Bank lending, small business credit, and REA power supply loans. Among loan guarantees, GSLs have a high default rate, while VA guarantee and FHA insurance defaults come mainly from mortgages with very high loan-to-value ratios.

Federal lending and insurance risks depend on both economic conditions and public policies. The financial environment is changing rapidly. Basic trends are unfavorable for depository institutions and for several sectors assisted by Federal credit. The insurance and credit programs themselves encourage private risk-taking. All of this implies large Federal outlays unless reforms are undertaken to control the growth of these contingent liabilities and to better manage specific sources of risk.

INSURANCE

Insurance Highlights

The scope and composition of Federal insurance is shown in Table A–3. By far the largest commitment is $2.8 trillion of deposit insurance. The costs associated with this commitment are increasing because of stress in the financial services industries.

- Technological change, increased competition and the trend toward securitization of financial assets (mortgages, consumer, and business loans) have reduced the profitability of insured banks' and thrifts' traditional lines of business.

- In the past decade the number of thrifts fell from nearly 4,000 to 2,389—of which only 1,130 are well-capitalized and profitable.
- Commercial banks have more capital and are more profitable on average than thrifts. However, bank loan losses have been climbing for three decades.
- Flaws in Federal deposit insurance are now seen to have contributed to the cost of the thrift cleanup and to the deteriorating condition of the Bank Insurance Fund.

The Administration's comprehensive reform proposals for the Federal deposit insurance system will strengthen that system to overcome many of these problems.

For pension guarantees and disaster insurance, the Administration's proposals focus on improving the scaling of premiums and recoveries in relation to risk.

Rationale for Insurance.—The Federal Government insures individuals and firms against certain hazards not covered by private insurance. The scale and range of Federal insurance commitments are summarized below. The table shows the face value of the insurance, which is far larger than any reasonable estimate of the probable loss to the Government. The probable loss as a percentage of face value is likely to differ widely from program to program.

Government insurance programs have been developed in part because some risks are both hard to predict and catastrophic in size. It is difficult or impossible to develop actuarially sound premium structures and reserves that would permit private firms to insure such risks. The Federal Government is uniquely suited for this role by its size, sovereign powers, and ultimate responsibility for the general welfare. As a result, most Federal insurance programs violate the basic insurance principle that premiums and reserves be based on reliable forecasts of potential costs.

When Government insurance is underpriced relative to its long-run cost, those who are protected receive a subsidy. Subsidized insurance increases moral hazard, which encourages additional risk-taking. This partly undermines the purpose of the program and increases future insurance losses that must be covered by Federal outlays.

DEPOSIT INSURANCE

Along with other financial services firms, depository institutions perform a critical economic function by using individual and cor-

Table A–3. **FACE VALUE OF MAJOR FEDERAL INSURANCE PROGRAMS**

(In billions of dollars)

Program	1970	1975	1980	1985	1988	1989	1990

porate savings to finance credit for businesses and households. Deposit insurance supports this intermediation by assuring savers that their funds will be protected even if their bank, thrift, or credit union fails.

Government's potential exposure as deposit insurer is part of its more general responsibility for the health and stability of the financial system. Because of the need to manage this exposure, financial services are among the most heavily regulated industries. An elaborate structure of Government rules and oversight restricts what securities firms, insurance companies, and depository institutions can do. Among depositories, statutes and regulations impose distinct roles on thrifts, banks, and credit unions that a freely operating market might not support.

Changing financial markets are putting many financial firms under severe stress. The rate at which banks and thrifts fail has increased in a decade from a handful to hundreds each year. The pressure of change has revealed flaws in the system of Government regulation and deposit insurance. This has forced a gradual, partial liberalization of banking regulation, beginning with the breakdown of interest rate restrictions in the 1970s and continuing with a long list of piecemeal adjustments. But, as might be expected, statutory and regulatory changes have lagged developments in the market.

First Steps Toward Reform.—While the problems have been brewing for many years, they have now reached the critical point. As a result, the costs of inadequate Government policies are being recognized. By 1988 the massive losses generated by failing thrifts had bankrupted the Federal Savings and Loan Insurance Fund. In August 1989, the Financial Institutions Reform, Recovery, and Enforcement Act (FIRREA) established a new Savings Associations Insurance Fund (SAIF) for thrifts. A new institution, the Resolution Trust Corporation (RTC), was given the task of resolving insolvent savings and loans. That Act also took the first steps toward deposit insurance reform by prohibiting certain high-risk uses of thrift funds, tightening oversight, and raising capital requirements.

In recognition of the need for other major changes and in deference to the issues' complexity, FIRREA mandated a study by the Treasury Department to be completed by Feb-

Table A–4. **RESERVE RATIOS FOR FEDERAL DEPOSIT INSURANCE**

(Dollar amounts in billions)

Fund	1970	1980	1985	1988	1989	1990

[1] FIRREA dissolved the FSLIC and created the Savings Association Insurance Fund to insure thrifts formerly insured by FSLIC. SAIF is not responsible for either currently insolvent thrifts or those that may become insolvent through August 1992. These costs will be handled by the Resolution Trust Corporation.

ruary 1991. This study includes comprehensive proposals to reform both deposit insurance and the structure of financial services regulation created in the 1930s.

Further Reform Is Needed—Recently, attention has shifted from the problems of savings and loans to those of banks and the Federal Deposit Insurance Corporation's (FDIC's) Bank Insurance Fund (BIF). Most banks are healthy, but some—including several large firms—are weak. The FDIC's reserves for bank failures have been falling since 1987 and will fall further in 1991 and 1992—unless the Fund is recapitalized.

Banks and thrifts are bearing much of the cost of covering depositor losses through higher insurance premiums, new capital requirements, and closer supervision. Taxpayers are paying for losses also, either in the form of higher taxes or reduced spending on other Government programs. Everyone is hurt when misallocation of financing wastes resources and slows growth. To reduce and eventually eliminate this burden, the Administration is proposing a comprehensive set of reforms intended to strengthen depository institutions and sharply reduce deposit insurance costs. These reforms are discussed in detail in the Treasury study.

Reform is urgent. Unless the President's reform proposals are enacted, bank failures will add an estimated $42 billion to BIF's outlays and the Federal deficit from 1991 through 1996. A more severe and prolonged recession could raise outlays to $78 billion and drain the Fund more rapidly. Unless new resources are provided to the BIF, its reserves will be exhausted in 1992. To meet this shortfall will require roughly $25 billion in new resources between now and 1996.

Losses generated by closing and disposing of savings and loans that failed in 1989 and 1990 or will fail through 1993 are expected to exceed $100 billion. From 1991 through 1996, the cleanup is estimated to add $70 billion to the deficit.

On a far more modest scale, credit union failures will cost that industry's Share Insurance Fund an estimated $80–100 million in 1991, which can be paid from current premium and interest income. However, nearly 700 federally insured credit unions, with over $9 billion in assets, were classified by the NCUA as "troubled" at the end of September 1990.

Industries Under Pressure

To understand why reforms are needed and what reforms are appropriate, it is important to understand what has made the present structure so expensive. The problems begin with changes in the financial industries themselves. Around the world, new information and communications technologies are making financial markets more efficient and closely integrated. New ways of providing credit bypass the traditional depository intermediaries.

Both as providers of services to depositors and as purveyors of credit, depository institutions feel the hot breath of new competitors. Uninsured money market funds (MMFs) are a close substitute for insured bank savings. MMF growth was temporarily checked by deregulation of bank interest rates in 1982 but soon resumed. These funds now exceed $450 billion.

Banks also face strong competition from other business lenders. Business borrowing increased dramatically in the 1980s. From 1981 to 1989, U.S. corporations retired $570 billion of equities while adding $1,140 billion of debt. Financial intermediaries whose specialty is business lending might be expected to profit from this borrowing surge; but banks did not fully participate. Corporate lending, once the big banks' bread and butter, weakened as many companies sold commercial paper and junk bonds directly to investors. The outstanding volume of commercial paper has risen from one-tenth of banks' commercial and industrial loans 30 years ago to three-fourths today.

Banks face other competitors in both business and consumer lending. During the 1980s, foreign banks steadily increased their share of commercial lending in the U.S. at the expense of U.S.-chartered institutions. Although Japanese banks lately have been retrenching, capital-rich European banks continued their U.S. inroads in 1990, raising the total of foreign banks' U.S. assets to over $730 billion at mid-year. Meanwhile, U.S. banks are losing ground overseas. Their international lending has fallen steadily since 1982 and now totals less than $210 billion. Under pressure to cut costs, several major banks dropped ambitious plans to compete in foreign markets in the past year.

Finance companies, which are well capitalized and fund themselves mainly with uninsured commercial paper, also have cut in on banks' business. Their assets—mainly business (51 percent) and consumer (30 percent) loans—increased from $64 billion in 1970 to $551 billion in late-1990. Insurance companies and pension funds are strong competitors with banks for real estate lending. Automobile manufacturers have competed away some of the profits banks once made from car loans.

With the erosion of their traditional role, depository institutions have searched for new ways to earn profits. They have turned to a variety of new activities: credit cards, mortgage banking, home equity loans, letters of credit, currency trading, and many others. The returns from some new activities are more volatile and—because the risks are less well understood—less predictable.

In the long run, the greatest effect of technology on depositories may be through the rapid spread of securitized credit, such as mortgage-backed securities. By lowering the cost of pooling and pricing loans, computers and modern telecommunications facilitate the construction and marketing of these often-complex securities. The funds of investors in these instruments then replace bank deposits as the ultimate source of borrowed money. This benefits the economy by making risks more manageable and thus lowering the cost of capital. However, because of its greater efficiency, the new system of funding credit also erodes the profitability of traditional intermediation.

This transformation is exemplified by the development of mortgage-backed securities, facilitated by the housing GSEs and thus subsidized by Government. Funding mortgages through this system is more efficient for two reasons: it is less costly for large GSEs to raise funds by marketing mortgage-backed securities to investors than for the typical, much smaller thrift to gather deposits through a network of branches; and it is easier for the GSEs than for small, localized lenders to diversify their risks. Government sponsorship gives the GSEs a further edge by giving holders of their securities confidence that they will be shielded from loss by the Government even if the GSE fails, thus lowering the yield that these investors demand. Some of the cost savings from greater efficiency and Government sponsorship is passed along to homebuyers in the form of lower mortgage interest rates. Traditional mortgage lenders are forced to match these rates even though their operating costs are higher and their risks are less well diversified, contributing to the squeeze on their profits.

By skimming off the standardized and generally less risky loans, securitization leaves depositories holding a disproportionate share of loans that are more difficult to underwrite and price correctly. Widespread securitization of business loans is not yet a reality, but the process is gaining steam. If securitization of business and consumer credit grows rapidly, as some predict, it could take much of the profit out of the core lending activity of commercial banks and leave them holding a larger share of hard-to-price loans. More optimistically, banks could profit from this development both by brokering securitized credits and by trading these securities to better balance their risks.

Effect on the Thrift Industry.—The effect of changing technology and markets on thrifts has influenced the large number of firms that are undercapitalized and either marginally profitable or losing money. Although the industry has reduced its sensitivity to interest rate swings, partly by holding adjustable-rate mortgages, many currently profitable thrifts remain vulnerable to large losses should rates rise sharply.

From 1980 through September 1990, the number of savings and loans, excluding those now in Government conservatorship, fell from nearly 4,000 to 2,389. In the first year since FIRREA was enacted, industry assets fell by 14 percent. Of the surviving institutions, only 1,130, holding 32 percent of all industry assets, were judged by the Office of Thrift Supervision to be well-capitalized and profitable.

Condition of the Federal Home Loan Bank System.—The Federal Home Loan Bank (FHLB) system, a GSE, was established in the 1930s as a central credit facility for home mortgage lenders. At that time, the private sector was a less reliable source of funding for home loans, especially in times of economic distress, than it is today. The future of the FHLB system may be tied to that of the thrift industry and the system's ability to attract and hold members.

The Banks are owned collectively by their members, primarily thrifts and credit unions, who are the only eligible borrowers. Loans to members (termed "advances") provide thrifts with a source of funds other than deposits—one on which they need not pay an insurance premium. Because the Banks require their advances to be collateralized by a pledge of safe assets, they are protected from losses even if the thrift fails.

The evolution of housing finance and changes in regulation have led to the development of alternative sources of funds. They have superseded the FHLB's original purpose and reduced the benefits of system membership. Healthy thrifts occasionally use longer-term advances to better match their asset and liability durations. Troubled thrifts tap advances as a way to maintain liquidity when other funding becomes more expensive or runs off. After 1985, the outstanding volume of FHLB loans grew as these thrifts borrowed from the Banks.

The volume of advances outstanding peaked at $166 billion in April 1989, then declined as insolvent savings and loans were closed. On June 30, 1990, 51 percent of SAIF-insured thrifts held FHLB advances. At the end of September, outstanding advances had dropped to $118 billion. If the savings and loan industry continues to shrink as anticipated, demand for FHLB lending will decline further in 1991 and perhaps beyond.

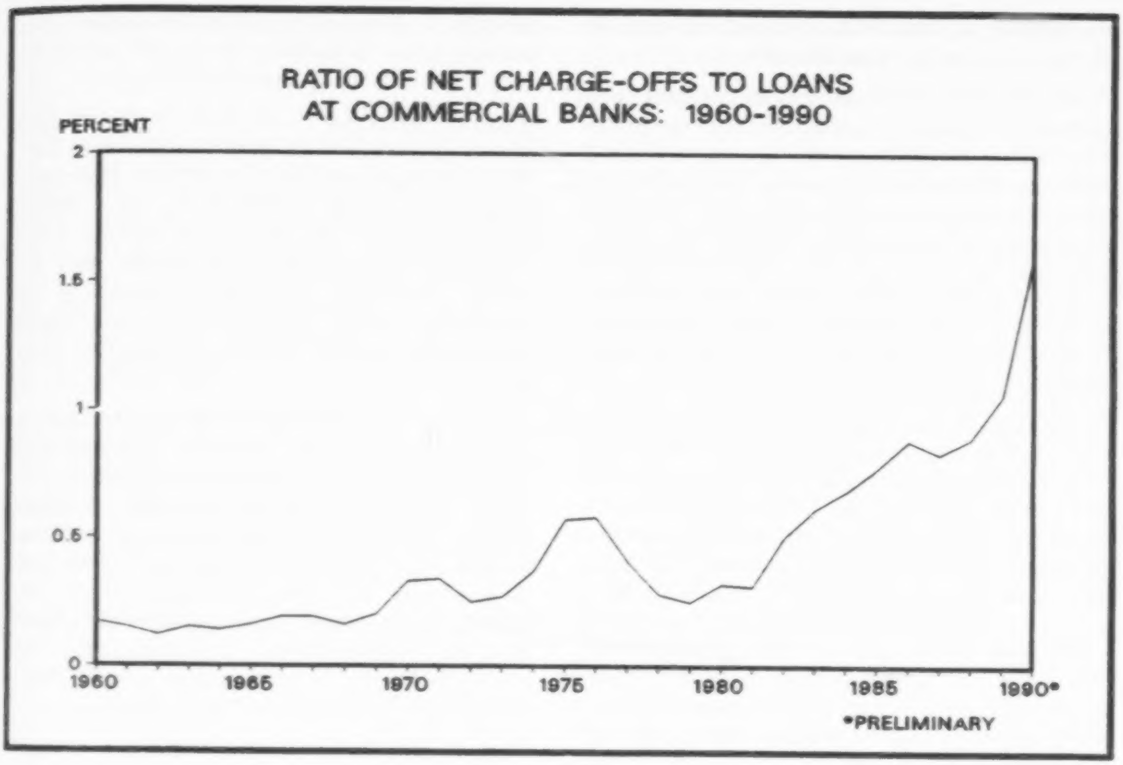
While the system's activity is shrinking, some of the demands on its income are fixed. FIRREA jointly obligated the system's 12 district banks to pay $300 million each year of the interest owed to investors on REFCORP bonds used to help finance the thrift cleanup. FIRREA also committed the system to provide between $50 and $100 million annually to subsidize home mortgages for certain low-income buyers. In 1989, the Banks' combined income was $1.8 billion, allowing them to pay dividends averaging 10.65 percent of capital stock. In 1990, the Banks will earn an estimated $1.4 billion; through the first nine months of the year, they paid dividends at an average rate of 8.75 percent of capital stock.

The Banks' income from advances and other investments may contract further in 1991 and beyond as many more insolvent thrifts are closed. As this happens, their fixed commitments will claim an increasing share of earnings. For instance, if the volume of advances falls by another 30 percent, earnings will probably fall by a similar proportion. Although the Banks have made an effort to maintain dividends in the face of declining profits, the dividends are is likely to fall sharply as well. If some or all of the Banks are forced to reduce dividends, membership will be even less attractive. Already, some thrifts have expressed a desire to cash out their stock and leave the system. Unless offset by new members, departures would accelerate the reduction in demand for advances and leave even less income to meet fixed obligations and pay dividends. A decision thus may be needed in the near future regarding the Banks' future role.

Effects on Commercial and Savings Banks.—Commercial banks insured through the BIF hold more capital and are more profitable on average than the thrifts. In the third quarter of 1990, for example, the average private sector thrift lost money, while the average commercial bank earned 45 cents on each $100 of assets.

Earnings have been hurt in recent years as large banks lost heavily on foreign loans. Other groups of banks ran into problems at different times: those specializing in farm lending in the Midwest in the mid-1980s; banks in the oil-producing states from 1986 through 1988; and recently those with large commercial real estate exposures, especially on the East Coast. To one degree or another, all had followed the siren song of asset appreciation that started in the 1970s. That speculative bubble has now been pricked. In the past four years, banks have written off $75 billion in bad loans, three times the total charged off from 1948 to 1981.

The relatively recent surge in loan losses and bank failures is actually the culmination of a trend toward increased risk that extends over the past two decades. The greater risks carried in bank portfolios can be indicated by the rate at which loans go bad and must be



charged off against the banks' capital. This rate began to rise slowly in the 1970s, accelerating after 1981. Preliminary 1990 estimates show charge-offs more than 50 percent above 1989. This trend implies that the stress on the banking system is deeply rooted, progressive, and not likely to end soon.

Together, large commercial banks and savings banks pose the greatest threat to BIF solvency. The median credit rating of 126 bank holding companies with a combined $2.3 trillion in assets was triple-A in 1980, double-A in 1985, but only A in 1990. In 1989, there were 49 commercial banks with assets over $1 billion that lost a total of $7.5 billion. Several of the largest banks again recorded large loan losses in 1990. Within the group is a small number that some analysts say are at the brink of insolvency. Meanwhile, the average smaller bank has been able to increase its capitalization and increase its loss reserves as a proportion to its noncurrent loans.

The Nation's 479 savings banks, a group mainly located in the Northeast and specializing in real estate lending, hold about 10 percent of BIF-insured deposits. In the first nine months of 1990, 35 percent were unprofitable. The entire group lost $1.2 billion in that period, after a loss of $772 million in 1989. By September, the FDIC had placed 31 of these banks on the problem list.

The difficulty of forecasting whether any one bank will fail and uncertainty regarding economic conditions, make any forecast of the BIF's bank failure costs over the next few years subject to a wide range of error. Even with such uncertainties, given the current economic forecast and competitive conditions within the industry, bank failures and insurance fund losses are likely to remain high for the next few years.

Government's Role

The future strength of depository institutions also depends on Government policy. The Federal Government's large role in defining what these institutions can do and supervising their activities complicates their adjustment to the changing pattern of technology and competition. Firms must react not only to market forces but to Government rules; changes in those rules can be unpredictable.

Government's role as deposit insurer also complicates industry adjustment. It does this by shielding depositors and, to a lesser degree, other creditors from losses in case of failure. By reassuring depositors, deposit insurance also acts as a life support system that permits failing firms to stay in the market longer. In a period when healthy banks and thrifts already are under pressure, extra competition from these sick and dying firms is an added burden.

Flawed Deposit Insurance Policies.—In the absence of deposit insurance, depositors would be inclined to pull their money out of a bank or thrift at the first sign of trouble. However, knowing that they are protected from loss, they are less attentive to such problems. One lesson of the savings and loan debacle is that institutions under pressure take more risks. Those that are failing or insolvent are especially prone to take excessive risks. Once their equity capital is wiped out, they are playing with other people's money. Without market sources of discipline, it is left to Government to control risk-taking by failing firms.

These problems are inherent in deposit insurance. However, the deposit insurance system and regulatory structure that have evolved since the 1930s have serious weaknesses that compound the problem. For example, prudently managed and well-capitalized firms pay the same premiums as poorly run and undercapitalized firms. Deficiencies in accounting practices and supervision sometimes delay the recognition of operating losses. Closure practices often protect uninsured depositors and other creditors, reducing the discipline that these groups might otherwise impose on a troubled institution.

Government has compounded deposit insurance problems by limiting the financial services that banks and thrifts can offer. The losses incurred by thrifts that moved away from mortgage lending are sometimes used to argue the opposite point. However, this "diversification" often occurred when thrifts were already insolvent and their owners were pursuing extremely risky but potentially high-yielding investments. The problem was allowing undercapitalized firms to expand, not the expansion of allowable activities. Adequately capitalized firms undertake diversification to reduce rather than increase risk.

Banks, securities firms, and insurance companies have been forbidden to enter each other's businesses or to affiliate. States have been given authority to determine to what extent bank and thrift ownership and operation can cross State boundaries. Most States, until recently, restricted interstate ownership or branching, making it difficult for depositories to diversify against the risk of regional recessions.

Without fundamental reforms to correct these deficiencies, the deposit insurance system will continue to encourage excessive risk-taking. This will continue to impose an unfair burden on well-run institutions in the form of extra competition for deposits, higher premiums, and restrictive regulation. Until depositories can better diversify their risks and, through affiliation with other firms, offer customers a full range of financial services, they will fail more frequently than is necessary.

Beginning the Cleanup.—The cost of inadequate deposit insurance policy has already been experienced in the savings and loan industry. The cost of cleaning up this disaster was initially underestimated by all concerned. In the past year, estimates have increased partly because more thrifts failed than most observers expected. Real estate markets also deteriorated more than expected, enlarging the volume of assets acquired by the RTC and slowing their resale. The RTC now is expected to take over and dispose of roughly 1,000 institutions.

In the first 13 months of its existence, the RTC disposed of 273 failed institutions with $79 billion in assets. Over $69 billion of assets were sold out of conservatorship, another $7 billion were sold out of receiverships, and $34 billion were passed to acquirers. At the end of September 1990, $142 billion of assets were held by the RTC or remained in conservatorship. This total included $34 billion in delinquent loans and real estate.

Continuing the rapid pace of the cleanup will require action by Congress early in 1991 to provide the RTC additional spending authority. Although the RTC is currently scheduled to stop taking on new cases in August 1992, the Administration proposes to extend this period through the end of FY 1993. The RTC will soon exhaust the $50 billion originally provided by Congress to handle thrift insolvencies. Additional funding will be required in 1991 and 1992 of $30 billion and $33 billion, respectively. Failure to provide such additional funding quickly will slow the pace of closures during the second quarter of 1991. If such a delay were to extend over several months, it could increase the eventual cost of the cleanup by about $2 billion.

Assuming Congress provides the additional funding RTC needs by February 1991, the budget estimates net outlays of RTC to be $85 billion in 1991 and $76 billion in 1992. These outlay estimates assume RTC is able to continue, without interruption, its current pace of resolving insolvent thrifts. The estimates include "working capital" expenditures (net) of about $47 billion in 1991 and $43 billion in 1992. These "working capital" expenditures reflect RTC's costs of acquiring and holding assets temporarily until they can be sold.

RTC net outlay estimates remain volatile. If additional loss funds are not provided quickly, 1991 outlays will be less and 1992 outlays will be higher than currently projected, since RTC will resolve fewer cases (and acquire fewer assets) in 1991. RTC's net outlay estimates also depend upon underlying economic assumptions. For example, a more protracted recession could increase the number of assets RTC will have to acquire to resolve insolvent thrifts and could impede RTC's ability to sell assets consistent with its current plans.

Total cumulative RTC net outlays between 1991 and 1996 are estimated to be $70 billion, given current Administration economic assumptions. Under more adverse economic assumptions, these cumulative RTC outlays could be $13 billion higher.

Condition of the Insurance Funds.—Five years ago, the FDIC's bank insurance reserves were $19.5 billion and equalled 1.33 percent of the industry's insured deposits. On September 30, 1990, BIF reserves were $10.5 billion, equal to 0.52 percent of insured deposits. Reserves are now expected to fall by another $6 billion in 1991, assuming a moderate recession. In 1992, unless additional funds are obtained, reserves will be exhausted.

In addition to the BIF, the FDIC administers the separate, new SAIF insurance fund. The SAIF will deal with thrifts that fail after September 30, 1993, assuming the proposed extension of the RTC. By then, it will have a net worth of $1.6 billion. This should be adequate for the reduced level of insured losses that will prevail once the current backlog is eliminated and the Administration's reforms are in place.

Credit unions are insured through the National Credit Union Share Insurance Fund (NCUSIF). It now has reserves of $2.1 billion. Credit unions have been permitted to carry their contribution of one percent of deposits to these reserves as an asset. This year, as in recent years, insured losses are expected to be paid out of current revenues, primarily interest on the reserve balance. This will permit the ratio of fund reserves to insured deposits to remain at the targeted 1.25 percent. Nevertheless, insured losses are expected to increase in the next 2 years, requiring close attention to the condition of the fund. Many credit unions are vulnerable to recession because their members are often drawn from a single industry or firm and because their assets are mostly consumer loans. Liabilities will expand as a result of the Rhode Island private deposit insurance fund failure.

Banks currently pay a premium rate on deposits of 19.5 basis points; however, it is anticipated that the FDIC will increase the rate to 23 basis points in June 1991 as required to bolster BIF reserves. Thrifts pay a premium rate of 23.5 basis points. Credit unions have contributed one percent of their assets to a joint fund and may be assessed in the future if necessary to replenish and maintain this reserve.

Additional Resources for the Bank Insurance Fund.—Until reforms reduce deposit insurance losses, the FDIC must be assured of the resources needed to deal with the anticipated number of bank failures. The alternative is a backlog of insolvent but still open institutions. The experience of allowing a backlog of insolvent thrifts to develop as a result of inadequate funding demonstrates the substantial costs of delay in dealing with failure.

The Administration forecasts that, without action to recapitalize the BIF, its net worth will become negative in 1992 and continue to decline through 1996. As described in the Treasury Department's proposal for deposit insurance and financial services reforms, the Administration is proposing major reforms to the Federal deposit insurance system and principles governing the recapitalization of the BIF to restore it to a positive net worth position. By 1994, it is anticipated that deposit insurance reforms and the new regulatory structure of financial services will begin to improve industry profits. The resulting reduction in insurance losses will make it possible to begin rebuilding BIF reserves.

Additional funding is not by itself a sufficient response to the problems of the BIF. If more comprehensive reforms are not enacted it may be nearly impossible to restore BIF reserves to a prudent level.

The Administration's Proposals

The deposit insurance system we now have imposes an unacceptable and unnecessary burden on depository institutions, taxpayers, and the economy. That cost can be reduced to an acceptable level only by giving banks, thrifts, and credit unions the opportunity to operate safely and profitably without extending the deposit insurance safety net.

The task of reform is two-sided. On the one hand, exploitation of deposit insurance to subsidize excessively risky activities must be controlled. On the other hand, new opportunities must be provided for depositories to diversify their risks and capture the efficiencies of affiliation with other financial services. In this way, over a period of time, a "virtuous cycle" can be created through which capital and rewards flow away from those activities that depend solely on the deposit insurance safety net to those which the marketplace will support. The Administration's reform proposals are balanced to achieve this result, and are presented independently in the Treasury study.

Toward Improved Budgeting for Deposit Insurance

Federal budgeting conventions may have obscured the development of problems in the deposit insurance system at a time when reforms could have reduced future spending. A sound principle of budgetary accounting is that costs should be recorded when they are incurred. Otherwise, decisions are distorted by false readings of their cost impacts.

This long-standing problem has been corrected for Federal credit programs through a budgetary reform described later in this chapter. In 1991, both OMB and CBO will explore whether it is appropriate and practical to apply the principles of credit reform to deposit insurance and other Government insurance programs.

The subsidy conveyed by deposit insurance rises with the number of weak and undercapitalized firms; when policies widen the safety net to protect stockholders, uninsured depositors, or creditors; or when delay in recognizing and dealing with insolvency adds to losses. Conversely, it falls as policies are put in place that effectively limit risk-taking with insured funds or that increase firms' ability to earn healthy returns without excessive risks.

Proper measurement of deposit insurance subsidies over the last decade would have shown that thrifts and banks were depending more heavily on deposit insurance guarantees. Without them, firms would quickly have lost

Table A–5. **BIF NET WORTH—NO RECAPITALIZATION/REFORMS**

(In billions of dollars)

	1991	1992	1993	1994	1995	1996
Net Worth	4.4	–2.2	–9.1	–15.3	–19.3	–22.2

Note: The Administration forecasts that without action to recapitalize the Bank Insurance Fund (BIF), its net worth will become negative in 1992 and continue to decline through 1996. These estimates of negative BIF net worth could only develop if Section 15 (c)(5) of the Federal Deposit Insurance Act did not apply.

the ability to fund themselves and continue to operate. The costs of deposit insurance thus would have been shown to be growing at an alarming rate at a time when fund reserves were still substantial. Recording this increase in exposure as part of the budget might have encouraged more timely action to reform the system and limit losses.

If further study shows that changes in the deposit insurance subsidy can be conceptually identified and estimated with enough accuracy, a recommendation may be considered to record them as an increased cost when they are incurred, rather than when they are paid.

PENSION TERMINATION INSURANCE

The Pension Benefit Guaranty Corporation (PBGC) guarantees payment of retirement pensions when private sector defined-benefit pensions terminate, usually in bankruptcy, without sufficient assets to pay promised benefits. Separate insurance programs with different features cover the two main types of pensions: (1) single employer pensions that are sponsored by individual firms; and (2) multiemployer pensions to which several companies in the same industry may contribute. The single employer program dominates the finances of the PBGC.

Risk.—The present value of benefits that are promised in all single employer pension plans insured by the PBGC exceeds $800 billion. These promises are covered by pension assets currently totalling $1 trillion. Although the overall funding of defined benefit pensions is generally good, about $20 to $30 billion of unfunded liabilities are in substantially underfunded plans.

Underfunded pensions do not necessarily pose risk to the insurance program. Risk is due to financial problems in firms that have underfunded pensions. A rather small number of pensions account for most of the risk to the PBGC. About $8 billion of the total underfunding is in pensions of financially strained firms that are likely to become bankrupt if their business conditions deteriorate enough.

If the conditions of the last few years continue over the next thirty years, PBGC's deficit is likely to climb to $6 billion; under more pessimistic assumptions, the PBGC's deficit could reach $20 billion (both in 1991 dollars).

Some firms persist in underfunding their pensions. This practice is concentrated mainly in the steel, automobile, and airline industries. Most underfunding is legal and reflects company use of pension funding methods currently allowed in the law and Treasury regulations or that were allowed in the past. PBGC insurance is particularly beneficial for such firms.

Premiums.—All sponsors of single employer, defined benefit pensions must pay a flat rate per capita annual premium to the PBGC. In addition, underfunded plans also are required to pay a variable rate premium related to the PBGC's loss exposure.

In OBRA, Congress increased PBGC premiums from an average of $19 to $23. The flat rate premium was increased from $16 to $19 per covered worker. The variable rate premium, paid by employers whose plans are underfunded, was increased from $6 to $9 per $1,000 of unfunded vested liability. The maximum on the variable rate premium was raised from $34 to $53. The portion of total premiums raised from the variable portion, 17 percent, stayed about the same as before.

These increases give the PBGC additional current resources and should provide a positive cash flow past the end of the century. However, the conditions that could lead to even higher PBGC deficits—underfunded pensions in financially weak firms—have not yet been changed. The PBGC's long-term deficit can be expected to grow unless the program can increase its recoveries from companies terminating underfunded plans or can increase its premiums, particularly the variable one, further.

Bankruptcy and Unfunded Claims.—The PBGC makes claims against firms that are bankrupt and are terminating their pension plans. The claim is for amounts of pension underfunding and for current, unpaid pension contributions. The PBGC's low priority in bankruptcy proceedings often results in low recoveries, delays in recovering assets, and an enlargement of the PBGC deficit. Moreover, the PBGC usually has limited information because it is not on creditors' committees in bankruptcy proceedings.

PBGC's losses from terminating plans can be increased because of subsidized early retirement benefits, called shutdown benefits, which become payable when operations are closed. They are common in collectively bargained pensions in the manufacturing sector, but are not normally funded in advance because the triggering events cannot be predicted. In financially ailing firms, such contingent benefits can use up pension assets before bankruptcy and pension termination, thereby shifting the financing burden onto the PBGC. PBGC's losses increase because it cannot recover the higher claims from bankrupt firms.

The risk of large increases in the PBGC deficit can be reduced by legislation to achieve policy goals already proposed in the 1991 budget, but not yet enacted. These measures would strengthen company incentives to fund pensions and further reduce PBGC's exposure to loss. The Administration will propose legislation to clarify and improve the status of PBGC claims in bankruptcy, to revise the legal treatment of shutdown benefits, to give the PBGC the option of becoming a member of creditors' committees, and to further tighten the regulations for interest rates used to determine company contributions to underfunded pensions.

OTHER FEDERAL INSURANCE

The Federal Government operates insurance plans to protect against other types of risk. Two of them offer disaster insurance, which is not readily available elsewhere; and some offer insurance or indemnification in response to some service in the Nation's interest.

Disaster Insurance

Disaster insurance has two problems that tend to increase losses. The first problem stems from the widely held perception that the Federal Government will grant disaster relief whether people are insured or not. Those who believe they will be reimbursed for disaster without paying for insurance will not buy coverage voluntarily even when it is subsidized. The second problem, common to any insurance, is the tendency of those protected to undertake more risky behavior. This is especially a problem when insurance premiums are subsidized.

Federal Crop Insurance.—Federal Crop Insurance illustrates the difficulty in selling disaster insurance, even when heavily subsidized. Federal crop insurance was expanded in 1980 to protect farmers from the risk of crop loss and obviate the need for disaster relief. The program is in need of serious reform.

Only one-third of eligible commodity production has been insured, despite the fact that subsidies cover about two-thirds of total program costs, including premiums, administration, and excess losses. Yet even with a subsidy of roughly $1 billion per year, disaster relief bills costing $7 billion were enacted in 1983, 1986, 1988, and 1989.

The "pay as you go" provisions of OBRA may reduce the redundancy between federally subsidized crop insurance and ad hoc disaster relief, because all future relief bills must include offsetting reductions in other programs. This includes those enacted by supplemental appropriation, unless such relief is granted in response to a Presidentially declared "dire emergency." In the past, including the period covered by the Gramm-Rudman-Hollings law, most supplemental appropriation spending was not offset. Thus, there is reason to believe that, in the future, ad hoc disaster relief bills will be somewhat less frequent and, when available, less generous than in the past.

Crop insurance reform is nevertheless needed. Administrative expenses are high, ranging between one-quarter and one-half of all program outlays. Further, the program remains somewhat vulnerable to mismanagement. Most importantly, the premiums have not been set on an actuarially sound basis—even with some subsidy in the premium assumed. Excessively low premiums consitute a hidden subsidy beyond even that which was intended for the program.

Two approaches will be used in an attempt to address these problems. First, the Administration will aggressively use the new authorities provided in the 1990 farm bill to correct both management and actuarial problems, including, where possible, the use of area yields to reduce administrative costs. Second, legislation is being proposed by the Administration to price insurance policies closer to their full cost, lowering Federal premium subsidies from 30 percent to 15 percent of the policy's cost.

The new premiums will tend to be higher, though some low-risk producers will pay less than they do now.

Federal Flood Insurance.—The availability of insurance against flood losses without accompanying flood hazard reduction activities can encourage unwise development of flood plains. Federal flood insurance is therefore available only to individuals who live in communities that adopt and enforce appropriate land use and building standards. This includes virtually all communities at risk of large flood losses. In 1991, the Federal Emergency Management Agency (FEMA) will continue implementation of a new premium system that strengthens incentives for communities to undertake measures beyond the minimum Federal requirements to reduce the risk of flood damage.

The General Accounting Office, in reviewing Federal disaster programs concluded, "Insurance is the most efficient and equitable method of providing disaster assistance ... (TAD–80–39)." Federal disaster assistance, provided only in Presidentially declared disasters, cannot reliably substitute for insurance. However, recipients of FEMA's means-tested individual disaster assistance grants frequently cite the inability to afford premiums as the reason for not carrying flood insurance. This is despite the availability of subsidized flood insurance for structures built before identification of the flood risk.

The National Flood Insurance Program currently generates sufficient annual income to cover the equivalent of the average historical loss year. However, the fund is not actuarially sound over the long term because of the statutorily subsidized portion of the business. If loss reserves and premium income are insufficient to meet program losses and expenses, the fund can borrow up to $1 billion from the Treasury. In 1991, there is an estimated 40 to 50 percent chance that the fund's loss reserves, together with anticipated premium income for the year, will not be adequate to meet losses. FEMA estimates that if the fund were to be capitalized for a 10-year period without any borrowing authority, a reserve of $3 billion to $5 billion would be needed to assure that the fund could satisfy policyholder claims with only a 5 to 10 percent chance that its resources would not be adequate.

National Interest Insurance

VA Life Insurance.—VA has eight life insurance programs designed to help veterans and servicepersons who have difficulty obtaining affordable life insurance in the private sector as a result of combat risks or health problems associated with their military service. Six of the eight programs are actuarially sound. The largest, the Serviceman's Group Life Insurance (SGLI), is completely self-supporting in peacetime, but receives $50,000 per combat-related death from appropriations. Two programs have unfunded liabilities: the Service-Disabled Veterans Insurance (SDVI) and the Veterans Mortgage Life Insurance (VMLI). They provide insurance to service-connected disabled veterans at premiums appropriate for healthy people or, in the case of totally and permanently disabled veterans, free. The difference is made up by an appropriation proposed to be $25 million in 1992.

War-Risk Indemnification.—The Government insures and indemnifies air and maritime carriers in case of loss from the operation of their aircraft or ships during a war or national emergency. For aviation war risk insurance, claims paid under the program since its inception have been only $151,000. However, with the Middle East crisis, the number of aircraft covered by the program has increased to 569, from 408 in 1989, and their values have been updated—in combination more than doubling the face value of the insurance outstanding. A smaller program of maritime war risk insurance now covers more than 1,000 vessels ranging from oil tankers to barges. It includes the hull value of both the U.S. commercial fleet and foreign-flag vessels under contract with the U.S. Government.

Overseas Private Investment Corporation.—OPIC provides political risk insurance against losses caused by inconvertibility of currency, expropriation, and political violence for foreign direct investment by U.S. corporations. At the end of 1990, $3.3 billion of insurance was outstanding, with reserves at 30 percent of this amount. OPIC limits its exposure in any given project (which rarely exceeds $100 million), and also spreads its risk geographically, so that typically no more than 10 percent of its total insurance portfolio is at risk in any single country.

The private market for political risk investment insurance is limited. In the U.S., there are only a handful of private insurers. Many investors seek coverage through Lloyd's of London. OPIC has counterpart agencies among other OECD countries, which also insure investments by their respective nationals against political risks. The volume of risks insured by these agencies tends to be smaller than OPIC. In recent years, premium income for these counterparts has exceeded losses.

Vaccine Injury Compensation.—The National Childhood Vaccine Act of 1986 created the Vaccine Improvement Program (VIP) to adjudicate and pay compensation for vaccine-related injury or death. Successful pre-October 1, 1988, claims are covered by limited appropriations from the general fund. Successful post-October 1, 1988, claims are paid from a trust fund financed by an excise tax levied on each dose of covered vaccine sold in the United States. Awards are made on a no-fault basis for all vaccines specified in the Act; no finding of negligence is necessary. Federal payment of claims gives vaccine manufacturers partial relief from liability.

A total of 3,060 pre-October 1, 1988, claims were filed before the original October 1, 1990, filing deadline. This far exceeded the original projection. In addition, P.L. 101–502 extended the filing deadline by four months. Preliminary estimates indicate that total awards for pre-October 1, 1988, claims could be as high as $3 billion. Expected Federal payments for pre-October 1, 1988, awards is limited, since only $80 million annually in Federal payments is now authorized. Federal payments could be much higher if the annual authorization level were raised.

OTHER "SAFETY NETS"

The Government's overall responsibility for the Nation's economic well-being may quickly enlarge its commitments when unpredictable events occur. Thus, when private "safety nets" fail, such as when private or State-sponsored deposit insurance plans for thrifts or credit unions in Ohio, Maryland, and most recently Rhode Island came under stress, Federal regulators helped to resolve the crises and took many of the former members under Federal deposit insurance.

The Federal Government monitors the strength and safety of all financial sectors. Some of the changes that have put depository institutions under pressure also are affecting the securities and insurance industries. In these cases, the first lines of defense against potential risk are the capital of individual firms and the safety nets created either by the industry or State governments.

Securities Investor Protection Corporation

Unlike depositors, investors in securities are not protected by a Government fund. However, customers of securities firms are protected by an industry-sponsored fund of the Securities Investor Protection Corporation (SIPC). This fund insures them against losses of cash and securities up to $500,000 when a broker-dealer fails. Most broker-dealers in the general securities business are required to be members of SIPC.

As of December 1990, the SIPC fund had reserves of $568 million. Additional financial support is available through a $500 million line of credit with a consortium of banks. SIPC may also borrow up to $1 billion from the Treasury through the SEC. Neither line of credit has ever been used.

A recent study by a major accounting firm projects that, in a worst case scenario of the failure of one of the largest SIPC members, the maximum cost to SIPC would be about $1.2 billion. This figure, however, is subject to revision since market values change too rapidly for SIPC to give a continually updated estimate of its coverage. The study concluded that the current SIPC fund appears to be adequate to manage a major failure. However, several trends in the securities industry may pose new threats. They include an eleven-fold increase in U.S. trading in the past two decades, the development of complex products and new markets, and increased concentration of securities industry capital in the top 25 firms.

The Insurance Industry

Policyholders of insurance firms are also not federally insured. Instead, a system of industry-financed State guarantee funds pays claims on failed firms. The safety net of the guarantee funds is not complete. Many funds have maximum payouts and exclude out-of-State policyholders.

Two parts of the insurance industry—life and health insurers, and property and casualty insurers—have, for different reasons, been under increasing financial strain. In an era of financial deregulation, life and health companies have faced intensified competition from other saving vehicles, and have invested in assets which are now eroding in value. Property and casualty companies were hurt over the past decade by large increases in claims, particularly for product and professional damages, that they had not anticipated in setting their premiums.

The McCarran-Ferguson Act of 1945 authorized States to charter insurance companies, set the standards, and supervise their enforcement. There is wide variation across States in the stringency of standards, the resources available to regulators, and the depth of their oversight.

Life and Health Insurers.—As inflation and interest rates rose in the late 1970s, life insurance, with slow-growing cash value, was no longer competitive. In response, the industry developed new products that were primarily investment-oriented, rather than insurance-oriented. These products had much higher cash values and their earnings often were tied to frequently changing market rates.

The new products helped life insurers capture part of the growing market for retirement savings. But direct competition with banks, thrifts, brokers, and mutual funds trimmed profit margins. In addition, the variable-rate feature of many products increased interest rate risk for insurers by creating a greater potential for mismatching the return on assets and liabilities.

The shift from pure insurance to an intensely competitive investment focus increased the incentive for insurance firms to move into more risky investments. As profit margins declined, the industry's average ratio of capital and surplus to assets declined—from 8.4 percent in 1970 to 6.4 percent in 1989. On a risk-adjusted basis, the capital ratio has deteriorated still more.

More life and health insurers are failing than in past decades. From 1985 to 1989, 96 firms failed, 43 in 1989 alone. Most were small, so their drain on the State guarantee funds has not been much of a burden on the industry. The 1989 record assessment of insurers to cover policyholders of failed companies was only $161 million; the total for 1985–89 was $366 million.

The quality of insurers' assets is one indicator of the potential for future insolvencies. The 200 largest life insurance companies hold 4.6 percent of their assets in below-investment-grade bonds. For a few companies, the share is much higher. The collapse of junk bond prices and market liquidity has put these firms under strain, making them vulnerable to soaring redemptions that could turn their long-term liabilities into short-term ones.

A broader problem is potential losses on the mortgages and real estate that comprise nearly one-quarter of industry assets. In general, these insurers have avoided the construction and development lending that proved so dangerous to thrifts. But even for established properties, mortgage delinquencies are on the rise, and property values are falling in many markets, especially on the east and west coasts. Insurers that have invested heavily in these in the past few years could find themselves with a poorly performing portfolio.

Property and Casualty Insurers.—In 1989, the property and casualty industry suffered huge losses from Hurricane Hugo ($4 billion) and the California earthquake ($600 million). These culminated a decade of underwriting losses. Throughout this period, courts have increased the scope and size of liability judgments, and claims have continually outpaced premiums that were based on the lower claims experience of prior years.

The increases in product and professional liability have been substantial and unexpected. Claims for product damages, from asbestos to the Dalkon Shield, have been numerous and costly. Business pollution coverage claims were increased by court rulings that insurers are responsible for the cleanup costs resulting from their clients' years of dumping hazardous wastes. Professional liability claims for doctors' and hospitals' medical malpractice policies surged during the 1980s. Directors and officers insurance and professional liability policies have made property and casualty insurers liable for the wrongful actions of directors, accountants, and lawyers involved in failed thrifts and other firms.

Starting in the late-1960s, State regulators increasingly allowed market forces to set rates through price competition. Despite competition, rising claims costs pushed up premiums. By the mid-1980s, rates were soaring and coverage was more difficult to obtain. In this environment, many businesses and municipalities decided to self-insure. By the end of the decade, self-insurance comprised about 30 percent of the market, leaving property and casualty insurers on average with a riskier book of business. Concurrently, consumers' groups resisted premium increases, particularly for automobile insurance, and some jurisdictions obtained restraining legislation.

These pressures squeezed the profits of many property and casualty companies and eventually triggered insolvencies—a rare occurrence in the 1970s. From 1985 through 1989, 90 firms failed—some quite large. In 1989 alone, 23 firms folded. Assessments on the industry by State guarantee funds totaled a record $772 million in 1989, and nearly $3 billion over the five years 1985–89.

Policy Considerations.—The Federal Government has no legal liability to policyholders of failed insurance companies. It is, however, concerned with maintaining a healthy financial sector.

Some have proposed strengthening the State-based regulatory system by improving the quality of information and giving the regulators more resources and powers. Some would place limits on high-risk investments, raise reserve requirements for riskier assets, and tighten accounting rules.

FEDERAL CREDIT AND GOVERNMENT-SPONSORED ENTERPRISES

Credit and GSE Highlights

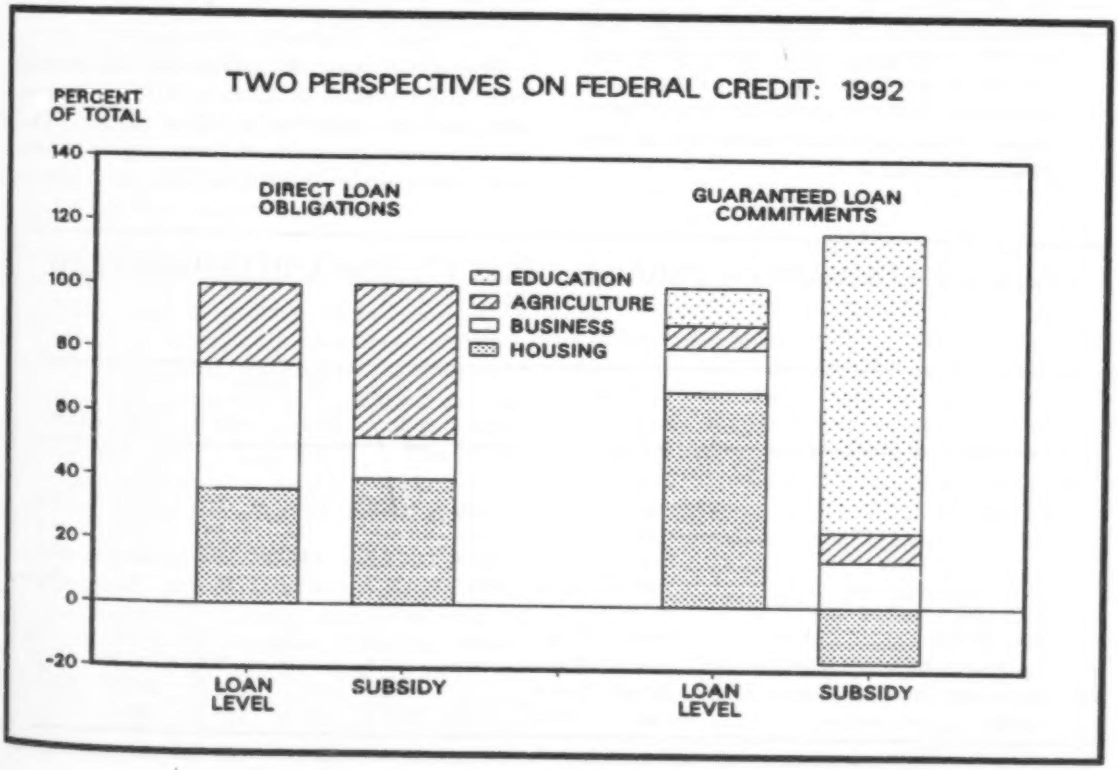
The Government subsidizes and has assumed at least some risk for an enormous volume of credit. Federal subsidies shift credit toward favored sectors—especially housing, education, and agriculture.

- In the three months since credit reform was enacted, explicit subsidy estimates have been developed for all Federal credit programs. Preparations are underway to enable agencies to control lending by the availability of subsidy budget authority. Those plans include improvements in data to upgrade the subsidy estimates and related improvements in loan origination and monitoring.
- GSEs are the most rapidly growing purveyors of federally assisted credit and a dynamic force in the trend toward securitization. GSEs have symbiotic relationships with Federal credit programs. They securitize guaranteed mortgages and student loans, and are also assisted when Federal programs serve as a lender of last resort. While most GSEs can survive considerable economic stress, the Farm Credit System and the FHLB system could benefit from immediate further policy review.
- Housing credit programs, GSEs, and deposit insurance support 83 percent of all home mortgages. The Federal National Mortgage Association (Fannie Mae) and the Federal Home Loan Mortgage Corporation (Freddie Mac) survive a stress test similar to those imposed by private credit rating agencies so long as current policies are continued. The FHA single-family program was substantially reformed last year. The FmHA housing programs will continue the reforms started last year, and new proposals are made for

improving the FHA multi-family and VA loan guarantee programs.

- In education, nearly all student loans are federally guaranteed, and 51 percent are financed by the Student Loan Marketing Association (Sallie Mae), a GSE. Sallie Mae has virtually no exposure to economic risk and survives some policy shocks, although it would be affected if the GSL program were reconfigured as direct loans. The reauthorization of the GSL program will include improved incentives for students, schools, and States to reduce excessive defaults and program abuse.
- In agriculture, 73 percent of all farm debt has some form of Federal support. The shift from FmHA direct loans toward loan guarantees enacted as a result of the budget agreement last year will help farmers to establish private credit and reduce Federal costs. Four of the Farm Credit System districts are projected to experience severe financial stress in the 1990s under relatively optimistic scenarios; two others are added under increased economic stress. Proposals are made to strengthen the structure and incentives of the system.
- The Federal role in lending to business is focused on financing exports, rural utilities, and small and minority businesses. For the Rural Electrification Administration (REA) and the Small Business Administration (SBA), the budget proposals continue the shift from direct loans to partial guarantees and reduced interest subsidies.

The Federal Government's credit subsidies shift resources toward favored economic sectors—especially housing, agriculture, and education. Federal credit subsidies are both direct and indirect. Direct subsidies include interest rates below Treasury rates and easier terms on direct loans and guarantees of private loans than necessary to absorb defaults and other costs. Indirect subsidies include implicit Federal backing for Government-sponsored enterprises, which lowers their cost of funds. By pricing credit below cost, the Government subsidizes borrowers and incurs costs to expand the amount of credit to particular types of borrowers.



TWO PERSPECTIVES ON FEDERAL CREDIT: 1992

In analyzing Federal credit programs, it is important to distinguish the value of the subsidy provided from the total amount (volume) of credit. For example, Federal direct loans account for only 13 percent of new Federal credit extensions but 32 percent of the subsidy provided. This is because the average subsidy rate on direct loans is 17.9 percent, compared with 2.5 percent on guarantees. The difference shows up most dramatically when comparing the composition of guaranteed loan volume and the value of subsidies. Housing accounts for two-thirds of the volume of new guarantees in 1992, but because of the FHA reforms enacted in OBRA, none of the subsidy. In contrast, education accounts for 12 percent of the volume, but 94 percent of the subsidy.

The Government has assisted and assumed some risk on an enormous volume of credit. At the end of 1990:

- In housing, $1,232 billion or 42 percent of outstanding home mortgages had been guaranteed by Federal agencies or securitized by GSEs. Another $1,214 billion or 41 percent (not including securitized loans) was held by banks and thrifts with deposit insurance; thrifts also receive advances from the Federal Home Loan Banks, a GSE. Thus, of all home mortgages, 83 percent had explicit or implicit Federal support.
- In education, nearly all student loans are federally guaranteed. Furthermore, Sallie Mae, a GSE, financed $28 billion, or 51 percent, of the guaranteed student loans outstanding.
- In agriculture, the Farmers Home Administration accounted for $15 billion or 11 percent of all farm debt outstanding. The Farm Credit System financed another $37 billion or 27 percent, and commercial banks financed 35 percent, backed by deposit insurance and soon by Farmer Mac, a GSE. In total, 73 percent of all farm debt had Federal support.
- Business was also assisted by $103 billion of Government credit. The Federal role is focused on exports, rural utilities, and small and minority businesses.

In 1992, the total volume of Federal loans, guarantees, and GSE credit is expected to reach $1,695 billion. Total Federal subsidies, which take into account the present value of expected future defaults, are estimated to be $1.2 billion for direct loan obligations in 1992 and $2.9 billion for the much larger loan guarantee commitments.

New direct loan obligations fell 39 percent from $27.2 billion in 1988 to $16.7 billion in 1990, and are projected to fall in 1992 to $14.7 billion. New guaranteed loan commitments have risen from $100.7 billion in 1988 to

Table A–6. **SUMMARY OF FEDERAL DIRECT LOANS AND GUARANTEED LOANS**

(In billions of dollars)

	Actual		Estimated					
	1989	1990	1991	1992	1993	1994	1995	1996
Direct Loans:								
Subsidy BA	n/a	n/a	n/a	1.2	1.0	1.1	0.9	0.9
Subsidy Outlays	n/a	n/a	n/a	0.7	0.8	1.0	1.0	1.0

Guaranteed Loans:								
Subsidy BA	n/a	n/a	n/a	2.9	2.5	2.6	2.7	2.8
Subsidy Outlays	n/a	n/a	n/a	1.5	1.9	2.0	2.1	2.2
Guarantee Commitments	105.4	108.9	119.0	115.7	117.0	118.9	120.9	122.5
Lender Disbursements	96.3	99.3	102.9	102.4	103.8	105.9	108.3	110.1

$108.9 billion in 1990, an 8 percent increase. This trend is projected continue through 1992 when volume should reach $115.7 billion.

Loans to agriculture are the largest single component of direct loans. They have fallen from $14.5 billion in 1988 to $7.0 billion for 1990. Housing guaranteed loan volume was $62.9 billion in 1990, rising 17 percent since 1988. VA guaranteed loans have risen 8 percent over the past few years but may fall slightly in the next year or two. Guaranteed student loans have risen about 5 percent from $11.8 billion in 1988 to $12.4 billion in 1990, and are projected to rise further to $13.3 billion in 1992.

Tables A–12, A–13, and A–14 at the end of this Chapter provide detailed information on direct loans, guaranteed loans, and GSE lending and borrowing.

CREDIT REFORM

In the private sector, loans are not made unless the lender expects—at the time the loan is made—that the present value of repayments, interest, and fees is at least as large as the disbursement. Similarly, loans are not guaranteed unless the guarantor believes that fees received will at least cover future costs. Later events may favor either the borrower or the lender, but at the time of the initial transaction, the belief is that instruments of equal value are being exchanged.

For Federal direct loan and loan guarantee programs, that is often not the case. Federal programs exist to provide benefits to certain borrowers or to channel additional resources to certain sectors. Sometimes the Government's large scale and sovereign powers enable it to provide such advantages without out-of-pocket cost. But in most cases, Federal credit programs provide loans or guarantees that are expected to result in a loss to the Government.

In such cases, a subsidy cost and a loan or guarantee are combined in a single transaction. Federal budgeting and accounting in the past failed to recognize this dual nature of credit programs. As far back as 1967, the President's Commission on Budget Concepts recommended that the grant or subsidy cost of direct loans be recorded as an expenditure and the unsubsidized portion be recorded separately as a loan.

A Significant Budget Agreement Accomplishment.—In the Federal Credit Reform Act of 1990, part of OBRA, the Congress has officially recognized the future losses embodied in Federal credit programs. The new law places the cost of credit programs on a budgetary basis equivalent to other Federal spending. These expected costs—a measure of the credit subsidy—will be included in the outlays of the program, the agency, and the function that conduct the credit program. The remaining, unsubsidized cash flows will be recorded in separate financing accounts.[1] In this way, the effect of credit programs on total budget outlays and the budget deficit will be determined by the amount of the subsidy cost.

The new law requires that budget authority be available to cover the subsidy cost of all Federal direct loans and all loan guarantees when they are made. For most programs, these are annual appropriations of specific amounts that lapse at the end of the year. For the few credit entitlements, like VA guarantees and guaranteed student loans, there will be current, indefinite appropriations constrained by provisions of the authorizing law.

Better Incentives.—This change in budgetary accounting and control will improve the incentives to make good program decisions. The full cost will be recorded when the decision is made. Previously, at the time of decision the budget overstated the full cost of direct loans and understated the cost of guaranteed loans. Credit reform will improve the incentives for allocating resources among programs, and in choosing whether to provide assistance by a direct loan, a loan guarantee, or another method. Because the long-run cost is recognized initially, it will also improve the incentive to reduce defaults by better structured programs, and by more effective underwriting, servicing, and collection.

How will these subsidy costs be calculated? Essentially, they are the difference between the present value of the expected cash outflows from the Government and the present value of the expected cash inflows, each discounted

---

[1] The nonsubsidized cash flows will be a means of financing the budget deficit, as explained in Chapter VIII.C.

by the interest rate on marketable Treasury securities of like maturity at the time of loan disbursement.

The word "expected" is important. It covers not only the cash flows specified in the loan or guarantee contract, but also the likely deviations from it. The 1992 budget estimates are based on available historical experience. They incorporate analysis of what causes deviations from contract, and, in particular, how deviations relate to what is known or controllable when the loan is made. The estimates take into account characteristics of the loan or the borrower that make default more likely, and the degree to which policies or economic conditions influence that probability.

For implementation, much more knowledge is necessary. No loan or guarantee can be made unless unobligated subsidy appropriations are available. Each loan or guarantee must be placed into a relatively homogeneous risk category defined by its default probability

and other likely costs. The actual experience—the delinquencies, defaults, prepayments, and modifications—of the loans in each of these risk categories for each origination cohort must be tracked.

Such tracking is necessary in order to assure that subsidy appropriations are adequate to pay the long-term costs of the intended activities. Tracking is also needed because the subsidies for each origination cohort will be reestimated in the budget each year.

Two Regimes.—Credit reform creates two "regimes." Under the old regime are direct loans and loan guarantees that were obligated or committed in 1991 or prior years. They will continue to be recorded on a cash basis as they have been in the past. In most cases, they will remain in their existing "liquidating accounts." New obligations or commitments will not be made from them in 1992 or thereafter. These liquidating accounts will have permanent, indefinite budget authority to pay for losses, and to repay any previous Treasury borrowing. If a direct loan or a guarantee made under the old regime is modified, a subsidy appropriation will be required and a subsidy outlay recorded.

The new regime will start in 1992. Each credit program will have a "program account" for subsidy appropriations and administrative expenses. There will also be a counterpart "financing account" for each program—or two, if the program makes both direct loans and loan guarantees—which will display the cash-flows of the credit activity.

When a direct loan is made, the subsidy will be disbursed from the program account to the program's direct loan financing account. That will count as an outlay from the standpoint of the agency. Since the financing account records only financing transactions, it is not included in the budget totals; thus, the subsidy payment will also count as an outlay from the standpoint of the Federal budget as a whole. The financing account will borrow the unsubsidized amount of the loan from Treasury, and disburse this together with the subsidy as a direct loan. All repayments, interest, fees, and other income will be paid to the financing account, which will repay its debt to Treasury with interest as the loan is scheduled to be repaid. If the subsidy is correct, the financing account will come out even over the life of the loan. If not, the subsidy will be reestimated, and a further payment made by the program account to the financing account.

When a guaranteed loan is made by the non-Federal lender, the subsidy will be disbursed from the program account to the program's guaranteed loan financing account. That will count as an outlay from the standpoint of the agency and the Federal budget as a whole. The financing account will add to the subsidy the fees which it collects. Together they will constitute a reserve, earning interest from Treasury, against future default claims and other costs. If the subsidy is correct, the financing account will come out even over the life of the loan. If not, the subsidy will be reestimated, and a further payment made by the program account to the financing account.

On October 18, 1990, OMB Bulletin No. 91–02 provided instructions for presenting credit reform in the 1992 budget. OMB is drafting the bulletin and formats for incorporating credit reform into budget execution. OMB and Treasury will modify financial statements to be congruent with these principles.

These three bulletins—for budget formulation, budget execution, and financial statements—set the conceptual framework for the legally required reports. The new Chief Financial Officers Act requires financial officers to produce financial statements in 1991 on "trust funds, revolving funds and commercial type activities"—credit programs prominent among them. In 1992, implementation of credit reform will start. So intense attention will focus on credit programs over the next few years.

Clearly, credit reform is not "just" an accounting change. It is an opportunity to see each program with fresh eyes. Credit reform asks the right questions: Who is being helped? By how much? At what cost? It focuses attention and budgetary decisions on the costs underlying each loan, juxtaposed with the borrowers who benefit from these programs. It provides perspective for both policy analysis and program management.

GOVERNMENT-SPONSORED ENTERPRISES

Government-sponsored enterprises were established and chartered by the Federal Government to perform specific credit functions. They primarily act as financial intermediaries that assist borrowers in housing, education, and agriculture. They borrow in the securities market and lend their borrowed funds for specifically authorized purposes either directly or by purchasing loans originated by private lenders.

The GSEs are privately owned, with one partial exception. Their policies and operations are determined by their boards of directors, which have a majority elected by their private owners. However, they reallocate resources through Federal subsidies to achieve Federal policy objectives. They may also pose a direct or indirect financial risk to the Government. In sum, they are neither wholly governmental nor wholly private.

Government sponsorship has given them various benefits. Their securities can collateralize public deposits and can be held in unlimited amount by most banks and thrifts. They are exempt from SEC registration, and their corporate earnings are exempt from State and local income taxation. They may borrow from the Treasury, largely at Treasury discretion, in amounts ranging up to $4 billion. Because of these specific advantages and their overall Federal sponsorship, the credit market perceives their securities to have an implied Federal guarantee. As a result of all these factors, GSEs borrow at lower interest rates than they would otherwise have to pay.

The President's Commission on Budget Concepts recommended that the Federal budget document show their loans, borrowing, and complete financial statements. These are published in Chapter XIII.C. The Budget Enforcement Act, part of OBRA, requires the budget to include an analysis of the financial condition of the GSEs and the financial exposure that they pose to the Government. This Chapter fulfills that requirement for the Federal Home Loan Banks, the Federal National Mortgage Association and the Federal Home Loan Mortgage Corporation, the Student Loan Marketing Association, and the Farm Credit System.

In general, this assessment concludes that the direct risk to taxpayers from these GSEs is not large. Specific weaknesses were identified for the Farm Credit System, and recommendations made. The circumstances of the Federal Home Loan Banks will require further study in the context of financial services reforms.

These analyses focused primarily on interest rate and credit risk. But GSEs also face managerial and operational risks, and unexpected changes in their environment. They are dynamic businesses, seeking competitive advantage. It is difficult to foresee the effects of such factors for taxpayers. Moreover, GSE activities may have some indirect costs. They interact with Federal credit programs, particularly mortgage and student loan guarantees and FmHA, in ways that have not been thoroughly studied. Their larger effects on financial markets need to be examined. And public policy is also concerned with the efficiency and effectiveness of these subsidies in achieving Federal objectives.

Extending Credit Reform to GSEs.—The Federal Credit Reform Act also required OMB and CBO to study the possibility of extending the principles of credit reform to accounting for Government-sponsored enterprises. Applying credit reform to GSEs would involve very difficult conceptual and measurement issues.

There is a well developed academic literature on modeling default and prepayment behavior to provide a basis for estimating the subsidy for Federal direct and guaranteed loan programs under credit reform. However, where credit is extended by private firms whose operations are supported in part by implicit Government guarantees, it is helpful, but not sufficient, to model the risk of the firm's asset portfolio. The performance and behavior of the firm matter as well. So does the behavior of the Government, and capital market perceptions of the firm's viability and the conditions of the Government's guarantee.

OMB has begun to study the possibility of measuring year-to-year changes in the Government's exposure to losses that could result from the failure of firms operating with the benefit of implicit Government guarantees. If further study shows that this can be done, a recommendation may be made that the costs of these subsidies be recorded in the budget.

HOUSING

The Federal Government supports two systems of housing finance. One is based in part on the mortgage insurance programs of the Federal Housing Administration (FHA) and Department of Veterans Affairs (VA). A secondary market for these and other mortgages has developed under Government sponsorship. The Government National Mortgage Association (Ginnie Mae), part of the Department of Housing and Urban Development (HUD), packages as securities and guarantees timely payment on FHA and VA mortgages. Two GSEs—the Federal National Mortgage Association (Fannie Mae) and the Federal Home

Loan Mortgage Corporation (Freddie Mac)—buy outright conventional mortgages, as well as some FHA and VA mortgages, or package them as guaranteed securities.

The second system of Government support is provided through Federal insurance of deposits in banks and particularly in thrift institutions, which specialize in mortgage lending. The Federal Home Loan Bank system, another GSE, provides additional support by making loans to member thrift institutions.

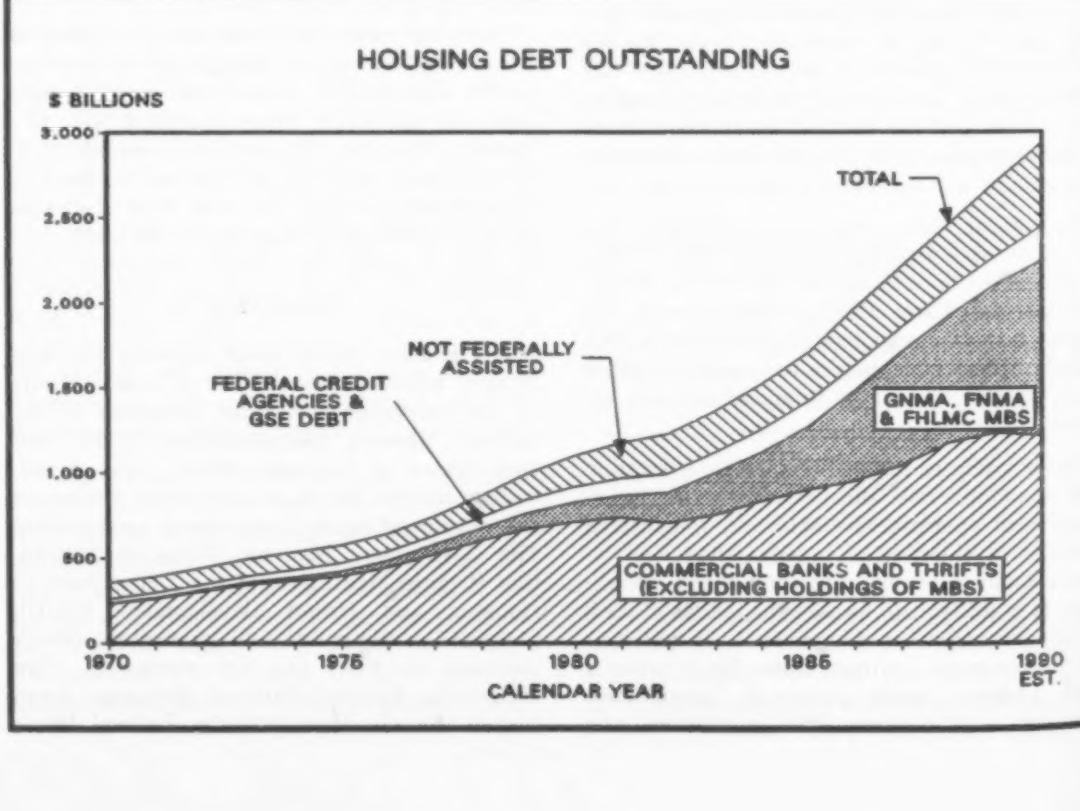
The Government also provides direct loans for rural housing through the Farmers Home Administration (FmHA).

Housing credit, which is usually originated in the private market, nearly always at market interest rates, is generally higher quality than other federally subsidized credit. Credit risk is often held by or shared with the private sector, which improves underwriting standards. Moreover, home owners resist default even when it is in their financial interest. Thus, default rates on mortgages are typically lower than for student loans, farm loans, and business loans. Federal costs accrue primarily from defaults; when that occurs, the collateral backing the loan partly offsets the loss. Default claims are $1 to $2 billion per year—only about 0.1 percent of the amount outstanding; the present value of these future costs ranges from $10 to $15 billion.

Where problems have occurred in housing credit programs, often the borrower's equity was inadequate to withstand stressful economic conditions. At other times, the capitalization of private sector agents was inadequate. The most notable example of the latter is the now-discontinued HUD multi-family co-insurance program.

Risk persists in those programs that encourage home ownership by allowing minimal downpayments—FHA, VA, and FmHA. However, reforms enacted in the past year and proposed for the future have or will improve the effectiveness of each of these programs. Fannie Mae and Freddie Mac are profitable stock-held corporations posing no immediate or obvious threat to taxpayers.

HOUSING DEBT OUTSTANDING



Major reforms of the FHA single-family program enacted last year will cover expected losses from existing and future business under most economic conditions. Administration proposals to make greater use of guarantees and risk-sharing in the FmHA housing programs are testing ways to enhance the performance of the program. VA also proposes to make greater use of its already effective risk-sharing structure, as well as other improvements which can reduce Government cost without impairing veterans' access to home ownership.

Fannie Mae and Freddie Mac

By the end of 1990, Fannie Mae and Freddie Mac had about $700 billion in debt and mortgage-backed securities outstanding. Fannie's capital including loan loss reserves is about $4.2 billion or 1 percent. Fannie Mae has a publicly annunciated short-term capital goal of $6 billion for the end of 1991, which the corporation has stated it will reach. In addition, it has set target capital ratios to assets and mortgage-backed securities outstanding which would have required the corporation to have approximately $4.8 billion on September 30, 1990. Freddie's capital is about $2.6 billion or 0.8 percent. For both corporations, these capital measures are determined by GAAP accounting.

Both Fannie and Freddie have become increasingly profitable in the last few years. They appear not to have the problems of banks and thrifts with rising loan losses and deteriorating income. Under projections of moderate housing appreciation and stable mortgage rates, Fannie and Freddie will be profitable in the future, provided they continue their present policies.

Financial Condition and Taxpayer Exposure.—OBRA requires that the budget evaluate the financial condition of GSEs and potential taxpayer costs. The effects of severe interest rate and credit risk stress on the performance of Fannie Mae and Freddie Mac were analyzed by estimating how they would be affected by a depression scenario similar to that used by rating agencies. It was assumed that housing prices fell 10 percent per year for 4 years, and mortgage rates declined to 5 percent. Under this regime, both Fannie and Freddie survive and return to profitability after the severe downturn. Therefore, taxpayer exposure is close to zero under the above scenario.

This analysis does not incorporate management and operations risks which, particularly in times of severe economic stress, can rapidly increase potential taxpayer exposure. Specifically, the ability of Fannie and Freddie to survive such stress depends on their continuing to: (1) invest primarily in highly collateralized home mortgages; (2) maintain high underwriting standards; and (3) limit interest rate risk.

Subsidy and Taxpayer Cost.—Even though taxpayer exposure is close to zero under the above scenario, a sizable Federal subsidy is transmitted to both corporations. The corporations, in turn, pass much of the subsidy on to borrowers through lower mortgage rates. This subsidy can be measured by comparing the borrowing costs of Fannie and Freddie to those of the safest private corporations, those rated Aa to Aaa. GSE borrowing costs are about 25 to 40 basis points over Treasury securities of comparable maturities, while similarly rated private corporations borrow at 75 to 100 basis points over Treasuries. Thus the subsidy is 35 to 75 basis points. Consistent with this result, studies have found that mortgage rates are 25 to 50 basis points lower because Fannie and Freddie exist in the form and size they do.

The private market discipline of making profits for stockholders, combined with their GSE status, makes Fannie and Freddie as efficient and profitable as they are. This illustrates the importance of market discipline in safeguarding implicit liabilities of the Government.

Taxpayers are safe as long as Fannie and Freddie operate as efficiently, profitably, and safely in the future as they have in the recent past. But this qualification is the reason why effective regulatory oversight is needed in the future. To ensure financial soundness, it is important that regulators avoid steps that would encourage the corporations to engage in unprofitable or excessively risky business. If Fannie or Freddie were to loosen underwriting standards, or invest to a great degree in risky assets, they might not survive severe economic stress. Even under such conditions, however, losses would probably not exceed a few billion dollars on their assets.

FHA Single-Family

The 1991 budget stated that the FHA single-family mortgage insurance fund potentially faced billions of dollars in future losses. Losses on mortgages insured in the 1980s virtually wiped out the surplus that the fund had built up since the 1930s. The fund's reserves had fallen from over 5 percent of outstanding mortgages in 1980 to less than 1 percent in 1989. In addition, each year's new business beginning in 1990 was estimated to lose from $200 to $700 million. To head off these losses, an actuarial study of the program was completed in 1990, and was followed by enactment of major reforms. These reforms are expected to shield taxpayers from losses under most circumstances, while maintaining access to home ownership for people of moderate means.

Sources of Risk.—FHA's troubles developed in part because housing prices rose much more slowly in the 1980s than in the 1970s. Widely fluctuating interest rates added to losses as the high coupon mortgages of the early and mid-1980s defaulted at unprecedented rates when rates fell subsequently. The expected losses on new FHA business reflected a trend towards smaller downpayments, as well as expected continued slow increases in home prices. In recent years, most FHA-insured buyers effectively put down less than five percent of house value. While this demonstrates that FHA offers homeownership opportunities not available in the conventional mortgage market, the riskier nature of these low downpayment loans is precisely why such terms are not available in the private sector.

Progress in Reducing Risk.—Last year, the Administration and Congress considered various options to stabilize the fund's financial position. The objective was to rebuild its reserves to 2 percent of outstanding insurance within 10 years while maintaining the following principles:

- The needs of the low- and moderate-income homebuyers should remain a high priority.
- Insurance premiums should reflect the varying risk of default as the downpayment varies.
- Homebuyers should make enough equity contribution to protect themselves and the insurance fund from excessive risk.

The reforms enacted in the Omnibus Budget Reconciliation Act of 1990 and the National Affordable Housing Act (NAHA) of 1990 meet the goal for reserves and the Administration's principles. The NAHA established four operational goals:

- maintain an adequate capital reserve ratio;
- provide access to mortgage credit for homebuyers with low downpayments and first-time homebuyers;
- minimize the risk to the fund and homeowners from homeowner default; and,
- avoid adverse selection that would cause FHA to insure only the highest-risk buyers.

The two most critical performance measures are the FHA fund's capital reserve ratio (the amount of reserves or equity in the fund balance relative to insurance liabilities outstanding) and homeowner default rates (the percentage of those buying homes in a given year who are expected to default over the time their mortgage insurance is in force). Expected homeowner defaults and FHA's reserve levels are directly related. Lower expected defaults reduce FHA's costs from claim payments and thus allow reserve levels to increase for any given amount of premium income earned. Lowering default rates also protects more owners from the pain of losing their homes.

The expected reduction in defaults is achieved primarily by requiring buyers to have a greater equity interest in their homes. The NAHA reduced the proportion of closing costs that can be financed from 100 percent to 57 percent and eliminated the use of FHA insurance to finance vacation properties. Default rates are projected to decline by almost 6 percent, once the reforms are fully implemented in 1995.

The expected increase in FHA's capital reserve ratio results not only from reduced defaults but also from an increase in insurance premiums. Under prior law, FHA homebuyers paid the premium (3.8 percent of the mortgage) in one, up-front payment. This payment could be financed by adding it to the mortgage. The enacted reforms make two changes:

- The up-front premium is to be reduced gradually to 2.25 percent of the mortgage by 1995. This is intended to reduce the financial burden of purchasing a home for low-income and first-time homebuyers.
- A new annual premium is established, with the amount varying with default risk. This risk-rated premium is intended to reduce possible adverse selection problems that might arise from the increase in FHA premiums. The burden on low-income and first-time homebuyers is minimized by allowing the premium to be paid annually over an extended period.

Once the reforms are fully implemented in 1995, the discounted present value of the up-front and annual premiums together (assuming the buyer pays the annual premium for the entire term of the mortgage) will vary from 5.5 percent of the mortgage for low-risk buyers (those with downpayments of 10 percent or more) to just under 7 percent for high-risk buyers (those with downpayments of less than 5 percent) based on a 30-year mortgage term.

The NAHA reforms also permanently extend the current high-cost area mortgage limits (the lower of $124,875 or 95 percent of the area median house price). By maintaining the current mortgage limits, the NAHA reforms ensure that FHA will continue to focus on the mortgage needs of low-income and first-time homebuyers.

These critical reforms are expected to reverse the financial problems of the FHA single-family insurance program and return the insurance fund to financial soundness. The statute also provides the HUD Secretary flexibility to adjust premiums in order to assure that the FHA fund reserve ratio targets are met (1.25 percent within two years of enactment and 2.0 percent within 10 years of enactment). HUD will provide periodic reports to Congress on the financial soundness of the FHA fund.

Credit Reform.—Credit reform changes the way the FHA single-family program is presented in the budget, but retains both the fund itself and the statutory obligation that the fund be financially sound. Under credit reform, any expected losses or explicit subsidies from new credit commitments must be funded up-front through Congressional appropriations.

For most Federal credit programs, losses from prior credit commitments are paid for through a permanent indefinite appropriation. Administrative costs are funded through current appropriations. However, for the FHA single-family program, the fund retains the responsibility for paying all losses on both old and new business, paying administration expenses, and maintaining sufficient fund capital reserves as reflected in its statutory targets. To meet these requirements, the expected income from new credit commitments must exceed the expected losses from new commitments. This results in a negative credit subsidy for the program in the 1992 budget of $815 million. This does not mean that current premiums are excessive. Under credit reform and the FHA reforms in NAHA, any additional premium income beyond that needed to pay for losses on new credit commitments must be available to:

- pay for administrative expenses of the fund;
- fund losses on prior commitments; and,
- build the fund's reserves to 2 percent of outstanding insurance liabilities. This is enough to cover additional losses from higher-than-expected future defaults.

Once the targeted 2 percent reserve is reached, premiums can be reduced, provided the reserve is maintained.

FHA Multi-Family

The FHA's General Insurance Fund multi-family programs insure mortgages for a number of property types, including apartment buildings, condominiums, hospitals, and nursing homes. Each program poses a different risk to the Government; for example, condominiums are a smaller risk than apartment buildings and hospitals. Much better information is needed about how much risk is posed by these insured properties.

Cost and Risk.—Over the past decade, many multi-family rental properties insured by FHA have developed severe financial and physical problems. Poor underwriting and inadequate monitoring of program participants have resulted in many deteriorating building projects which provided unacceptable living conditions for low-income tenants and have often defaulted.

The default rate and the credit reform subsidy calculation understate the poor quality of many of these loans, because of a cross-subsidy. To prevent default, project-based Section 8 vouchers have often been given to FHA multi-family housing landlords to attract new tenants or to permit existing tenants to pay higher rents.

Proposals to Reduce Risk.—The Administration has taken steps to correct the dual problems of accurately assessing risk up-front, and improving the management of properties currently insured. In September 1990, HUD published a final rule terminating the multifamily co-insurance program. Co-insurance, with insurance to date of $9.2 billion, has resulted in claims of $2 billion so far, and eventually could realize losses totalling $1 billion. A review by Price Waterhouse, to be completed this year, should assist HUD in assessing the cost of major General Insurance Fund programs.

To improve the management and monitoring of the existing portfolio, the Administration is proposing a "Low-Income Resident Economic Empowerment" program to identify and eliminate physical and financial problems in low-income rental properties. The plan would create two new programs and provide $668 million in 1992 and $1.6 billion over the next five years to meet project cash flow and repair problems. In exchange for financial assistance, property owners must agree to provide residents an equity interest in the project. This plan is expected to reduce long-term costs to the Federal Government while empowering low-income residents by giving them more of a financial stake in their homes.

VA Home Loan Guarantees

The VA home loan guarantee program is an entitlement that finances mortgages with no downpayment for veterans and active duty servicepersons regardless of income. In 1990, VA guaranteed over 190,000 loans with an average loan amount of $83,000, comprising 6 percent of the single-family mortgage market. Private lenders participating in the program forgo the downpayment in exchange for VA's guarantee. The coverage provided by the guarantee ranges from a high of 50 percent for smaller loans (mainly to moderate income and first-time homebuyers) to a low of 25 percent for larger loans. The maximum claim payable by VA is $46,000.

Cost and Risk.—The major cost of the loan guarantee program results from borrower defaults and subsequent property foreclosures. One of the most important determinants of defaults is lack of borrower equity, or high loan-to-value (LTV) ratios. Because there is no downpayment and the funding fee can be financed, over 80 percent of new VA loans have LTV ratios of 95 percent or more. Over half have LTV ratios of 100 percent or more. Between 1986 and 1990, over 250,000 VA-guaranteed loans were foreclosed. Based on the most recent matured loan cohort, 15 mortgages will eventually be foreclosed for every 100 new loans.

The weighted average subsidy cost to the Government is 3.1 percent of the value of new direct and guaranteed loans. Assuming moderate housing inflation, the subsidy cost to taxpayers is estimated to be $2 billion between 1992 and 1996 under current law. Losses on loans already in the pipeline will add another $1.8 billion.

Progress Made in Reducing Risk.—In the 1991 budget, the Administration proposed several changes to lower default rates and reduce the Government's liability in the event of a foreclosure. The proposed reforms included a 4 percent downpayment requirement and an increase in the loan origination fee. Unfortunately, the Congress did not adopt any of the Administration's proposals.

Proposals for 1992.—For 1992, the Administration is again proposing changes to reduce long-term losses. The major proposals are to: (1) repeal the sunset on the loan origination fee increase that was enacted as part of the 1990 Reconciliation bill; (2) charge a 2.5 percent fee and a 10 percent downpayment to all but active duty servicepersons for multiple use of the loan guarantee benefit; and (3) include expected losses on the resale of property in calculating whether to take it over or to pay the default claim. Combined, these proposals are estimated to reduce the average subsidy rate from 3.1 percent to 1.9 percent.

Rural Housing Insurance Fund

The primary FmHA housing programs are the Section 502 single-family direct and guaranteed loan program and the Section 515 multi-family direct loan program. Both programs subsidize loans by setting interest rates below the Treasury rate. The Section 502 homeownership loan program provides qualified borrowers with loans for the purchase, rehabilitation, or repair of single-family owner-occupied units. Participants qualify if their income is less than 80 percent of State median income, they live in a legislatively defined "rural" area, and they cannot obtain credit from a private institution.

The Section 515 program, which generally lends to private developers, finances both the construction of new rental housing and the purchase and rehabilitation of existing substandard rental housing. Units are occupied by low- and moderate-income households, elderly households, or handicapped individuals.

Cost and Risk.—Most of the cost of both programs is the difference between FmHA's interest income and the interest expense of Treasury borrowing. The rate charged Section 502 borrowers depends on their income; currently, the average effective interest rate for the outstanding portfolio is 3 percent. A Section 515 borrower's effective interest rate is generally fixed at 1 percent.

Other costs come from loan defaults and delinquencies. The default and delinquency rate of the outstanding $9.4 billion Section 515 portfolio is near zero due to the low interest rate paid by developers (1 percent) and their creditworthiness. The Section 502 delinquency rate, defined as any payment more than 30 days overdue, was 14.9 percent of the outstanding $18.9 billion loan portfolio in 1990. However, write-offs from loan defaults were just 0.3 percent of principal. The total cost or subsidy over the life of loans expected to be underwritten in 1992 is estimated at 23 percent of face value for the Section 502 and 43 percent for the Section 515 program.

The riskiness and costs of Section 502 loans are larger than for conventional, privately originated loans. First, FmHA lends to very low- and moderate-income households who, as an eligibility requirement, are unable to obtain private credit. Second, because FmHA's interest rate is periodically adjusted for changes in the borrower's income, the underlying costs of the outstanding portfolio change as borrowers' ability to pay changes. During economic slowdowns, not only might more defaults and delinquencies be expected, but the effective interest rate paid by borrowers will drop as well. FmHA interest subsidy costs increase correspondingly. As appraised values fall on existing loans, a lack of borrower's equity provides an incentive for default. Because FmHA is authorized to lend at 100 percent of a home's appraised value, a relatively small decline in home values can produce a surge of defaults.

Progress in Reducing Cost.—To limit costs, the Administration has sought and, for the first time, received appropriations for a Section 502 loan guarantee program. In 1991, this new program will be directed at those moderate-income borrowers who can obtain private loans with a Government guarantee. Subsidized guarantees, where FmHA will pay part of the interest rate on a loan, also have been authorized and appropriated for lower-income borrowers. Both guarantee programs cover losses on 90 percent of loan amounts. Together, they should stimulate lending in the private sector and reduce FmHA costs as financing assistance shifts from direct to guaranteed loans.

In 1991, FmHA hopes to initiate a pilot Field Office Specialization Program (FOSP). This program will improve credit management by providing specialized staff and contract services in 14 States. Now, a single FmHA officer may determine borrower eligibility, appraise the property, make and service the loan. By specializing these functions, FmHA expects to decrease delinquency.

The budget continues progress toward the goal of targeting assistance to the most needy and making loan delivery more efficient. It further shifts the mix of the single-family housing assistance from direct to guaranteed loans and initiates a voucher rental assistance program. More of the current direct loan borrowers can be underwritten with guarantees to the private sector than current appropriations allow. Replacing rental assistance contracts and some multi-family loans with vouchers would promote efficiency by allowing renters the freedom to choose where to rent and by using existing housing stock rather than building unnecessarily.

EDUCATION

The Federal Government helps students and their parents meet the costs of postsecondary education by creating an extensive private market for student loans. The Guaranteed Student Loan (GSL) program uses guarantees to lenders through intermediary agencies and interest subsidies directly to lenders as incentives so that they will make loans available to postsecondary students without collateral. GSL is the largest Federal source of student aid and represents more than 61 percent of total student aid provided by the Department of Education. In contrast to most other areas of Federal credit activity, it is unlikely that any significant market for student loans would exist in the absence of the Federal program, because of the lack of collateral.

GSL Share of Federal Credit.—GSL subsidies represent two-thirds of total subsidy costs for all Federal 1992 direct and guaranteed loan commitments. The estimated current services subsidy for the GSL program for 1992 is 21.7 percent, 24.5 percent for Stafford loans, 8.1 percent for PLUS loans, and 14.1 percent for Supplemental Loans for Students. Proposed policies will reduce the aggregate subsidy for GSL to 20 percent.

About 13,000 participating lenders receive 100 percent insurance against the risk of default, subject only to lender failure to follow "due diligence" regulatory procedures, in which case all or part of default claims are not honored. The guarantee is provided through intermediary guarantee agencies which are in turn reinsured by the Federal Government for between 80 and 100 percent of default costs, depending on the rate of default in their portfolios. The maximum amount of each loan and the borrower's eligibility for the loan are determined separately by educational institutions operating under Federal law and regulations.

Interest and Credit Risk.—Until default costs rose so dramatically, the largest source of cost exposure in GSL was the link between interest rates and subsidies in the Stafford loan program. Lenders receive an assured rate of return equal to the interest rate of 91-day Treasury bills plus 3.25 percent, revised quarterly. While the student is in school, the Federal Government pays the full amount. When the student enters repayment status, he or she pays a fixed amount (8 percent initially, then 10 percent), with the Government paying the lender the difference between that payment and the assured rate. The Government bears the full risk of rising interest rates. This structure, while costly in times of high interest rates, has long been deemed necessary to assure full participation of sufficient numbers of lenders to make the program viable. Even at high interest rates, the program is less costly to the Government than a comparable amount of aid provided through grants.

Loans outstanding at the end of 1990 were $52.9 billion. Gross default rates have climbed from 12.5 percent in 1980 to 16 percent in 1990, although the net default rate, which takes collections into account, has remained between 10 and 11 percent. The disparity between gross and net rate trends reveals the increasing effectiveness of collection efforts during this period. Default rates vary depending on a number of factors, including the background of students (e.g., family income), the kinds of schools they attend (proprietary vocational, community college, college or university), whether they complete the education program, and number of years in repayment. Gross default costs, including death, disability and bankruptcy costs, were $2.4 billion in 1990, compared to $283 million in 1980.

Risk of Guarantee Agency Failure.—Guarantee agencies are intermediary State and non-profit private entities which insure loans, collect on defaulted loans, and provide various services to lenders. In 1990, the collapse of one of the largest of these agencies dramatically highlighted potential risks in these intermediaries. Guarantee agencies only receive 100 percent reinsurance on defaults from the Federal Government if their default rate is below 5 percent. At 5 percent, the reinsurance amount is reduced to 90 percent; at 9 percent, it drops to 80 percent. Agencies must keep defaults under control or incoming business and reserves growing in order to remain solvent.

When the large agency collapsed, the Government was not obligated to pay reinsurance on the loans it insured. However, to avoid shaking the confidence of students and schools any further, the Administration assured lenders that all their valid claims would be fully paid.

The policy purpose of the GSL program creates a necessary degree of risk not found in normal commercial or consumer lending. The Government recognizes and accepts a higher degree of risk for these loans so that persons with few financial resources can add borrowed resources to the grants and other aid provided and thus attend postsecondary institutions. However, growing default costs, Senate investigations, and the 1990 guarantee agency collapse all made clear that the current level of Government exposure in GSL exceeds the acceptable level of risk inherent in the program. This has led to a series of efforts to reduce the risk.

Progress in OBRA.—The Administration proposed and Congress enacted an initial set of default reduction reforms in OBRA. Savings from these reforms are projected to be $1.7 billion over five years. For the first time, students at schools with unacceptably high default rates (35 percent in 1991 and 1992, 30 percent in 1993 and subsequent years) will be ineligible for GSL loans.

Other changes include better screening of students without a high school diploma or GED for true ability to benefit from postsecondary program, extending restrictions on Supplemental Loans for Students enacted in 1989 OBRA, and delaying disbursement of loans for first-year students.

A joint Education/OMB management review team, including members from other agencies and the private sector, is examining all key aspects of Federal management of the GSL program. The team's recommendations will form the basis for a complete overhaul of the Department's GSL operations. The objectives are to improve information and monitoring so that problems can be caught early and prevented from becoming serious and to devise improved procedures for dealing with problems when they do arise.

1992 Budget and Reauthorization Proposals.—These proposals are discussed more fully in Chapter IV.A., "Investing in Human Capital and Reforming American Education." In general, they build on lessons learned from the experiences in 1990 and continue the direction of the 1990 OBRA reforms. Major risk-reducing provisions are:

- States would be required to back the guarantee agencies with full faith and credit assurance. In the case of a guarantee agency collapse, States would assume some of the financial risk (the difference between the Federal reinsurance level and the insurance paid to lenders and part of the administrative costs). States would be allowed to charge schools a fee to help cover their costs. If States do not choose to back a guarantee agency, a risk-based premium would be assessed on schools in the State.
- States would be required to pay a fee on new loan volume if the cohort default rate of schools in the State exceeds 20 percent. This will encourage States to impose necessary controls on State licensure and to keep out schools that cannot provide quality education. Based on 1988 cohort data, this fee would be assessed on seven States.
- Lenders with default rates above 20 percent would have their special allowance payments (currently 3.25 points over the plus 91-day Treasury bill rate) reduced by .25 percentage point. Based on 1988 data, this would affect approximately 155 lenders.
- States would be required to ensure that schools met certain minimum quality standards before granting licenses to operate, and accreditation agencies would also monitor more closely the quality of the schools they review. The 1990 OBRA provision would be further tightened by dropping the default rate threshold to eliminate schools from GSL eligibility from 30 percent to 25 percent in 1994.

- Different types of schools have different default experiences, not always attributable to programmatic differences. Of particular concern are short-term vocational programs, where high cost of attendance coupled with extraordinary default rates mean high default costs. Reauthorization proposals will limit the maximum allowable cost of attendance at less than 1-year vocational programs to community college costs.

Possible Loan Program Restructure.—The budget and current reauthorization proposals continue the current GSL policy, which has private lenders provide the capital for subsidized loans. The Administration is currently exploring policy options and related management questions for a possible shift from a guaranteed to a Federal direct loan structure. No such shift has been decided upon. A fundamental restructuring of the GSL program would involve a complex phase-out of the current guarantee system and significantly increased management responsibilities for the Department of Education. Whether this approach would be desirable, all things considered, remains to be determined.

Health Education Assistance Loans

Cost and Risk.—Since its inception in 1976 as a Federal loan guarantee program of last resort for students in critical and non-critical health professions, Health Education Assistance Loans (HEAL) has insured over 295,000 loans, lending over $2.1 billion. Although intended to be self-financing, HEAL is structured as a Ponzi scheme, relying on insurance premiums from new loans to pay defaults associated with old loans. This maintains an appearance of self-financing, which invites continuation of the program.

HEAL's upfront 8 percent premiums, however, have been unable to cover defaults. In 1990, Congress appropriated $25 million to keep HEAL going. Credit reform helps to display HEAL's woes. In 1992, the program will require an estimated $36 million to pay defaults arising from previously guaranteed loans; through 1996, $246 million will be needed for this purpose. If the current $260 million a year volume of loans is maintained, $25 million would be required for subsidies in 1992 and an estimated $133 million over 1992–96.

Attempts to Reduce Risk.—The Administration has proposed methods for reducing HEAL defaults in previous budgets. These have included requiring risk-sharing by lenders and schools. In the 1991 budget, the Administration recommended an orderly phaseout of HEAL. Congress did not adopt any of these proposals.

This budget proposes a three year phaseout of HEAL linked to a targeted, enlarged, and enhanced Health Professions Loan Program (HPSL). The phaseout of HEAL will save an estimated $94 million in subsidy payments over the next five years. Expansion of HPSL would be funded with $15 million in new capital contributions, representing a downpayment on a multiyear HPSL capitalization effort which would total $90 million over six years. These new contributions, along with the $60 million already available each year from HPSL's $375 million revolving fund, would enable the program to support 10,000 loans annually to exceptionally needy students in critical health professions. The annual average award of the enhanced program would be $8,000 in comparison with the current average of $3,000 awarded to 20,000 borrowers. These larger, targeted awards would enable disadvantaged students who may have relied on HEAL to obtain additional assistance in completing health professions training.

Student Loan Marketing Association

Student lending is supported by extensive secondary market activities, most notably by the Student Loan Marketing Association (Sallie Mae), a Government-sponsored enterprise. This federally established, stockholder-owned, for-profit corporation was chartered in 1972 and now plays a dominant role in GSL financing. At the end of 1990, Sallie Mae owned 51 percent of all outstanding GSLs. Sallie Mae's domination grew in January of 1991 when it bought $1.2 billion in student loans from Chase Manhattan Bank, the fifth largest holder of GSLs, increasing Sallie's share of outstanding loans to 53 percent.

Sallie Mae is extremely strong financially. The Federal Government bears most of the risk associated with GSL defaults. Sallie's

best copy available

transactions have little or no bearing on the likelihood of default, and its own debt is backed by ownership of 100 percent guaranteed GSL loans. Its income is based on a large spread between its low cost of funds and the rates of return it receives on student loans, loan commitments, and other risk-free securities. Sallie poses little financial risk to the Government under current policies as long as it maintains a good match between the duration of its assets and liabilities.

Stress Test.—As with the other GSEs, a stress test was applied to Sallie Mae to provide more information about its financial resiliency. So long as it manages its interest rate risk well, Sallie's only real risk is that the Government might change the rules of the game. Because student loan defaults are much less sensitive to economic conditions than collateralized housing or farm loans, the stress scenario is regulatory rather than economic.

The stress test assumes that the Government retroactively removes its default coverage on Sallie Mae's $28 billion of loans and commitments in excess of the minimum 80 percent. In addition, the test assumes that guarantee agencies holding 30 percent of Sallie's loans become insolvent, with 20 percent of Sallie's loans in these agencies defaulting in one year. This leaves Sallie with credit losses of 1.2 percent of its loan assets if recoveries are assumed to be zero. On top of this credit loss, the test assumes that the special allowance is retroactively reduced 100 basis points to 225 basis points. The result of such draconian measures is that Sallie Mae's income is cut in half but remains positive. It does not even need to dip into capital. Even if such events continued and Sallie did not change its practices or pricing policies, it would remain profitable, although less so.

Sallie would continue to be profitable because even after its special allowance is cut by 100 basis points, its interest spread is still substantially positive. What can only be described as large credit losses amount to less than 1 percent of total assets. Sallie earns considerable profit for its stockholders. Its success in fulfilling its statutory role in the GSL program is due to the combination of its ability to operate almost entirely like a private corporation, and the substantial benefits from its status as a Government-sponsored enterprise.

AGRICULTURE

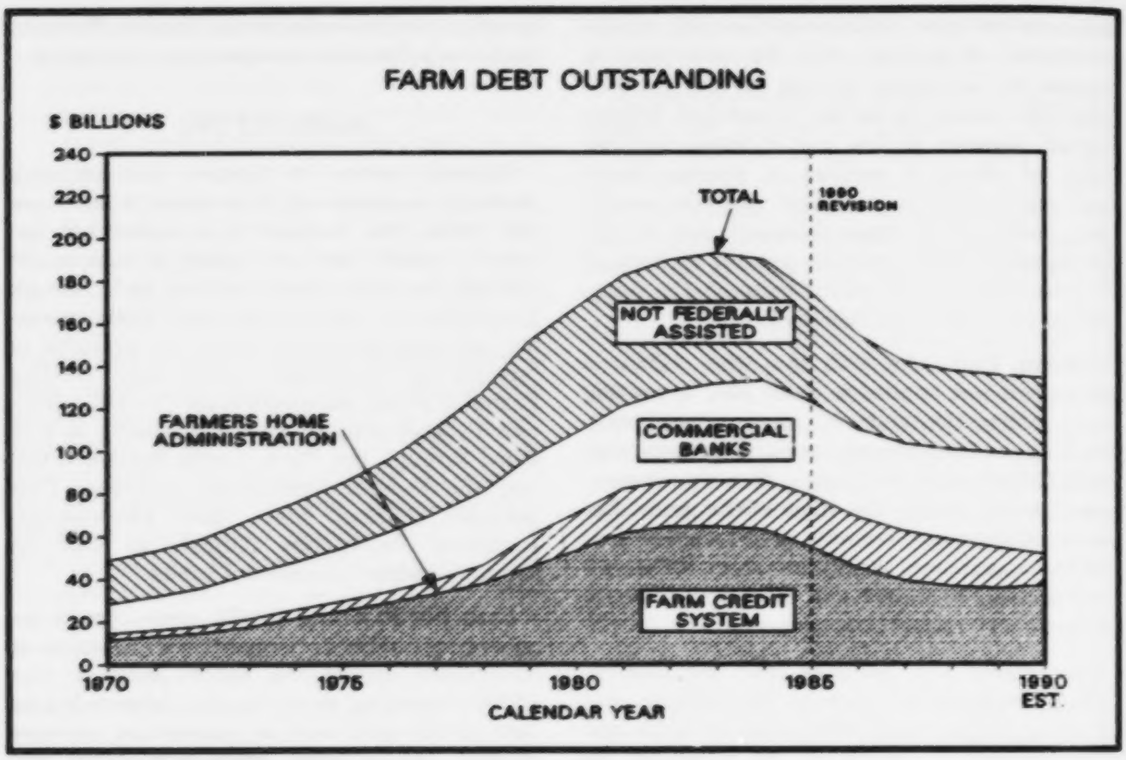
Farmers borrow to finance each season's planting expenses and to purchase land. Since the 1930s, the Federal Government has assured a stable, low cost supply of farm credit through its own direct lending and through guarantees of commercial loans. Both operating and land ownership loans are available to farmers at subsidized rates from USDA's Farmers Home Administration (FmHA). Indirect Federal support for farm lending is provided through the Farm Credit System (FCS) and the Federal Agricultural Mortgage Corporation (Farmer Mac), both Government-sponsored enterprises (GSEs), as well as through insured commercial banks.

Both the FCS and FmHA were heavily involved in lending to support the expansion of agriculture during the export boom of the 1970s. Expecting rising income, farmers bid up land prices, and took on substantial amounts of debt. When world agricultural trade and prices plummeted in the early to mid-1980s, land values declined by up to 50 percent in some areas. Both FCS and FmHA found themselves with significant losses. Federal assistance to FCS banks has cost $1.3 billion to date and is projected to exceed $2.2 billion. FmHA loan losses were $7 billion in the last two years, with another $1.5 billion expected through 1992.

In response to these stresses, the Agricultural Credit Act of 1987 restructured these farm lending institutions. Greatly assisted by better farm sector conditions, the health of the Farm Credit System has much improved. However, farm income is not likely to continue to grow as rapidly in the future as it has recently. Farm land values increased nationwide by 5.5 percent in 1989 and an estimated 3.9 percent in 1990, but are forecast to increase much more slowly through 1996.

Moreover, the 1990 farm bill makes U.S. agriculture more market-oriented, thus enhancing its ability to compete as the lowest-cost supplier domestically and on the world market. But export demand is variable. Therefore, the extent of Federal exposure to farm credit

pages tightly bound



losses is still at issue, along with the adequacy of the reforms.

Repayments and substantial write-downs of farm real estate loans by Federal and private lenders have brought most borrowers' debt-to-asset ratios below 40 percent. Total farm debt has declined from $200 billion in 1985 to nearly $135 billion today, with real estate debt constituting roughly half the total. Coupled with farmers' renewed reluctance to take on more debt, this should cause fewer losses on new farm real estate loans.

The Farm Credit System

Risk is inherent in the structure of the FCS. By statute, it may lend only to agriculture, putting its "eggs" all in one basket. It is required to make farm credit available nationwide.

After the near-insolvency of the 1980s, FCS no longer fills the whole credit availability gap between commercial banks and FmHA. But as a cooperative, owned by its borrowers, FCS finds it difficult to establish uniform higher lending standards. There is a natural conflict between borrower-owners, desiring the lowest possible loan terms, and borrower-directors, interested in preserving the institution's financial viability. Some FCS institutions charge one interest rate on all real estate loans, regardless of a borrower's financial condition. There is no System-wide policy setting loan terms according to borrower risk.

The FCS is decentralized. It has 12 Districts—11 of which are served by Farm Credit Banks formed in the 1988 required merger of Federal Land Banks and Intermediate Credit Banks. In the remaining District, the Jackson Federal Land Bank is in receivership and therefore did not merge with the Jackson Intermediate Credit Bank. Internal FCS oversight is conducted mainly through the Funding Corporation, which is responsible for coordinating the Districts' participation in debt issuances. The Funding Corporation has the authority to restrict an individual System bank's access to debt issuances based on review of the bank's financial condition; in this sense, it has more ability than any System entity to control risk. Externally the FCS is regulated by the Federal Farm Credit Administration (FCA), whose board is appointed by the President.

The degree to which FCS institutions' capital is at risk is uncertain. District banks are statutorily liable for payments on FCS debt. System-wide debt is technically the "joint and several liability" of all FCS District banks. In practice, the existence of "joint and several liability" is uncertain. The 1987 FCS bailout legislation authorized up to $4 billion in Federal assistance. At that time, the System had over $2.4 billion in available retained earnings, much of it at the local association level. However, the better-off FCS institutions refused to assist the less solvent ones, and the liability fell to the Federal Government. The bailout specifically guaranteed that all existing borrower stock would be redeemed at par, essentially acknowledging that the stock was a liability, rather than at-risk capital.

Financial Condition of the FCS

The severe downturn in U.S. agriculture during the first half of the 1980s, hit the FCS hard. By December 1986 over 12 percent of FCS loans were categorized as "non-accruing", defined as those on which principal and interest is uncollectible or is seriously past due and under-collateralized.

Two factors exacerbated FCS problems. First, it charged borrowers on the basis of average costs on outstanding FCS debt, rather than "marginal" costs on newly issued debt—the way commercial lenders do. Thus, when market interest rates declined in the mid-1980s, many of the better FCS borrowers switched to commercial bank lenders. In 1987, for the first time in over a decade, commercial banks had a greater market share of farm loans than the FCS.

Second, its loan losses required additions to reserves of $4.7 billion in 1985 and 1986. This reduced the book value of borrower stock, as well as FCS associations' available surplus capital. Borrowers were required to purchase stock when their loans were originated, and the stock was automatically redeemed upon a loan's repayment. The fear of not receiving the par value of stock upon redemption accelerated the flight of quality loans from the FCS.

By September 30, 1990, the volume of nonaccrual loans had decreased to just over 5 percent of all FCS loans, reflecting the large write-offs of uncollectible loans and the improved farm income of the late 1980s. The allowance for loan losses was $1.5 billion. In the last three years, the allowance was reduced by over $1.4 billion. This is a substantial reason FCS showed positive net income of $704 million in 1988 and $695 million in 1989. Net income was $455 million through the third quarter of 1990. Overall, asset quality is improving, but weakness remains in the real estate portfolio.

The continued financial stability of FCS will depend on its profitability. This, in turn, depends on its ability to compete for the best quality loans with commercial lenders, and on a reduction in its costs. The FCS has taken steps to make loan decisions on borrower income alone. Interest rate risk has been reduced as most real estate loans are made at adjustable rates, albeit usually at local discretion rather than based on specific indices. The organization of FCS makes controlling lending policies and interest rate differentials difficult. Moreover, although the 1987 Act yielded some savings from mergers, the System's layered structure results in overhead costs higher than those of commercial banks.

The outlook for FCS can be assessed by examining the prospects for each of the Districts. These vary from fairly stable to extremely vulnerable. Under an optimistic forecast for agriculture (stable farm income and no national recession in 1991), only five Districts are likely to achieve or maintain the 7 percent capital standard without having to raise interest rates or otherwise widen their interest margins. Four others risk becoming insolvent in the 1990s (St. Paul, Omaha, Western and Spokane) unless they can widen their interest margins substantially, perhaps to unrealistic levels.

Although weaker Districts might build capital by increasing the rates they charge borrowers, it may be difficult to increase interest rate spreads by the 50 to 150 basis points above historical trends that would be necessary to achieve the capital standard. The incentive in borrower-owned cooperatives is to keep rates down, and heavy competition from commercial banks may keep creditworthy borrowers out of the FCS.

Consistent with the approach taken to test the financial strength of the other GSEs, a stress test was applied to FCS. A moderately severe stress was imposed, through simulation, beginning in 1995. Farm income from all sources (including Federal payments) and land values fall 10 percent per year for three years (a 28 percent drop from initial levels). While such changes would clearly be significant, they are smaller than experienced in the early 1980s. Predictably, more of the Districts became insolvent or had to raise their interest spreads ever higher under this pessimistic scenario. Only six of the Districts are likely to survive such stress without raising interest rates to unrealistic levels. Taxpayer losses could reach $5 billion, or $1 billion in present value. In contrast, Fannie Mae, Freddie Mac, and Sallie Mae survive more severe stress tests.

Reducing Taxpayer Risk

The Agricultural Credit Act of 1987 created three cushions against another taxpayer bailout of FCS.

- At-risk capital must be raised by FCS institutions to 7 percent of risk-adjusted assets by 1993. As of September 30, 1990, all District banks except Spokane were on track to meet this schedule.
- A system-wide insurance fund was created that, starting in 1993, would pay any amount owed on FCS debt that a member bank cannot pay. It is also liable for repayment of Federal bailout funds. The Government provided $260 million of capital. The FCS banks must pay premiums based on the amount of non-accrual, accrual, and guaranteed loans. The first premium is now a year overdue, but is expected to be paid along with the second premium later this year. Payment is required until the Fund equals 2 percent of outstanding loans, which might be achieved in 1997. This may be raised at the discretion of the Insurance Corporation.
- The FCS Financial Assistance Corporation (FAC) was created to serve as a safety net financed by up to $4 billion in 15-year federally guaranteed debt. The Government pays all interest in the first 5 years and half in the second 5 years. To date, $1.3 billion has been raised to buy preferred stock of FCS institutions certified as distressed by the FCS Assistance Board. FAC authority to issue debt expires September 30, 1992, and the Assistance Board terminates December 31, 1992, when most of their functions are assumed by the Insurance Corporation.

Self-help was a prerequisite for Federal help. FCS institutions were assessed to purchase stock in FAC. However, they sought successfully to have some of these funds rebated. Shortly after passage of the 1987 Act, the Federal Land Bank of Jackson was placed in receivership at a cost to FAC of $388 million. The FCS has stated that the member banks will default on this debt, wiping out the FAC Trust Fund balances and requiring an estimated $100 million from the Insurance Fund. Furthermore, certified FCS institutions have discretion whether to redeem FAC debt at maturity, or to leave those obligations to the Insurance Fund. Finally, FCS repayment to Treasury for Treasury interest payments on FAC debt, while required by law, has yet to be recorded as a liability on the FCS banks' books. Thus, it is clear that additional Federal outlays will be required, and that reforms are needed to reduce the Federal exposure.

Proposed Reforms to the FCS

Insurance Corporation.—The Insurance Corporation should be separated from the FCA. Currently, the three-member board of the FCA is also the board for the Insurance Corporation, but this relationship between the regulator of FCS and the insurer presents possible conflicts of interest. In particular, the regulator, which is responsibie for setting regulations and standards that should keep an institution from insolvency, should not have the capacity to use insurance funds to cure an insolvency that might occur at least in part because of its own miscalculation. The Insurance Corporation should be managed by an independent board, with its own examining capabilities to enable independent decisions regarding assistance for troubled institutions.

The Insurance Corporation should be made the statutory successor to the agreements between the Assistance Board and FCS institutions certified to receive FAC assistance. The Assistance Board's authority expires in 1993, yet the terms of the agreements run until FAC assistance is repaid after 15 years. This clarification would ensure that the Insurance Corporation has legal standing to enforce provisions in the agreements that require the continuation of sound banking practices after 1992.

Financial Assistance Corporation.—The 1987 Act should be amended to require certified institutions to redeem FAC debt as scheduled, rather than leave it to their discretion. If this change is argued to cause the preferred stock bought by FAC to be considered a liability of the certified bank, rather than a capital infusion to it, regulatory accounting standards could be adopted to maintain that FAC purchase of preferred stock represents capital. System banks should be required to begin accruing in their financial statements all payables related to the repayment of FAC debt, as well as the repayment of all other Federal FAC-related outlays.

Management of the FCS.—The 12 FCS Districts should be consolidated into two to five Districts, to provide Districts greater geographic diversity and reduce overhead expenses. FCS boards of directors should be required to include more non-borrowers who have expertise in the management of financial institutions. This would provide needed objectivity and reduce the moral hazard inherent in the dual role of borrower-director.

A System-wide standard for sound asset/liability management should be adopted, such as requiring marginal cost pricing and indexing adjustable rate loans to Treasury rates. This would reduce the risk from lagging adjustments by FCS institutions' directors. Liquidity guidelines for FCS institutions should be clarified and enforced. Currently the FCS has $51 billion in outstanding loans and well over $54 billion in outstanding debt. Some institutions have over 400 percent of the liquidity required by the Funding Corporation. These banks are investing mostly in commercial paper and agency securities, not Treasury securities as in past years. This implies that some institutions are creating arbitrage profits from the issuance of federally backed FCS debt.

Farmers Home Administration Farm Loans

The Federal Government provides farmers financing assistance through the Agricultural Credit Insurance Fund (ACIF) of the Farmers Home Administration (FmHA). Originally intended to be a "temporary provider of supervised credit," it has over time become a continual source of subsidized credit. Relatively few borrowers have "graduated" to private credit or commercial viability. In 1991, $662 million in ACIF direct loans are authorized, along with $3.6 billion in guaranteed loans.

The ACIF violates most of the characteristics of well-run credit programs. By statute, it lends to small farm operations and is the farm borrower's "lender of last resort"; as a condition of eligibility borrowers must have been denied private credit "at reasonable terms". ACIF borrowers are therefore by definition very high credit risks, and this is reflected in ACIF loan losses and loan subsidy costs. ACIF currently has an outstanding direct loan portfolio of $20 billion and outstanding guarantees of $5 billion. In the last two years, over $4.5 billion in direct loans have been written off, with another $1.7 billion expected in 1991 and 1992. Many of these write-offs are due to conditions not expected to affect newly made loans, notably the severe agriculture sector downturn of early the 1980s and a discontinued loan program for "economic emergencies". Nonetheless, losses on current and future loans are still expected to be among the highest of all Federal loan programs.

Expected costs of current loans are reflected in ACIF loan subsidy costs. Since the subsidy under credit reform accounting is defined as the present value of Federal costs on loans, both net interest losses and default costs are included. The estimated subsidy on direct farm ownership loans made in 1991 is 33 percent, while for operating loans it is 22 percent. These two programs are the predominant lending activities of ACIF. The subsidy is so large due to a number of causes. Farm ownership loans are generally made for 100 percent of appraised value, leaving no equity for borrowers and so no cushion if land values decline, as they did in the mid-1980s. While eligibility requires borrower cash flow that is adequate for debt service, there is no required margin for adversity. If crop production or prices are less than forecast when the loan is made, or if a tractor breaks down, there is no provision in borrower income for contingencies.

The cost of ACIF direct loans is increased by generous "borrower rights". Delinquent borrowers are eligible for interest rate reductions and moratoriums on all loan payments for up to five years.

Guaranteed farm loans have not experienced the same relative losses as direct loans. Unlike direct loan borrowers, guaranteed borrowers are required to have a 110 percent debt service margin, which helps provide for contingencies. Most importantly, guaranteed loans are made to more creditworthy borrowers who have access to private credit markets. Because the private originators must retain 10 percent of the risk, greater care is exercised in examining borrower repayment ability. There is some disturbing evidence, presented in GAO and Inspector General reports, that private lenders are using ACIF guarantees to reduce the risk on their current borrowers' loans. This violates the policy purpose of the program, which is to assist those who could not secure financing without the guarantees. FmHA is reviewing lenders' guarantee portfolios and new guarantee applications to correct this problem.

ACIF Reforms in the 1990 OBRA and Farm Bills

The 1990 OBRA and farm bills made major changes to the future direction of Federal farm loan assistance, as well as portfolio management improvements which should reduce the cost of ACIF loans. OBRA adopted some of the Administration's 1991 budget proposal to shift from direct loans to guaranteed loans. Direct loans are authorized at $551 million for 1991, down from $1 billion in 1990 and $3 billion as recently as 1986. Direct loan authorizations decline further to $284 million in 1995. The 1992 budget adopts OBRA direct and subsidized guaranteed loan levels through 1995.

OBRA authorized a new subsidized guarantee program at levels equal to reductions in direct loans ($482 million in 1991). These guaranteed, privately originated loans are accompanied by a Federal interest rate buydown, which will reduce the effective interest rate to borrowers by up to 4 percentage points. This will make these guarantees as affordable as ACIF direct loans that were made at Treasury rates, which historically comprised about 40 percent of direct loans. The costs are estimated to be less than direct loans, largely because guarantees do not carry the same substantial borrower rights. The guarantees are targeted to former direct loan borrowers, to aid their transition to private credit.

The 1990 farm bill should reduce ACIF loan losses, caused in part by loopholes created by the 1987 Act. For example, the farm bill now requires that borrowers eligible for net recovery buyout of their loans have acted in good faith, whereas previously, delinquent borrowers sometimes sold collateral for ACIF loans in order to reduce the net recovery value. In addition, all of a borrower's assets must now be included in the net recovery calculation, not just those pledged as collateral. Some delinquent borrowers had substantial assets such as boats or bank certificates of deposit which were heretofore untouchable.

In the past year, many borrowers whose loans were written down have again become delinquent and requested another writedown. In some cases this was because their loans were written down until they showed just enough income to cover their debt service, leaving no cushion for mistakes. The law now requires that writedowns leave a 105 percent debt service margin. The bill further limits writedowns to one per borrower, to counteract incentives for an endless cycle, and limits the writedown to $300,000.

Another provision will increase incentives for lender participation in the ACIF guarantee program by recommending that FmHA accept private sector loan documentation for guarantee applications. The substantial paperwork burden has been cited repeatedly as a barrier for many banks' participation. The bill also authorized ACIF guaranteed loans to be securitized by Farmer Mac, a GSE, which will increase their liquidity.

Further Reforms in ACIF Lending Proposals

A number of Administration proposals were not adopted in the farm bill or OBRA. The Administration is anticipating an in-depth review of farm lending policy in the coming year, and will make further recommendations to focus the mission of Federal farm loan assistance and reduce Federal exposure.

The aging of the farm population may require that young, beginning farmers be assisted. Sales of ACIF inventory property will be targeted to beginning farmers as will new loan assistance, to the extent possible without jeopardizing the financial viability of existing ACIF borrowers. Direct farm ownership loans will be targeted to socially disadvantaged applicants, as defined in the Small Business Act. Such loans will not be used to refinance private loans, in order to prevent known high-risk additions to the portfolio.

To help return the program to its role as temporary provider of credit, eligibility for direct loans is proposed to be limited to seven years, while eligibility for any combination of direct and guaranteed loans would be ten years. At the end of these periods borrowers must rely exclusively on private credit.

Direct loans to delinquent borrowers would be prohibited, and tighter financial standards would be applied. In order to avoid placing borrowers in the difficult situation of barely affording their loans, a debt service margin of 105 percent is proposed for direct loans. The possibility of reducing loan-to-value ratios on direct loans from 100 percent to 90 percent or 95 percent, and for guaranteed loans to 80 percent, should be examined closely, as the current practice of allowing zero borrower equity reduces the incentives for borrowers to repay their loans.

LOANS TO BUSINESS

In contrast to its dominant credit role in housing, education, and agriculture, the Federal Government has a relatively small role in providing credit for business. Federal credit is focused on export financing, rural utilities, and small and minority businesses; it amounts to only 2 percent of business liabilities. Bank loans outstanding (other than mortgages) supported by Federal deposit insurance are another 15 percent of business liabilities.

The Export-Import Bank

The Export-Import Bank provides direct loans, loan guarantees, and export credit insurance to foreign borrowers to purchase U.S. exports. The objective is to offset foreign official subsidized credit so that U.S. exporters can compete strictly on the basis of the quality and price of the goods and services they offer. Interest rates on Eximbank's direct loans are the lowest permitted under the Arrangement on Export Credits of the Organization for Economic Cooperation and Development.

Eximbank credits finance a small portion of total exports. In 1980, it issued $12.6 billion in export credits, amounting to about 17 percent of all capital goods exports excluding autos. In 1989, $6.3 billion in Eximbank support financed less than 5 percent of capital goods exports. Over the course of the decade, capital goods exports increased by nearly 90 percent. Eximbank programs in 1990 increased significantly from the previous year, from $6.3 billion to $8.7 billion. About half of the $2.4 billion increase was due to a single transaction, a $1.2 billion guarantee for military helicopters to Turkey.

Eximbank sustained large losses over the past decade. In the late 1970s and early 1980s, in order to offer U.S. exporters financing that was competitive with that offered by foreign governments, Eximbank lent at rates well below Treasury borrowing rates, which resulted in operating losses of $2.3 billion between 1981 and 1988. In addition, due to the international debt crisis in the 1980s, Eximbank suffered large losses from an increase in both direct loan defaults and claims on Eximbank guaranteed loans.

International debt problems are likely to continue. To help change these conditions, the Administration proposed the Enterprise for the Americas Initiative (EAI), which involves investment and trade policy changes in Latin America to stimulate economic growth. Eximbank will play a role in the EAI, helping to promote privatization through loan asset sales.

In addition, during the 1980s, the Treasury Department and Eximbank negotiated with foreign governments to move export credit lending rates closer to market rates. These negotiations were extremely successful for loans to developed countries and substantially reduced subsidies for loans to developing countries.

To strengthen the relationship between fees and borrower credit risk, Eximbank began charging higher fees to riskier borrowers in 1987. At the end of 1990, Eximbank increased its loan loss reserve from $3.2 billion to $3.6 billion, equaling 38 percent of the $9.4 billion in direct loans outstanding. It decreased its estimate of recoveries on outstanding guarantee claims from $1.5 billion to $1.3 billion.

Overseas Private Investment Corporation

OPIC provides medium- to long-term financing for international investment at a time when U.S. commercial banks are generally not lending for that purpose unless the customer has extremely high cash collateral or even higher tangible U.S. asset collateral. At the end of 1990, OPIC had $508.2 million in outstanding loans—$63 million direct and $445.2 million guaranteed. Reserves as a percentage of outstanding loans were 21 percent of direct and 107 percent of guaranteed loans.

Default claims on OPIC guaranteed loans have been only 1.4 percent of outstanding loans over the past six years. Generally, guaranteed loans are made to projects sponsored by large U.S. businesses (averaging $5.3 billion a year in gross revenue), and are made for investments in middle- to higher-income countries. Because fee income is market based and claim payments are small, the credit reform subsidy estimate is zero.

OPIC direct loans have a historical loss rate of 12.8 percent. They generally are made to projects sponsored by small businesses (averaging $16.4 million a year in gross revenue), are made for investments in middle-income countries, and have a subsidy estimate of 9.6 percent. From 1991 to 1992, the ratio of direct loans to guaranteed loans will decrease from 16 percent to 7 percent.

OPIC has developed a financial credit rating system for its programs, with ratings of high, medium, low, and unacceptable. Guaranteed loans are generally characterized by a medium to low OPIC credit risk rating; direct loans by a medium to high rating.

Recent reforms include establishing greater accountability among loan officers, creating an independent review function in the Treasurer's office, and reorganizing the Finance Department to allow for closer supervision of credit. OPIC is considering whether to calculate a subsidy estimate for each loan at the approval stage.

Rural Electrification Administration

The Rural Electrification Administration was established in 1935 to bring electrification to rural areas. Telephone assistance was added in 1949, and in 1973 a new lending program was authorized for electric power generation. Currently, REA has over $37 billion in outstanding loans to about 2,000 borrowers. Its electric borrowers provide 11 percent of the total electricity sold in the U.S., and its telephone borrowers serve four percent of total U.S. access lines. For 1991, direct loans are authorized at $1.8 billion.

Interest rates on REA loans were fixed at two percent in 1944—at that time above comparable Treasury rates. However, while Treasury rates have risen greatly since then, the fixed rate on electric distribution and telephone loans has increased only to five percent, yielding borrowers substantial interest rate subsidies. Two percent loans are still authorized to borrowers who demonstrate financial "hardship". Loans to power supply borrowers are made at Treasury rates plus one-eighth percent.

The REA loan program is a clear example of a Federal program that has outlasted its original mandate. The program's goals have essentially been accomplished. Today over 99 percent of rural households have electrical service, and 97 percent have telephone service. Nearly all borrowers can raise funds in private credit markets, without causing a significant increase in subscriber rates. For example, in the past five years over 25 percent of telephone loans have gone to subsidiaries of major telephone holding companies, such as ALLTEL and CONTEL, whose assets and profitability rival Fortune 500 companies. Furthermore, electric distribution borrowers are already required to secure 30 percent of their financing needs from private sources, and have shown no difficulty in doing so. Yet, REA has consistently been denied the authority to refuse loans to any entity that has ever been a borrower, even though many previously rural areas are now suburban in character. REA by statute must lend on a first come, first served basis, and cannot deny applicants loans based on their general funds or cash on hand.

The overall financial health of borrowers is reflected in REA loan delinquency and default rates. For electric distribution and telephone loans, delinquencies are practically zero. Hence, their respective subsidies of 22 percent and 19 percent are due almost entirely to interest rates below Treasury rates.

Loans to electric power supply borrowers do not have interest rate subsidies, as they are made at just above Treasury rates. However, there have been substantial delinquencies among these loans. In the last five years, Government losses from missed payments from these borrowers have exceeded $1 billion, and total losses could reach $3 billion. Many of the delinquent power supply loans went to borrowers that built nuclear power projects that had cost overruns and delayed start-up dates. Some loans were based on projected energy demand growth rates that did not occur. Total REA loan subsidies in 1991 are estimated to be $157 million.

OBRA Reforms.—The 1990 OBRA promises significant reforms in REA lending policy. Electric distribution and telephone loans (excluding those of the Rural Telephone Bank) were reduced 25 percent from baseline levels each year through 1995. More importantly, 90 percent REA guarantees of private loans were authorized for the first time at annual levels equal to direct loan reductions, or $224 million in 1991. While these guarantees are much less than recent Administration proposals, they will demonstrate the viability of guarantees as an alternative option for REA borrowers. In addition, the reforms will for the first time require financial means-testing of borrowers. Healthier borrowers, or borrowers serving areas of greater economic vitality, are expected to receive lesser amounts of their requested financing from direct loans and more from guarantees than do needy borrowers.

Unfortunately, the 1990 farm bill liberalized lending policy for telephone borrowers, such as allowing them to determine their own amortization schedules and forbidding REA to require rate increases as a condition for loans. This will cause more loans to be made at two percent and will reduce repayments of Federal loans. Repeal of these and other farm bill telephone provisions is proposed.

1992 Administration Proposal.—The Administration is also proposing to continue the trend set in OBRA to reduce direct loans and to increase the use of partial guarantees, in order to bring loan subsidies more in line with borrower financial needs. Direct loans for financially needy borrowers will be maintained at $325 million. In 1992, $500 million in power supply loans are proposed to be guaranteed at 90 percent of principal and interest, along with $600 million in 70 percent guarantees for electric distribution borrowers, and $275 million in 70 percent guarantees for telephone borrowers.

The Administration will change regulations to improve security on REA loans. Member distribution cooperatives would be required to guarantee the repayment of power supply loans. When State regulatory bodies deny rate increases to power supply borrowers that they need to repay their REA loans, authority is proposed for REA to preempt these bodies and raise wholesale power rates.

These policies would fulfill the 1973 Congressional policy goal: "that electric and telephone systems develop the ability to achieve the financial strength needed to enable them to satisfy their credit needs from their own financial organizations and other sources". REA borrowers have achieved the necessary financial strength, and loan subsidies should be reduced accordingly.

Small Business Administration

The Small Business Administration (SBA) provides long-term loans and loan guarantees to small businesses and victims of natural disasters. Although most small businesses can borrow from commercial sources, the maturities are generally only three to five years.

SBA provides long-term financing for small companies through its General Business Section 7(a) loan program, and through local and certified development companies and Small Business Investment companies. These three programs constitute 85 percent of SBA's total portfolio and guarantee about one-third of total long-term loans to small businesses. The average SBA guaranteed loan is for $185,000 with a term of 12 years at an interest rate slightly above the prime rate.

Most financial assistance is in the form of commercial loan guarantees. SBA direct lending (excluding disaster assistance) has declined from about $200 million in the mid-1980s to less than $100 million in 1990. Over the same period, guaranteed lending has increased from $2.5 billion to $3.6 billion. It is expected to exceed $4 billion in 1991. About $18 billion of SBA-backed credit is outstanding, one-third of which is direct loans or defaulted guaranteed loans assumed by SBA.

Recognizing Underwriting Risks.—On average over the 1980s, SBA loans have had a cumulative probability of default of just over 20 percent. Nearly $4 billion of SBA's loans outstanding are expected to default with total losses to the Federal Government (net of recoveries) of about $2 billion. If economic activity is weaker than past experience, default losses would be higher.

SBA has begun several studies to identify risk factors affecting SBA loans. It is assessing the financial condition of a number of lending institutions participating in guarantee programs. It is obtaining the services of a financial advisor to evaluate the financial condition of its loan portfolio. And it has started modeling default experience for SBA loans over the period 1980–1990.

From these initial studies, several factors have been identified as influencing the probability of default. Not surprisingly, the probability is lower as more of the loan is repaid, and when employment of the firm is growing. The probability is higher when the loan is large relative to the size of the firm.

While 25 percent of all loans made or guaranteed by SBA before 1985 will eventually default, the rate is lower—about 20 percent—for loans made since 1985. This can be attributed to better lending practices by SBA and the overall health of the U.S. economy in the mid- to late-1980s.

Under current law, the weighted average subsidy rate for SBA's guaranteed loans—about 5 percent—is much lower than the rate for direct loans, which is more than 35 percent. For both direct and guaranteed programs, most of the subsidy is due to loan defaults.

Reducing Underwriting Risks.—The Administration proposes a number of initiatives to reduce the underwriting risks of SBA loan programs. The guarantee of commercial loans under the Section 7(a) program would be reduced from the current average of 85 percent of principal down to 75 percent. This will force commercial lenders to share in the default risk more than under current law, resulting in better lending practices and fewer defaults. In addition, higher fees will be charged to help offset the cost of guarantee programs. These measures will reduce the weighted average subsidy rate for guaranteed loans from about 5 percent to about 1 percent.

In addition, the Administration proposes to convert nearly all direct business lending to loan guarantees because of the very high subsidy rate inherent in SBA's direct loan programs. This will dramatically reduce the cost of these programs, because losses for guaranteed loans are much lower than for direct loans. For disaster loans, the Administration proposes to restrict eligibility to only those borrowers unable to obtain credit elsewhere. In addition, the interest rate would be increased to the Treasury's cost of borrowing. These initiatives would decrease the subsidy rate for disaster loans from 35 percent to 23 percent.

The Administration plans to continue its evaluation of SBA credit programs over the next year in order to gain better information on their relative credit risks. This evaluation will include a detailed study of the performance of recipients of SBA loans and the availability of credit in the private marketplace.

Total GSE borrowing (net)	Net change	115,386	84,627	75,678
	Outstandings	896,635	981,262	1,056,940

[1] For the purposes of this table FAC lending is assumed to equal borrowing. It is netted out under loans (or borrowing) between GSEs.

[2] All SLMA lending financed through the FFB has been counted in Table A–12 as direct loans. All SLMA loans are student loans guaranteed by the Federal Government and therefore the remainder is counted as guaranteed loans in Table A–13 and this table.

VIII.B. IDENTIFYING LONG-TERM RETIREMENT OBLIGATIONS

HIGHLIGHTS

An increasingly large share of the budget is devoted to retirement pensions and health insurance for the elderly.

- In 1992 social security outlays will be $288.6 billion, which is 19.9 percent of total outlays, compared with 15.5 percent in 1970. As a share of the budget, social security outlays should be relatively stable in the 1990s, but will move sharply higher, when the "baby-boom" generation begins to retire in the next century.
- Rapidly growing health care costs are a threat to the long term solvency of Medicare. It is the fastest growing major program in the budget. Medicare spending jumped from $6.6 billion in 1970 to $32 billion or 5.4 percent of Federal outlays by 1980. In 1992, without reform it will be $130.3 billion, which is 9.0 percent of the budget.
- As the population ages, the demand for medical care is likely to continue increasing since the elderly are the most intensive users of medical services. Under current mid-range assumptions, Medicare's Hospital Insurance (HI) Trust Fund will be insolvent by 2006.
- Medicare's Supplemental Medical Insurance Trust Fund (SMI), which pays for outpatient care, does not face insolvency since it is funded on a pay-as-you-go basis; but if its steep growth rate continues, substantially greater contributions from general revenue will be needed to continue its current level of services.

Aside from social security and Medicare, the Federal Government's largest annuity programs are for its own civilian and military retirees. Outlays for these programs will total $64.2 billion in 1992.

- Legislation enacted in the mid-1980s required that expected pension costs be charged to agencies as they accrue for new civilian and all military employees. Prior to that, employment costs were understated.
- Many nonmilitary employees hired before the passage of this legislation are still covered under pension systems that only partly account for accruing obligations. The Government also offers health benefits for its retirees in addition to those provided under medicare. This too is an accruing obligation that is not now reflected in agency budgets. The Administration supports the principle of charging agencies the full current cost of such accruing obligations. Doing so would provide the agencies with information and incentives to control costs.

Enactment of the Omnibus Budget Reconciliation Act of 1990 (OBRA) was an important step toward constraining the growth of Government spending and limiting the budget deficit. The deficit will be lower in the future than it would have been otherwise.

- The Act removed the receipts and outlays of the two social security trust funds from the calculation of the Federal deficit targets, and adopted the principle that future social security tax and benefit changes should not worsen the actuarial conditions of the trust funds.
- These reforms promote the goal of the "Social Security Integrity and Debt Reduction Plan" proposed in last year's Budget. They are designed to channel future social security surpluses into added national saving that can be used to increase capital formation and raise productivity.
- OBRA also improved the outlook for Medicare by constraining its costs and enhancing its receipts.
- The 1992 budget proposes to increase Medicare efficiency through reforms that constrain increases in payments for se-

lected hospitals, physicians, and related services.

- Medical liability costs have helped to fuel the rapid growth in medical costs and have encouraged the practice of defensive or unnecessary medicine. The Administration will propose a package of liability and quality of care reforms to address these issues.

MEASURES OF ACTUARIAL DEFICIENCY

Actuaries use at least three different methods to determine whether an actuarial deficiency exists in an annuity program: accrued to date, closed system, and open system. These methods differ in the assumptions they make about the annuity program's future income and obligations.

Accrued to Date.—One method that is widely used in the private sector computes a program's deficiency as of the date of the calculation, assuming that it will incur no further obligations and receive no future income. The present value of benefits due to past and present employees is calculated based solely on their service to date. The result is then compared to the present value of the program's assets to see if the assets satisfy minimum funding levels.

This method is appropriate for annuity programs that face the risk of immediate termination should a sponsoring business firm be forced into bankruptcy. It is, however, less relevant for Government plans, where the sponsor of the program can be assumed to continue in existence indefinitely. A more appropriate consideration for Government plans is the extent to which plan income will be sufficient to meet the plan's commitments. To answer this question requires a deficiency concept that takes into account future as well as past income and obligations.

Closed System.—This method computes the present value of all expected future benefits due to current and past employees. Unlike the first method, this adds the present value of the benefits current employees will earn in their remaining years before retirement to the value of the benefits to which they are already entitled in computing pension plan liabilities. Similarly, it adds the present value of their expected future contributions and those made on their behalf to plan assets. The difference between the present value of benefits and assets computed in this way is the actuarial defi-

Table B–1. ACTUARIAL DEFICIENCIES OF RETIREMENT ANNUITY PROGRAMS[1]

na = Not available.

[1] The actuarial deficiencies shown here are not fully comparable; they differ in their underlying economic assumptions. These differences do not affect the order of magnitude shown in the table.

[2] These retirement programs include Coast Guard Military, Public Health Service Commissioned Corps, State Department Foreign Service, and the Central Intelligence Agency Retirement and Disability System.

ciency. Although this concept is broader than the first, it too is a closed-system calculation in that only current and past employees are considered, even when there is certain to be future enrollment in the program.

Open System.—Under this method, the plan's liabilities equal the discounted present value of all benefits due to past, present and future workers. The difference between this grand total of plan liabilities and the value of the plan's assets, including the present value of all expected future contributions to the plan, is the actuarial deficiency.[1]

Magnitudes of Actuarial Deficiency.—For social security, the deficiency is $7.1 trillion under a closed-system calculation and $1.2 trillion using the open-system approach. Both calculations use the same economic and demographic assumptions. The lower estimate is more meaningful since it takes account of all prospective receipts and outlays over the next 75 years. The social security system is firmly established and it is reasonable to assume that it will cover future workers, as well as those currently employed. According to the social security actuaries' mid-range projections, future social security payroll taxes, the income tax paid on some social security benefits, and the interest earned by the trust fund assets will cover most, although not all, of the cost of future benefits. This is reflected in the open-system calculation of the deficiency.

For medicare hospital insurance, the Treasury, in its most recent report, shows an actuarial deficiency of $312 billion as of 1989, calculated on an open-system basis. In this program, rising hospital costs and increasing usage compound the effects of an aging population.

The actuaries for the Federal civilian and military retirement programs report closed-system calculations in their annual reports required by Public Law 95–595. For the large Federal retirement programs, the open-system calculation is identical, in principle, to the closed-system deficiency as discussed in the footnote. Future employees will enter systems in which the present value of their own contributions, plus those made on their behalf by their agency, will exactly match the present value of their future benefits.

Based on closed-system calculations, the Civil Service Retirement System (CSRS) had an actuarial deficiency of $643 billion as of 1989, while that of the military retirement fund was $513 billion. If the CSRS system were to begin to be fully funded for all future service, the actuarial deficiency would be $100 billion less. The new retirement system for civilian employees, the Federal Employees Retirement System (FERS), had a small deficiency due to the transfer of some employees from CSRS to FERS. These employees had previously accumulated some unfunded retirement benefits under the old system.

The actuarial gap in the military retirement fund is attributable entirely to those employees with military service before 1985. Pension costs for military service since 1985 are paid to the military retirement funds and are fully recorded in the budget currently. The costs of the partly unfunded pensions for older military personnel are being gradually amortized through 2043.

Two qualifications to the analysis above are worth noting. First, even those annuity programs that are fully funded and with no actuarial discrepancy, are not necessarily adding to national saving. Agency outlays for accruing pension obligations are matched by offsetting intragovernmental receipts to the trust funds, so changes in recorded outlays have no effect on the deficit. The deficit is neither larger nor smaller whether or not the annuity programs are fully funded. Yet if the Government is to add to national saving, it must reduce its deficit.

Second, the Government will have to meet future pension and medical care costs as they occur, out of future resources, even for fully funded programs. Funding the plans currently gives a better idea of what these programs cost, but it does nothing to reduce the future burden of these obligations unless accompanied by an increase in saving.

---

[1] Although conceptually distinct, the open-system calculation will give an answer identical to the closed-system calculation if the benefits due to future employees are exactly balanced by expected future contributions either made by them or on their behalf. In this case, the added liabilities due to future workers are exactly matched by the asset value of their expected future contributions to plan income. Nothing is added to the deficiency by taking their claims and contributions into account.

PUBLIC ANNUITY AND HEALTH INSURANCE PROGRAMS

Government-sponsored funds help to protect the public from the risks of old age and disability through social security. For the elderly, it also insures against hospital expenses and the costs of other medical services through medicare. These programs are nearly universal in their coverage. The Government has also taken responsibility for preserving the railroad retirement pension program, which operates both as a substitute for social security and as a private pension plan.

Social Security

Social security consists of Old-Age and Survivors Insurance (OASI) and Disability Insurance (DI). Total spending on these two programs is estimated to be $288.6 billion in 1992. This is sharply higher than the $92.1 billion (1992 dollars) spent in 1970. The rising trend in retirement costs is partly due to more generous benefits. It also reflects the aging of the Nation's population, the doubling of the number of DI beneficiaries, and an increased tendency for early retirement.[2]

At age 65, men can now look forward to 15 additional years of life; as recently as 1970, they could only expect to live 13 more years. Over the same period, life expectancy at 65 for women lengthened from 17 to 19 years. Meanwhile, the proportion of men who retire before reaching age 65 has nearly doubled. The shift to earlier retirement increases the number collecting benefits while reducing the number paying taxes.

As in the past, long-term demographic and economic changes will largely determine the future financial condition of the social security trust funds. Nearly 80 million Americans were born during 1946–1964. These "baby-boomers" are now entering their prime working years, when their incomes will be at their highest. While they work and pay taxes over the next two decades, the social security trust funds should grow dramatically. But beginning around the year 2010, the "baby-boomers" will start to retire in large numbers and, as they do, they will claim more of the funds' resources.

The social security actuaries regularly estimate receipts and outlays 75 years into the future, based on alternative economic and demographic assumptions. According to their latest mid-range assumptions, the funds' tax receipts are expected to exceed outlays from now until the year 2018. Total fund receipts, including interest, are expected to run ahead of outlays for another decade so that the reserves in the trust funds peak around 2029. Following that year, the funds are drawn down. They are estimated to be exhausted by the year 2043.

A separate review of the DI trust fund alone would be less optimistic. Workers and employers pay 0.6 percent of taxable payroll to the DI trust fund. On mid-range assumption, the DI fund will become insolvent by 2020.

The long-run actuarial deficiency in the trust funds and other indicators of their financial status are highly sensitive to the particular assumptions made in projecting future income and outgo. The indicators could easily be much more or much less favorable than they are under the mid-range projections. In order to evaluate the future financial status of the trust funds, it is necessary to project population growth, the retirement age, and productivity. There is great uncertainty in each of these areas. The following is a brief review of some considerations that are helpful in evaluating these projections.

Population Growth.—The Social Security Trustees' mid-range projections (known as alternative II–B) envisage a slow rate of population growth. Under these assumptions, the population growth rate drops from 1.00 percent a year in the 1980s to a negligible 0.03 percent by the middle of the next century. This pronounced slowdown reflects low estimates for both fertility and immigration and a limited increase in life expectancy. Of these three, the low birth rate has the largest effect on future population growth.

---

[2] During the 1970s, DI benefit awards grew explosively; the number of beneficiaries increased from 2.7 million to 4.7 million and the cost of the program quintupled, rising from $2.8 billion to $14.9 billion (in constant dollars). In response, Congress mandated new evaluation procedures to screen beneficiaries in the early 1980s. Subsequently, program participation declined slightly, but since 1984, the number of beneficiaries has consistently increased.

The Trustees' mid-range assumptions extend forward the low birth rates of the 1970s and 1980s. Fertility is projected at 1.9 births per woman, only slightly above the postwar low of just 1.8 births per woman in the mid-1970s, and well below the postwar peak of 3.7 births. Fertility, however, has been on an upward trend in recent years. In 1990, an estimated 420,000 more babies were born than assumed in alternative II–B.

Economic factors could lead to even higher future birth rates. A large birth cohort such as the postwar baby-boom faces many problems due to crowding in the labor market, schools, even within the family. By having fewer children of their own, the baby-boomers were able to raise each child's future prospects. But these children, facing more favorable circumstances, will have less reason to limit their own family size. Economists who study population dynamics believe that population growth has cycled in the past for this reason, and it could rebound again as the children of the baby-boom begin to raise families of their own.

Medical advances have extended the time women are able to bear children with an ensuing rise in births among women over 35. The expanded availability of nonparental care arrangements, which give women more opportunity to combine motherhood with a career, also favors a rise in the birth rate. Finally, new procedures to increase the probability of conception could boost fertility.

Immigration is estimated to be about 675,000 people per year. The II–B assumptions project a constant rate of immigration near this level for the next 75 years. That contributes to the projected slowdown in population growth occurring in the next century. Immigration has been on a rising trend for decades, and the new immigration law raises the limits that were in place when the Trustees' assumptions were last revised.

Longevity also affects population growth. When people live longer, the population is larger. The II–B assumptions project a continued improvement in longevity, but less rapid than in recent decades. The biotechnology revolution and lifestyle changes are reasons for thinking that a faster rate of improvement is possible. Unlike higher birth rates and more immigration, increased longevity raises social security expenses and diminishes the balance in the trust funds.

Retirement Age.—The Trustees' II–B assumptions project continuing declines in labor force participation by the elderly in a straightforward extension of trends over the past few decades. Longer lifespans, however, could encourage delayed retirement as workers stay on the job longer in order to finance extra retirement years. It takes about 6 more months of work to provide the same retirement cushion when life expectancy increases by two years. Improvements in health are also likely to accompany increases in longevity, and these could permit some workers to keep their jobs who now retire because of poor health.

The social security reforms of 1983 also may have an effect. They increased the age at which full benefits are available from 65 to 67 and reduced the early retirement benefit, changes that will be phased in gradually over the next quarter century. There is also a larger credit for delayed retirement. These reforms could contribute to an increase in the retirement age, but most estimates suggest they will have only a modest effect.

Productivity.—Labor productivity is assumed to rise at an average rate of 1.65 percent per year over the 75-year forecast period. Although this is well within the range of past U.S. experience, it exceeds the average rate of improvement over the past 20 years. From 1909 to 1989, productivity grew at an average rate of 2 percent per year. Since the end of 1969, however, it has only grown by 1.2 percent per year.

The risk that slower productivity growth poses to the trust funds would be reduced if the projected social security surpluses were actually saved. One rough calculation suggests that the extra investment this saving could generate might increase the rate of business capital formation by as much as three-quarters of a percentage point per year over the next 20 years, thereby adding about one-quarter percentage point to average productivity growth.

To allow for such uncertainties, the Trustees' report presents alternative assumptions bracketing the mid-range path. Alternative I is the optimistic projection. It assumes a fertility rate

Table B–2. **ALTERNATIVE INDICATORS OF SOLVENCY FOR OASDI**

Trustees' Alternative Assumptions	I	II–A	II–B	III
Beneficiaries per 100 covered workers in:				
2015	34	37	37	41
2040	44	52	53	64
2065	41	55	56	80
Income rate minus cost rate as a percent of taxable payroll in:				
2015	2.50	1.12	0.64	−1.23
2040	0.53	−2.69	−3.40	−7.99
2065	1.24	−3.42	−4.16	−12.42
Actuarial deficiency (−) as a percent of taxable payroll:				
25 years	3.40	2.58	2.17	0.77
50 years	2.11	0.69	0.17	−1.83
75 years	1.76	−0.31	−0.91	−3.87
Present value of actuarial deficiency (−) in billions of dollars:				
25 years	1,834	1,331	1,091	353
50 years	2,151	656	160	−1,499
75 years	2,557	−403	−1,174	−4,219

of 2.2 births per woman, and that immigration will be greater than in II–B. Longevity does not improve as much in alternative I. Shorter lifespans strengthen the trust funds, so it is "optimistic" to assume that they increase less than in II–B.

Alternative III is the pessimistic scenario. The birth rate and immigration are lower than in II–B while longevity improves more. Alternative II–A makes the same demographic assumptions as in II–B, but assumes a higher path for productivity.

Table B–2 shows the effect of these alternatives on some measures of social security solvency. The 75-year actuarial deficiency swings from a present value surplus of $2.6 trillion to a deficit of $4.2 trillion as one goes from the optimistic to the pessimistic alternative. The combined trust funds would be exhausted in 2023 under alternative III, in 2043 under II–B, and in 2056 under II–A. Under the optimistic assumptions of alternative I, the funds remain solvent throughout the 75-year projection period.

The risks that the funds will eventually tip into deficit appear to be somewhat greater than the chance that they will always maintain a surplus, but a deficit is not a certainty. Policies that promote thrift, capital formation, and productivity growth reduce the chance of a permanent shortfall.

Recent Changes in Social Security.—In 1985, social security was removed by law from the Federal budget, but the surplus in the trust funds continued to be counted toward deficit estimates and calculations for purposes of sequestration under the Gramm-Rudman-Hollings Act. The Budget Enforcement Act of 1990 removed the OASDI trust funds from the future deficit targets as well. The Act also includes "fire wall" provisions intended to make it difficult to spend the projected buildup of reserves on higher benefits or lower social security taxes.

The "fire wall" is necessary protection if the surpluses are to add to national saving, but it is not sufficient. The growing balance in the trust funds must be matched by an equal improvement in the consolidated budget deficit beyond what would have otherwise occurred. The real test is whether the consolidated Federal deficit is reduced relative to what it would otherwise have been. Unless the consolidated budget deficit declines in this way, the surpluses in the trust funds will not be truly saved regardless of accounting conventions.

If the "fire wall" works and if the rest of the budget is gradually brought into balance, the surpluses will be used to reduce publicly held Federal debt, add to private capital formation, and increase real GNP. It is not possible to avoid the extra costs that are looming in the future when the baby-boom generation retires, but it is possible to prepare to meet them by saving more now. OBRA is a step in that direction.

The most significant change made in social security by OBRA was to add over two million State and local government employees not covered by separate retirement plans into social security and medicare as of July 1, 1991.

Medicare

The long-term ability to finance health care for the elderly is at risk, as indicated by the actuarial deficiency in the Medicare HI Trust Fund discussed in the previous section. An increasingly older population and rapidly growing health care costs place demands on the Medicare trust funds that need to be addressed. Medicare costs have increased an average of 11.4 percent each year since 1980. The budget proposes a number of modest policy changes to help bring costs under better control.

The Federal Hospital Insurance (HI) Trust Fund is financed primarily through a payroll tax and interest earned on Trust Fund reserves. The 1.45 percent HI tax applies to both employers and employees up to a limit of $125,000 a year on taxable wages. During 1990, HI covered 30 million aged and 3 million disabled enrollees with total outlays of $64.1 billion. Medicare's other trust fund is the Supplementary Medical Insurance (SMI) Trust Fund. It pays for physician and outpatient care and is financed 25 percent by enrollee premiums and 75 percent by general revenues. During 1990, 32 million people were enrolled in SMI and total outlays amounted to $43.0 billion.

Despite significant cost containment measures enacted in recent years, *The 1990 Annual Report of the Board of Trustees of the Hospital Insurance Trust Fund* states that the HI trust fund will become insolvent in 2003 under intermediate economic assumptions. Health Care Financing Administration (HCFA) actuaries estimate that provisions of the 1990 Omnibus Budget Reconciliation Act may extend the life of the HI trust fund by three years. Bringing the HI trust fund into actuarial balance over the next 25 years would require that income be increased by 21 percent, outlays be reduced by 27 percent, or some combination of the two. Although the SMI fund does not risk insolvency, its rapid growth has caused outlays to nearly double in the past five years—from $22.7 billion in 1985 to $42.2 billion in 1990. If the current rate of growth continues, a substantial increase in general revenue contributions will be needed. Under current growth assumptions, general revenue contributions will need to double between 1990 and 1996, from $33.2 billion to $68.7 billion, and premiums will also rise; but not as quickly, thus increasing slightly the Federal share of Part B financing.

Spending on Medicare in 1992 will be $127.3 billion, 11.9 percent over 1991 spending levels. In order to improve program efficiency, the budget proposes to constrain increases in payments for selected hospital, physician, and related services. Even with these reforms, spending on hospital services (Medicare Part A) will rise by $5.2 billion and spending on physician and related services (Medicare Part B) will rise by $5.2 billion in 1992.

Expanding Coordinated Care.—Coordinated care programs such as health maintenance organizations (HMOs) and preferred provider organizations (PPOs) have shown great promise in providing efficient high quality care at lower cost than traditional fee-for-service medicine. By contracting directly with providers to offer integrated services, beneficiaries receive quality care at lower cost. The President's budget proposes a new "point-of-service" option for Medicare beneficiaries and includes initiatives to expand enrollment in HMOs.

More than one-quarter of all working Americans and their dependents receive coverage through HMOs and PPOs. In staff and group HMOs, a group of primary care and specialist physicians provide the full range of care to plan enrollees. PPOs typically contract with a group of providers (physicians, hospitals, clinical laboratories, etc.) who offer to care for more enrollees at reduced prices. PPO enrollees, by sharing in the lower costs, have an incentive to use network providers.

A recent development has been the introduction of point-of-service choice (POS) in coordinated care systems. A POS option permits enrollees to choose on a service-by-service basis whether to receive care from a selected POS provider or, alternately, from any other provider of their choice. The budget proposes to create a POS option for Medicare beneficiaries.

The budget also contains new initiatives to expand enrollment of Medicare beneficiaries in HMOs. Program rules make it difficult for some Medicare beneficiaries to enroll in HMOs. Enrollment periods for newly-eligible Medicare beneficiaries are limited and retiree groups have only limited opportunities to enroll in HMOs. Legislation will be proposed to allow Medicare HMOs, at their own option, to enroll new beneficiaries on an open enrollment basis, and to serve retiree groups exclusively.

Improving Quality.—The budget continues the Administration's efforts to improve the quality of care for Medicare beneficiaries. While the quality of health care in the United States remains second to none, it has shortcomings. Hospitals and physicians lack effective systems for monitoring the quality of care, so they do not receive early warning of possible problems.

Last year, the Institute of Medicine (IOM) completed a study on improving quality assurance in Medicare. It recommended that hospitals use data on patient outcomes (morbidity and mortality) to monitor and improve quality. The IOM also recommended that Medicare's peer review organizations (PROs) shift their emphasis to aiding hospitals improve quality.

Over the past several years, the Health Care Financing Administration has been developing a state-of-the-art monitoring system that could realize the IOM's vision. Called the Uniform Clinical Data Set (UCDS), it can be used to track medical care outcomes. The UCDS will allow users to account for differences in severity of illness through detailed clinical adjustments. With this refinement, outcomes data can be used in a reliable manner to monitor and compare quality. The system will be used initially to guide external quality review by the PROs. Ideally, hospitals would establish similar systems and take the initiative in quality improvement. Eventually, with real-time reporting, computer-based expert systems could identify problems before patients have suffered harm.

Part A Program Changes.—Teaching hospitals receive "add-on" payments originally meant to compensate for their higher costs when compared to non-teaching hospitals. Studies by the General Accounting Office (GAO), the Inspector General, the Health Care Financing Administration, and the Congressionally-established Prospective Payment Assessment Commission (ProPAC) all indicate that the proper rate for the indirect medical education (IME) add-on is less than the legislated rate. Payments are substantially higher than average costs for serving Medicare patients. As a result, teaching hospitals have significantly higher Medicare profit margins than any other category of hospital. Different approaches have been proposed to establish equitable rates, ranging from an immediate reduction to a multi-year phase-down.

Teaching hospitals' higher costs arise from a mix of poorer and more severely ill patients. Over time, these two factors have been increasingly accounted for through other more explicit payment mechanisms. Recent expansions in the disproportionate share payment (DSH) now provide significant additional resources to hospitals whose patients are disproportionately poor. Medicare's case-specific payments make up for most of the severity-of-illness differences. As a result, the IME factor is too high. A recent ProPac analysis suggests that a rate of 3.2 percent—compared to the present rate of 7.7 percent—is appropriate. Even this analysis, conducted prior to the significant OBRA expansions of the DSH payment, likely overstates the appropriate adjustment. In its 1990 report, ProPAC recommended that a five-year phase-down of the rate occur only after a careful review of the financial condition of teaching hospitals.

The budget adopts the five-year phase-down with a 1996 rate of 3.2 percent. Because of OBRA DSH expansions, an immediate reduction from 7.7 percent to 4.4 percent is proposed for 1992. The budget also proposes to substitute a hospital's average daily census of patients for total beds in the formula used to compute the IME adjustment. This should limit Medicare's exposure to any inappropriate manipulation of the IME formula.

Other program changes to put providers on an equal footing will move the annual hospital payment update to January 1st and eliminate the guaranteed payment of return on equity for proprietary skilled nursing facilities (SNFs). In the past several years, Congress has delayed the yearly update in hospital fees. Moving the hospital update to January 1st is consistent with this practice and will put hospitals on the same update cycle used for most other providers. Proprietary SNFs are the only class of provider for which the return on equity is guaranteed by Medicare; elimination of these payments puts proprietary SNFs on the same footing as all other facilities.

Finally, the budget proposes to change the method used for computing the limits on home health costs. Currently, Medicare caps only the total payment to home health agencies (HHAs) for all HHA services. In billing Medicare, HHAs can offset costs exceeding the limit for one type of visit with amounts below the limit for other types of visits. This approach creates incentives for inefficient use of the range of covered visits. In a recent study, GAO determined that setting type-of-visit, or per-discipline cost limits would have little adverse effect on home health agencies or beneficiaries. The budget proposes restructuring HHA payments caps in this way.

Part B Program Changes.—One set of proposals will encourage hospital outpatient departments (OPDs) to become more efficient while helping to establish a level playing field for OPDs, ambulatory surgery centers (ASCs), and physician offices. These proposals would also strengthen the incentives for appropriate use of clinical laboratory tests at little or no net cost to beneficiaries. These proposals address four problems:

- Most OPD services are still paid partly on a cost basis more than seven years after inflationary cost-based payments for inpatient hospital services ended. Partly as a result, outlays for OPDs have increased rapidly—by almost 17 percent a year during the 1980s.
- Cost-based payment perpetuates an uneven playing field. Payment rates and the method used to determine the rates vary widely for ambulatory surgery, diagnostic tests and x-rays depending on where the service is provided. ASCs and physician offices are paid on a prospective fee schedule basis. OPDs are paid based on a blend of prospective rates and costs. This hodgepodge reflects the accidents of history, rather than any well considered policy. It obviously makes no sense to pay sharply differing amounts for the same service.
- Medicare beneficiaries pay substantially more in coinsurance for the same service provided in an OPD than in an ASC or physician's office. Coinsurance payments are set equal to 20 percent of the hospital's billed charge instead of 20 percent of the Medicare payment rate. Because hospital charges have been increasing rapidly, coinsurance for OPD services are substantially higher as a result.
- Coinsurance does not apply to clinical lab tests even though there is a 20 percent coinsurance on all other Part B services. As a result, physicians and beneficiaries have less reason to be mindful of the cost of lab tests. Perhaps for this reason, outlays for clinical lab tests have increased by more than 20 percent a year since 1985 when coinsurance for tests was eliminated.

To address these problems, the budget proposes a uniform set of payment rates in all settings for surgery, diagnostic tests, and x-rays. Rates would be set prospectively to encourage efficiency. Coinsurance for OPDs would be based on the new prospective rates, reducing out-of-pocket costs for care provided in this setting. This, in turn, would permit restoration of coinsurance for clinical lab tests at little or no net cost to beneficiaries.

Because of the major changes in the scheduled January 1992 implementation of Medicare's new fee schedule for physician services, the budget contains only a limited number of proposals affecting physician payment.

- Currently, Medicare pays substantially more for anesthesia provided by a nurse/physician team than for anesthesia provided directly by a physician. This makes little sense because cost-effective delivery of care is one of the main potential advantages from employing non-physician practitioners. The budget would correct this problem by limiting payment for medically directed nurse anesthetists to the prior budget neutral rates and reducing payment for the supervising physicians to keep the total payment for the team within limits.

- A similar policy would limit payment for surgeons, when the surgeon elects to use an assistant. Use of surgical assistants is often a matter of convenience and personal preference rather than a matter of medical necessity. A number of studies have documented wide and unexplained variations in the use of surgical assistants.
- A technical correction to the formula for the Medicare Volume Performance Standard (MVPS) is needed for 1991. This reduces the MVPS for 1991 to 2 percentage points below 1991 baseline expenditure growth, as apparently intended by the Congress.

Other changes in physician payment are also included in the budget. Duplicate fees for laboratory specimen handling will be eliminated. Resource-cost based fee schedule rates for the technical component of radiology and diagnostic tests will be implemented.

Finally, the budget contains a number of other miscellaneous changes. These include a number of revisions of payment rules for durable medical equipment (DME). One of these changes would reduce payment for home oxygen therapy by five percent to reflect the recent trend toward increased use of oxygen concentrators and away from oxygen tanks which are more costly.

Standardizing Medicare Secondary Payer Provisions.—The budget proposes to amend the Medicare secondary payer (MSP) provisions for the disabled and for end stage renal disease (ESRD) beneficiaries by making Medicare secondary to those employer group health plans covering at least one employer with 20 or more employees. Standardizing the group health plan size for the disabled and ESRD beneficiaries would simplify administration of group health plans and shield small employers from the potentially high costs of providing health care coverage for ESRD beneficiaries without cost to beneficiaries.

To ensure the proper sequence of payment for health care, the budget includes $5 million to establish a Clearinghouse for Third Party Liability, located centrally in the Department of Health and Human Services. The Clearinghouse would identify beneficiaries of Federal health programs who are simultaneously enrolled in employment-based health care plans. This information would be available to fully Federally funded health programs, like Medicare, and, on a mutual basis, to administrators of Federally-assisted health coverage like Medicaid. Employment-based health insurance would be identified by having employers report basic health insurance information to the Federal government on the employees' Wage and Tax Statement (W–2). The Social Security Administration which receives a copy of the statement, would process the data for the clearinghouse. Beneficiary health insurance data would be searched before Federal funds are used and the health care bill would be forwarded to be paid by the appropriate health insurer.

Medical Professional Liability Reforms.—From 1984 to 1988 medical malpractice premiums rose from approximately $1.9 billion to $4.2 billion. This has led some physicians to alter their behavior in an effort to avoid liability—often choosing to discontinue high-risk practices or to engage in unnecessary defensive medicine. Growing liability costs and unnecessary defensive medicine contribute to high health care costs that are a problem for everyone.

The Administration's reform package will include proposals that encourage States to:

- Cap the amount of allowable non-economic damages. In the 26 States that have limited total damages, malpractice rates have declined significantly;
- Eliminate joint and several liability for noneconomic damages;
- Eliminate the collateral source rule that allows for double recovery;

- Require structured payments for malpractice awards, as opposed to lump sum payments;
- Promote pretrial alternative dispute resolution, including mediation and pretrial screening panels, to encourage reasonable settlements;
- Implement procedures to enhance the quality of care.

Additionally, at the Federal level the Administration will propose to apply these tort reforms to Federal courts; to begin a pilot program in the Federal Employees Health Benefits Program that offers alternative dispute resolution; and to improve the quality of medical care through enhanced effectiveness research and improved peer review.

To avoid preempting State laws and to encourage States to adopt liability reforms within a reasonable three-year time period, the Administration will propose to initiate, beginning in 1995, budget neutral incentive pools in Medicare and Medicaid.

Under the proposal, the Department of Health and Human Services would pool:

- A portion of the annual increase (1 percent of total payments) in Medicare prospective payments for hospitals—approximately $800 million in 1995;
- A portion (2 percent) of the State Medicaid match for staff salaries and expenses. State match rates average 53 percent. This pool would amount to approximately $90 million in 1995. The proposal does not affect Medicaid provider reimbursement.

States that adopt a requisite number of reforms would share in the pool. Those States would receive enhanced Medicaid administrative match rates and their hospitals would receive supplemental payments. This structure provides incentives for the States to quickly adopt reforms—the States that act first will receive a reward, as will the State's hospitals.

Railroad Retirement Board

With three retirees for every rail employee—the exact opposite of social security's ratio—the rail pension system stands on shaky ground. Between 1945 and 1980, the number of employees fell by 68 percent. In the last decade, rail employment plummeted an additional 42 percent. This trend is expected to persist as railroads discover technologies that reduce operating and labor costs. Declining employment, past under-funding by the rail sector, and inadequate financing plans have taken their toll on the rail pension system which has an unfunded liability of $34 billion. The Railroad Retirement Board's (RRB) chronic financial shakiness persists despite a number of Federal subsidies. The RRB has been rescued from insolvency by the Congress five times in the last 16 years.

The major change enacted by OBRA that affects the RRB was an additional $384 million Federal subsidy to the rail pension funds for fiscal years 1991 and 1992. When the RRB was on the verge of insolvency in 1983, the pension system was allowed temporarily to keep Federal income taxes on private pension benefits for five years, or until it had received $877 million, whichever came first. This temporary subsidy was repeatedly extended up through October 1992. The Administration strongly opposed each of these extensions which, when added to other Federal subsidies, could exceed $3 billion by the year 2000.

The Administration concurs with the Railroad Retirement Reform Commission's recommendation that rail workers and their dependents be entitled to the same social security benefits as those who are covered by the Social Security Act. Legislation to ensure that rail families receive basic social security benefits, to which some are not now entitled as a result of exclusions in the Railroad Retirement Act, will be transmitted to the Congress. This proposal is discussed in Chapter V.C. "Distributing Federal Benefits More Fairly."

Overall Conclusion

Each of the programs reviewed in this section faces risks. The Railroad Retirement program has the most immediate problem. As currently structured, it would be unable to meet its current obligations without Federal assistance. Neither Medicare nor social security is in immediate danger of insolvency. Rising medical costs and an aging population will deplete Medicare's Hospital Insurance trust fund within 16 years according to current projections unless further action is taken. Social security is in the least danger. But one component of social security, the disability insurance trust fund, is projected to run out of money in 30 years.

FEDERAL EMPLOYEE RETIREMENT AND HEALTH

In the 1980s, both civil service and military retirement were changed. The new programs require full funding for accruing retirement benefits due newly hired civilian employees and all military employees. There still exists, however, a large unfunded liability for previously hired employees. Furthermore, agencies are not charged for the Government's accruing health care costs for any of its future retirees.

This year, the Office of Management and Budget will study the possibility of recording in the budget all currently accruing pension program and retiree health care costs. The purpose of this reform would be to improve management incentives and better inform Congress and the executive about budget tradeoffs.

Civilian Retirement and Disability Annuities

The Civil Service Retirement and Disability Fund covers about 90 percent of all Federal civilian employees, including civilian employees of the Department of Defense. Total outlays in 1992 are estimated at $35.0 billion. The fund operates two distinct civilian pension systems. The Civil Service Retirement System (CSRS) includes civilian employees who were hired before 1984 and chose not to transfer into the new Federal Employee Retirement System (FERS). The new system covers employees hired since 1984, plus any previous hires who chose to transfer. The old system will gradually be phased out of existence, but the phase-out may take a century to complete. The income, outgo and assets of both systems are commingled.

Under CSRS, employees and their agencies each pay an amount equal to 7 percent of the employee's salary toward the accruing cost of future retirement benefits. The total actuarial cost is estimated at about 28 percent of payroll, so these contributions finance only half of the total cost. That is why the actuarial deficiency of CSRS under a closed-system calculation, including estimated benefits based on future service of current CSRS employees—$643 billion—greatly exceeds the deficiency based on benefits earned to date—$409 billion. FERS, by contrast, charges the full accrual cost, not just part, and the agency contribution is reflected in agency budgets.

OBRA eliminated the 50/50 lump-sum option for the return of retirees' contributions for all employees retiring after November 30, 1990, except those who are involuntarily separated or critically ill. A one-year extension is allowed for employees mobilized as part of Desert Shield. OBRA requires the Postal Service to pay the COLAs of post-1971 annuitants, including partial reimbursement to the Federal Government for COLA liabilities already paid. The Budget proposes full reimbursement for the past COLAs of these annuitants.

Military Retirement and Disability Annuities

Military service pensions were financed before 1985 from annual general fund appropriations. Public Law 98–94 established fully funded accrual accounting for military retirement starting in 1985. This includes new service from employees hired before 1985, as well as new hires. Under this law, the Defense Department pays the normal cost of the system and the general fund makes payments from general revenues to amortize the unfunded liability, estimated at $591 billion in 1992 for pre-1985 service.

The Military Retirement and Disability Fund was created as part of the change in 1985 to finance pensions and disability payments for career retirees, their survivors and dependents. The fund has three major income sources: (1) The Board of Actuaries for the fund determines what percentage of basic pay is necessary to fund fully all future benefits resulting from current military service. This percentage is charged to the payroll of the Defense Department (or other employing agency) and paid to the fund. Total charges to agencies were $16.3 billion in 1990 and are projected to decline to $16.2 billion in 1992 as the size of the military force declines. (2) The general fund makes an annual payment to the fund of an amount adequate to pay off the unfunded liabilities by 2043 for pension rights earned before the fund was established. This amount was $10.6 billion in 1990. (3) All balances in excess of current cash requirements are invested in Treasury securities which earn interest.

The fund's income greatly exceeds disbursements for current retirees ($12 billion in 1990), but the surplus will erode as the proportion of retirees increases. Actuarial projections show the ratio of retirees to military personnel rising from 68 percent in 1992 to 88 percent in 2030.

Charging the Defense Department for current accruals rather than current cash pension benefits results in improved cost accounting and more accurate trade-offs between military personnel costs and other types of expenditures. In 1992, as noted, accrued costs will total $16.2 billion. With the appropriate accounting, managers must consider full personnel costs when making resource decisions, and thus be encouraged to employ resources efficiently. The accrual system's incentives have also induced Congress to reform military pensions since immediate accrual savings result from benefit reductions.

The Administration is also considering a proposed change to the current approach used for computing military retirement accruals. This change would allow the accruals to reflect actual personnel retention, pay and interest rate experience more quickly and accurately. Separate accrual rates would be developed for officer and enlisted personnel in each of the Services. This will improve the estimates of Defense retirement accrual costs and will increase incentives for efficient personnel management. To allow sufficient time for appropriate study of these accrual changes, the budget shows the expected effect beginning in 1994.

Other Annuity Programs

Over 90 percent of all Federal civil and military career people belong to one of the major pension programs discussed above. There are, however, some smaller pension plans for specialized groups of employees, such as the foreign service, Coast Guard military personnel, and the Public Health Service commissioned officers. Some plans are fully funded, while others remain on a pay-as-you-go basis.

The budget proposes again this year that the Public Health Service Commissioned Officers Retirement Fund be converted to an accrual-based accounting system. The proposed change would not affect outlays or benefits. It would be desirable for all of the smaller pension programs to be converted to an accrual basis. As indicated earlier in this section, this year the Office and Management and Budget will be studying the feasibility of doing so.

Health Care for Retirees

Federal civilian retirees can continue to enroll in the health insurance programs to which current employees belong, while military retirees can continue to use military medical facilities. Although agencies are charged the full accrual value of new employees' retirement annuities, the costs for Federal retirees' health care are not charged to agencies as they accrue. Thus, agencies are charged less than the full cost of employee pay and benefits, and consequently they have an incentive to use more personnel in their allocation of budget resources than is fully optimal. Although this accounting practice has also been standard in the private sector, new accounting rules announced by the Financial Accounting Standards Board (FASB) will require firms to record these accruing liabilities against current income.

Most Federal civilian retirees purchase health insurance through the Federal Employees Health Benefits Program (FEHBP). The Government and insured retirees each pay part of the premiums. An appropriation to the Office of Personnel Management pays the Government premium share for retirees. The Postal Service makes a contribution toward the cost of its retirees' current and past premiums. Other agencies make no payment for the cost of their retirees' health coverage.

Rising health care costs and an increasing number of Federal annuitants have caused expenditures for retiree health benefits to increase over time. Estimated outlays for Federal annuitants' health benefits in 1992 are $3.6 billion.

A rough estimate of the present value of civilian retiree health benefits based on service to date is approximately $100 billion to $130 billion. On a closed-system basis, which includes benefits attributable to future service, the present value of retiree health benefits is estimated to be approximately $125 billion to $185 billion. These estimates are only crude approximations, based on the method in the proposed FASB requirements for disclosure of post-retirement health care liabilities for private business. These upper range and lower range estimates reflect a difference of two percentage points in the assumed trend in health care expenditures. Since there is no funding for this program, an actuarial deficiency exists equal to the present value of benefits.

Military retirees are entitled to essentially free health care in military medical facilities if the facility has the capability to provide the needed care. Until they reach the age of 65, military retirees are also entitled to health care financed by the Civilian Health and Medical Program of the Uniformed Services (CHAMPUS). No premium is charged for CHAMPUS financed care, but there are deductibles and a 25 percent co-payment requirement. After they reach 65 years of age, military retirees are entitled to care financed by medicare.

Department of Defense costs for retiree health care consist of the costs of building, equipping, staffing, operating and maintaining the military medical treatment facilities and the costs of claims paid by CHAMPUS and the administration of CHAMPUS. The costs of the military health care program, including health services provided to retirees, are funded annually by direct appropriations in the year the services are rendered (or, in the case of CHAMPUS, billed). The accruing costs for future health care due current employees when they retire is not now being recorded in the budget.

In order to provide a better focus on military retiree health care costs, the Defense Department is studying a proposal to fund the costs of health care provided to retirees, including the costs of CHAMPUS, on an actuarial basis. This change would help make the total costs of current force sizing decisions explicit when those decisions are made. At present, the Defense Department does not have the capability to determine the actual cost of providing health care in military medical facilities to retirees. Broad average cost estimates are used to estimate the cost of care provided to retirees.

The proposal currently under review would deposit the costs of health care for future military retirees, estimated on an actuarial basis, into a trust fund from which actual in-house and CHAMPUS costs of those retirees would be paid. This is similar to the current method of budgeting for military retired pay. There would be a period of approximately 40 to 65 years before health care costs for current retirees are no longer included in the budget authority requests of the Department of Defense.

Day-to-day management of medical costs would not be affected by the change being studied, nor would total budget outlays in any year be affected. What would change is the inclusion of cost in the program's budget when the decision to incur the cost is actually made, rather than years later.

VIII.C. ACCOUNTING FOR FEDERAL BORROWING AND DEBT

Debt is the most explicit and legally binding obligation of the Federal Government. At the end of 1990 the Government owed $2,410 billion of principal to the people who had loaned it the money to pay for past deficits. The gross Federal debt, including the amount held by trust funds and other Government accounts, was $3,206 billion. This year the Government is estimated to pay about $216 billion of interest to the public on its debt. The total interest on gross Federal debt is about $286 billion, including $70 billion paid to trust funds.

The present deficit is continuing to increase the amount of debt. However, the spending reductions and tax increases in the Omnibus Budget Reconciliation Act of 1990, when combined with the present budget proposals, should make it possible to restore the consolidated Federal budget to balance by 1996. The reduction in the deficit and borrowing will be accelerated as soon as the economy recovers from its current slowdown and the Government ceases to incur large outlays to fund the costs of resolving insolvent thrift institutions and banks.

TRENDS IN FEDERAL DEBT

Federal debt held by the public has more than tripled since 1980, as shown in table C–1. Its growth was particularly rapid through 1986, increasing at an annual rate of 16 percent. The rate of increase was nearly cut in half from 1986 to 1990, and a further sharp deceleration is projected after 1992.

At the end of World War II, Federal debt equalled more than 100 percent of GNP. From then until the 1970s, Federal debt grew gradually, but, due to inflation, it declined significantly in real terms. Because of an expanding economy as well as the inflation, Federal debt decreased almost every year as a percentage of GNP. With households borrowing heavily to buy homes and consumer durables, and with businesses borrowing heavily to buy plant and equipment, Federal debt also decreased almost every year as a percentage of total credit market debt.

During the 1970s, large budget deficits emerged as the economy was disrupted by oil shocks and recessions. The nominal value of Federal debt more than doubled, and, despite high inflation, the real value of Federal debt increased by about a fifth. The ratios of debt to GNP and to total credit market debt stopped declining by the middle of the decade.

The growth of Federal debt held by the public accelerated during the 1980s. Budget deficits were high. With inflation successfully reduced, the large growth in nominal debt meant a large growth in real debt as well. The ratio of Federal debt to GNP rose from 27 percent in 1980 to 43 percent in 1987 and then leveled off through 1989. This was still well below its ratio from World War II to the beginning of the 1960s. The ratio of Federal debt to total credit market debt also increased up to 1986, though to a lesser extent, before leveling off.

The Federal deficit increased in 1990 for reasons that are largely transitory. Sizeable outlays were needed to fund the costs of resolving insolvent thrift institutions and banks, partly in order to acquire assets that will be sold in later years. The economic slowdown automatically decreased the growth of receipts by reducing incomes below what they otherwise would have been. Federal borrowing is estimated to increase still more in 1991, due to the downturn in the economy and additional outlays to resolve thrift institutions and banks, and to be nearly as high in 1992 despite a resumption of strong economic growth.

By 1993, however, the need for further new disbursements to resolve insolvent thrift institutions and banks should be substantially diminished; and the proceeds from selling assets acquired in previous years should rise. At the same time, the deficit should be improved by the continuing effects of economic expansion and of the spending constraints and other policies put in place by the Omnibus Budget Rec-

Table C–1. TRENDS IN FEDERAL DEBT HELD BY THE PUBLIC
(Dollar amounts in billions)

	Debt held by the public		Debt held by the public as a percent of:		Interest on debt held by the public as a percent of total outlays[3]

1995 estimate	3,267.3	2,051.1	44.5	....	15.8
1996 estimate	3,250.7	1,973.4	41.6	....	14.6

[1] Debt in current dollars deflated by the GNP deflator for the fiscal year with FY 1982 = 100.

[2] Source: Federal Reserve Board flow-of-funds accounts. Total credit market debt owed by domestic nonfinancial sectors, modified to be consistent with budget concepts for the measurement of Federal debt. Projections not available.

[3] Interest on debt held by the public is estimated as the interest on the public debt less the "interest received by trust funds" (subfunction 901 less subfunctions 902 and 903). It does not include the comparatively small amount of interest on agency debt or the offsets for other interest received by Government accounts.

onciliation Act of 1990. By 1996, the Government is estimated to have a small surplus on a consolidated basis. The effect of cyclical forces and deposit insurance on the pattern of deficit reduction is analyzed further in Chapter III, "Economic Assumptions and Sensitivities."

Federal borrowing is therefore estimated to decrease considerably beginning in 1993 and to turn into a small repayment of debt in 1996. Debt held by the public is estimated to decline from 50 percent of GNP in 1992 and 1993 to 42 percent in 1996. Interest on the debt held by the public is estimated to be a smaller drain on the budget, accounting for 14.6 percent of total outlays by 1996.

The net effect of Federal borrowing on the economy depends partly on how the Government uses the borrowed funds. The outlays to resolve insolvent thrift institutions and banks are mostly paid to other financial institutions, which largely use these funds to make loans and buy securities. The Federal demand for funds from the credit market to finance these outlays is thus offset by an equal supply of funds to the credit market. Because of the offsetting transactions, there is no upward pressure on the average level of interest rates, and the Federal borrowing does not reduce private investment. In other words, Federal borrowing for this purpose does not divert national saving from other, potentially more productive uses. Federal borrowing or taxation to pay interest on this debt, however, does have the normal effects of borrowing or taxation.

Federal borrowing could also be used to some extent to finance additional investment with a high rate of return, either tangible or intangible. If that occurred, the combination of more debt and more capital would be productive. It is impossible to attribute specific outlays to the borrowing except in special cases. The funds from borrowing and general tax receipts are mixed together. However, the data do not reveal that any upsurge in Federal investment has accompanied the upsurge in Federal borrowing. Investment rose in absolute terms but was about the same proportion of total Federal outlays at the beginning of the 1990s as at the beginning of the 1980s; and investment outlays, while significant, were a modest proportion of total outlays.

Thus the above-normal growth in Federal debt does not seem to have financed additional capital investment beyond what might have been expected. This has led to some concern that the future output and living standards of the Nation may be reduced. Although there is reason for this concern, much of the present rise in borrowing is transitory, caused by the automatic effects of the economic slowdown and the costs of resolving insolvent thrift institutions and banks. Sound policies based on the Omnibus Budget Reconciliation Act of 1990 can eliminate the consolidated deficit by 1996 and ultimately balance the budget exclusive of social security. This will reduce the drain of Federal borrowing on national saving and enhance productivity, which, in turn, will make manageable the future interest on the Federal debt and the burden of social security expenditures in the next century.

DEBT HELD BY THE PUBLIC AND GROSS FEDERAL DEBT

The Federal Government issues debt for two principal purposes. First, as discussed in the previous section, it borrows from the public in order to finance the Federal deficit. Second, it issues debt to Government accounts, primarily trust funds, that accumulate surpluses. By law, most trust fund surpluses must be invested in Federal securities. The gross Federal debt is thus defined to consist of both the debt held by the public and the debt held by Government accounts. Nearly all the Federal debt has been issued by the Treasury and is formally called "public debt," but a small portion has been issued by other Government agencies and is called "agency debt."[1]

Borrowing from the public, whether by the Treasury or some other Federal agency, has a significant impact on the economy. Borrowing from the public is normally a good approximation to Federal dissaving, although, as discussed above, that is not the case when the borrowing is used to fund the cost of resolving insolvent thrift institutions and banks. Federal dissaving, even if used productively for additional investment, has to be financed by the saving of households and businesses, the State and local sector, or the rest of the world.[2] Borrowing from the public affects the volume of securities sold in the credit market, the size and composition of assets held by the private sector, and the perceived wealth of the public. And it affects the amount of taxes required to pay interest outlays to the public. Borrowing from the public is therefore an important concern of Federal fiscal policy.

Issuing debt securities to Government accounts is an essential element in accounting for the operation of these funds. The balances of debt represent the cumulative surpluses of these funds due to the excess of their tax receipts and other collections compared to their spending. These balances can be used in later years to finance future payments to the public. The interest on this debt compensates these funds—and the members of the public who pay earmarked taxes or user fees into these funds—for spending some of their income at a later time than when they receive it. Public policy may deliberately run surpluses and accumulate debt in trust funds and other Government accounts in order to finance future spending or to measure the accruing cost of employee retirement plans, as it is doing now with social security and certain other funds.

---

[1] The term "agency debt" is defined more narrowly in the budget than in the securities market, where it includes not only the debt of the Federal agencies listed in table C–3 but also the debt of the Government-sponsored enterprises listed in table A–14 of Chapter VIII.A and certain Government-guaranteed securities.

[2] The Federal sector of the national income and product accounts provides a better measure of the deficit for analyzing Federal dissaving than does the budget deficit or Federal borrowing from the public. The Federal sector and its differences from the budget are discussed in Chapter XVI. Federal expenditures for tangible and intangible capital are not counted as saving in the national income and product accounts and hence in this discussion.

However, the issuance of debt to Government accounts does not have any of the economic effects of borrowing from the public. It is an internal transaction between two accounts, both within the Government itself. It does not represent either current transactions of the Government with the public or an estimated amount of future transactions with the public. If the account conducts a retirement program, it does not represent the actuarial liability or an unfunded actuarial liability. (The future transactions of the major Federal retirement programs, which own about four-fifths of the debt held by Government accounts, are important in their own right and are discussed in Chapter VIII.B, "Identifying Long-Term Retirement Obligations.") Debt held by the public is therefore a better concept than gross Federal debt for analyzing the effect of the budget on the economy.

Table C–2 summarizes Federal borrowing and debt from 1990 through 1996. This table is supplemented for earlier years by the data in Part Seven, "Historical Tables," tables 7.1–7.3. In 1990 the borrowing from the public was $220.1 billion, and Federal debt held by the public increased to $2,410.4 billion. The issuance of debt to Government accounts was $118.7 billion, and gross Federal debt increased to $3,206.3 billion. Borrowing is estimated to increase to $307.2 billion in 1991, decline moderately to $277.8 billion in 1992, and then decline rapidly and turn into a $16.7 billion repayment of debt in 1996.

Borrowing from the public depends both on economic conditions and on the Federal Government's expenditure programs and tax laws. The sensitivity of the budget to economic conditions is analyzed in Chapter III.

MEASUREMENT OF BORROWING AND DEBT

Debt held by the public was formerly measured as the par value (or face value) of the security, which is the principal amount due at maturity. The only exception was savings bonds. However, most Treasury securities are sold at a discount from par, and some are sold at a premium. If Treasury sells a bill with a $10,000 par value at a price of $9,300, it raises $9,300 of cash and finances $9,300 of the deficit. For both economic and budgetary analysis, it is more meaningful to say that the Government has borrowed $9,300 than to say it has borrowed $10,000.

The budget recently adopted the accrual method of measuring almost all Treasury debt held by the public.[3] At the time of sale, the accrual value equals the sales price. Subsequently, the accrual value equals the sales price plus the amount of the discount that has been amortized up to that time. In equivalent terms, the accrual value equals the par value less the unamortized discount. (For a security sold at a premium, the definition of accrual value is symmetrical.) Data were revised back to 1956. Agency debt, with one minor exception, continues to be recorded at par. (Treasury reports debt held by the public at both par and accrual values.)

Debt held by Government accounts consists almost entirely of "special issues" of Treasury debt, which are reported only at par. As a result, only a small part of debt held by Government accounts is recorded in the budget at accrual value. Gross Federal debt—the sum of debt held by the public and debt held by Government accounts—is therefore reported in the budget largely on an accrual basis but partly at par. For the same reason, total Treasury debt, which includes almost all Federal debt, is also reported in the budget largely on an accrual basis but partly at par. (Treasury reports its corresponding series only at par.)

BORROWING AND GOVERNMENT DEFICITS

Debt Held by the Public.—Table C–2 shows the relationship between borrowing from the public and the Federal deficit. The total deficit of the Federal Government includes not only the budget deficit but also the surplus or deficit of the off-budget Federal entities, which have been excluded from the budget by law. Under present law the off-budget Federal entities are the old-age and survivors insurance trust fund, the disability insur-

[1] Besides checks outstanding, includes accrued interest payable on Treasury debt, miscellaneous liability accounts, allocations of special drawing rights, and, as an offset, cash and monetary assets other than the Treasury operating cash balance, miscellaneous asset accounts, and profit on sale of gold.

[2] The Farm Credit System Financial Assistance Corporation is estimated to be reclassified from a Government-sponsored enterprise to a Federal agency as of October 1, 1992, and its debt is accordingly reclassified as Federal agency debt.

[3] Consists primarily of Federal Financing Bank debt.

[4] The statutory debt limit is $4,145 billion.

ance trust fund, and the Postal Service fund. Since they had a large combined surplus in 1990 and are estimated to have a growing surplus during 1991–96, they reduce the requirement for Treasury to borrow from the public by a substantial amount.

The total Federal deficit is financed either by borrowing from the public or by several other means, shown in table C–2, such as a decrease in Treasury's cash balance. These other means of financing are normally small relative to borrowing from the public. This is because they are limited by their own nature. Decreases in cash balances, for example, are inherently limited by past accumulations, which themselves required financing when they were built up. In 1990 these other accounts contributed $0.3 billion toward financing the deficit. In 1991 the estimated borrowing is $10.9 billion less than the total deficit, primarily because the $40.1 billion cash balance at the end of 1990 was $10.1 billion more than the $30 billion estimated for the end of both that year and 1991.

A new type of means of financing has been created by the Federal Credit Reform Act of 1990. Credit reform will change the method of budgeting for Federal credit programs starting in 1992. As explained in Chapter VIII.A, "Recognizing and Reducing Federal Underwriting Risks," the budget will record the subsidy cost of new direct loans and loan guarantees instead of the annual cash flows. The portion of the cash flows that does not represent a subsidy cost will be non-budgetary, recorded as a means of financing.

The nature of the financing transactions will differ between loan guarantees and direct loans. For loan guarantees, the program account in the budget will pay the subsidy cost of new loan guarantees to a non-budgetary guaranteed loan financing account. This account will hold the subsidy, collect fees, and pay default claims. It will accumulate balances to the extent that its collection of subsidies, fees, and interest exceeds its payments. These balances will be deposited with Treasury in interest-earning, uninvested funds, which are not part of the Federal debt.

When the guaranteed loan financing account collects a subsidy payment or an interest payment from the budget, the increase in its balances will exactly offset the increase in outlays and the budget deficit. No additional borrowing from the public will be needed to finance the additional deficit; the increase in the balances will itself be the means of financing the increase in the deficit. When the guaranteed loan financing account collects fees from the public, this will increase its balances and provide cash to the Government that will be used to pay the Government's bills just like tax receipts, borrowing, or any other cash collections. And when the account pays default claims to the public, the decrease in its balances will require financing just like any other cash disbursement. An increase in the balances of the guaranteed loan financing accounts will therefore be a means of financing the Federal deficit.

For direct loans, the program account in the budget will likewise pay the subsidy cost of new direct loans to a non-budgetary direct loan financing account. This account will borrow the non-subsidy portion of the direct loan from Treasury and disburse the entire loan to the public. It will subsequently collect interest and repayments of principal from the public, pay interest to Treasury on its balances of debt, and repay its debt to Treasury.

When the direct loan financing account makes a direct loan, the subsidy and non-subsidy portions of the loan disbursement will both require financing. The subsidy portion is a budget outlay and causes in increase in the deficit; the non-subsidy portion is represented by the increase in the balances of debt that the account owes to Treasury. Thus, an increase in the account's balances of debt due to making a direct loan corresponds to a requirement for additional Government financing. A decrease in the account's balances of debt due to the repayment of a loan—and a corresponding repayment of its debt to Treasury—will provide cash to the Treasury that will be used to pay the Government's bills just like any other cash collections. A decrease in the balances of the direct loan financing accounts will therefore be a means of financing the Federal deficit.

An increase in the balances of the guaranteed loan financing accounts and the direct loan financing accounts will thus be means of financing the Federal Government, but they will have opposite effects. As shown in table C–2, the guaranteed and direct loan financing accounts are estimated to have essentially equal and offsetting effects on the means of financing in 1992. In the following years the direct loan financing accounts are estimated to increase financing requirements by more than the amount that is financed by the guaranteed loan financing accounts. By 1996, the net effect is estimated to add $3.7 billion to the financing requirements.

Debt Held by Government Accounts.—The amount of Federal debt issued to Government accounts depends largely on the surpluses of the trust funds, both on-budget and off-budget, which owned 95 percent of the total Federal debt held by Government accounts at the end of 1990. In 1990, for example, the total trust fund surplus was $120.3 billion and Government accounts invested $118.7 billion in Federal securities. The small difference is because some other accounts hold Federal debt and because the trust funds may change the amount of their cash assets not currently invested.

AGENCY DEBT

Several Federal agencies, shown in table C–3, sell debt securities to the public and in a few cases to other Government accounts. The reason for issuing agency debt differs considerably from one agency to another. At the end of 1990, agency debt was only one percent of Federal debt held by the public. During 1990, agency borrowing was $7.3 billion.

The predominant agency borrowers from the mid-1980s to 1989 were the Federal Savings and Loan Insurance Coporation (FSLIC) and the Federal Deposit Insurance Corporation (FDIC) permanent insurance fund. (FSLIC's li-

*$500 thousand or less.

abilities were subsequently transferred to the FSLIC Resolution Fund, and the FDIC permanent insurance fund was renamed the Bank Insurance Fund, or BIF.) They issued notes to help resolve the financial problems of certain failing thrifts and banks, primarily by providing notes to prospective purchasers as parts of agreements for them to buy the failing institutions. Issuing notes to pay the Government's bills is equivalent to borrowing from the public and then paying the bills by disbursing the cash borrowed, so it was recorded as being simultaneously an outlay and a borrowing.[4] The notes were therefore classified as agency debt.

During 1990, both FSLIC and BIF notes outstanding declined by small amounts. In 1991, however, $11.5 billion of FSLIC notes are estimated to be repaid, reducing the amount outstanding by over half. BIF, on the other hand, is estimated to issue $0.9 billion more of notes in 1991. Both agencies are estimated to repay small amounts in 1992 and later years. These notes are estimated to be half of all agency debt at the end of 1992.

A number of FSLIC's assistance agreements during 1988–89 specified that the final determination of the amount of notes given to the purchaser was not to be made until the assets and liabilities of the failed thrift had been fully valued. This was done in 1990. However, the valuation depended on conditions as of the day of the contract, the Government's legal obligation was determined as of that day, and the adjustment to the notes was retroactive to that day. Outlays and borrowing are therefore recorded retroactively as of the day of the contract in 1988 or 1989. This increases FSLIC outlays and borrowing by $7 million in 1988 and $1,365 million in 1989 over the amounts previously published.

The budget last year showed that a certain new type of lease-purchase contract was equivalent to direct Federal construction financed by Federal borrowing. The Federal Government guaranteed the debt used to finance the construction of buildings for the National Archives and Architect of the Capitol and is exercising full control over the design, construction, and operation of the buildings. The construction and interest expenditures were therefore classified as Federal outlays, and the borrowing, which took place in 1989, was classified as Federal agency borrowing from the public. The securities used to finance the construction of the building for the Architect of the Capitol were zero-coupon certificates, for which the sales price was about one-fourth of par value. As an exception to the normal treatment of agency debt, they are recorded in the budget at accrual value and the interest is accrued as an outlay.[5]

The proper budgetary treatment of lease-purchases has been further examined during the past year. It has been determined that outlays for a lease-purchase in which the Government assumes substantial risk will be recorded in an amount equal to the asset cost over the period during which the contractor constructs, manufactures, or purchases the asset; if the asset already exists, the outlays will be recorded when the contract is signed. Agency borrowing will be recorded each year to the extent of these outlays. The agency debt will subsequently be redeemed over the lease payment period by a portion of the annual lease payments. This rule is effective starting in 1991. However, no authorizations for lease-purchase agreements in which the Government assumes substantial risk are estimated for 1991 or 1992.

Besides the lease-purchases financed in these ways by agency borrowing from the public, the budget also reflects the cost of lease-purchases financed by the Federal Financing Bank (FFB). The FFB, established within the Treasury Department in 1974, can lend to agencies by purchasing agency debt or in other specified ways. It finances these transactions by borrowing from the Treasury, which in turn borrows from the public. This reduces the cost of financing below what the agency or guaranteed private borrower would have had to pay in the credit market. In 1988, 1989, and 1990 Congress authorized the General Services Administration to enter into lease-purchase contracts for a number of buildings to be constructed over five years at a total cost of $1.9

---

[4] The FHA and Interior debt securities are also issued as a means of paying specified bills. The budgetary treatment of these securities is further discussed in Special Analysis E of the 1989 budget, pp. E–25 to E–26; and Special Analysis E of the 1988 budget, pp. E–27 to E–28.

[5] Table C–3 reflects corrections to the calculation of accrual value.

billion. The FFB is financing these contracts. The outlays will be recorded in the budget as payments are made for construction and other costs, and the financing will consist of Treasury borrowing from the public.

Because the FFB reduced the cost of agency borrowing below what the agency would have had to pay in the market, agencies for many years after the FFB was established normally borrowed almost nothing from the public. The one large exception was when borrowing was inherent in the operation of an agency program, as it was for the issuance of FSLIC and FDIC notes and a few other securities. FFB purchases of agency debt were not included in tabulations of Federal debt, in order to avoid double counting. Therefore, until FSLIC and FDIC began to issue large amounts of notes, agency debt usually declined every year.

However, because of the decline of interest rates in recent years, the interest rate on outstanding debt is often higher than the rate on new borrowings. The Tennessee Valley Authority decided to repay some of the high-interest debt that it owed FFB when that debt became callable and to finance that repayment by new borrowing from the public. In order to lock-in the prevailing interest rates, TVA borrowed $8.0 billion from the public in late calendar year 1989 and placed most of the proceeds in a defeasance trust. The defeasance trust, in turn, began using these balances to pay off debt to the FFB during 1990 and is estimated to complete its operations in 1994. In the meantime, the defeasance trust is invested in Treasury securities, as shown in Table C–4, where it is classified as part of TVA.

The sale of TVA bonds combined with the purchase of Treasury securities has no net effect on the amount of Federal debt held by the public. When the defeasance trust sells its Treasury securities in order to pay off TVA debt to the FFB, the FFB and Treasury use the proceeds to retire Treasury securities. Again, there is no effect on the amount of Federal debt held by the public. Only the composition of debt held by the public is changed, as TVA bonds replace Treasury securities. Gross Federal debt does rise temporarily until the defeasance trust uses up its balances.

DEBT HELD BY GOVERNMENT ACCOUNTS

Trust funds, and some public enterprise revolving funds and special funds, accumulate cash in excess of current requirements in order to meet future obligations. These cash surpluses are invested mostly in Treasury debt and, to a very small extent, in agency debt.

Investment by trust funds and other Government accounts was around $10 billion per year in the early 1980s. Primarily due to the Social Security Amendments of 1983, an expanding economy, and the creation of the military retirement trust fund, investment has risen greatly since then. It was $118.7 billion in 1990 and, as shown in table C–4, it is estimated to be $125.5 billion in 1992.

The extraordinary rise of investment by Government accounts is concentrated among a few trust funds. The two social security trust funds—old-age and survivors insurance (OASI) and disability insurance (DI)—have large surpluses and invest increasing amounts almost each year: a total of $178.1 billion during 1990–92, which constitutes 51 percent of the total estimated investment by Government accounts. The hospital insurance trust fund (HI), also financed by the social security payroll tax, has large surpluses at present and accounts for 15 percent of the total investment over this period.

In addition to these three funds, the largest investors in Federal securities are the two major Federal employee retirement funds: the civil service retirement and disability trust fund and the military retirement trust fund. They account for 31 percent of the total investment by Government accounts during 1990–92. Altogether, these two retirement funds and the three funds financed by the social security tax account for 97 percent of the estimated investment by all Government accounts during this period.

The holdings of Federal securities by Government accounts are estimated to rise to $1,025.7 billion at the end of 1992. This will be 26 percent of the gross Federal debt. The five major trust funds discussed above will account for 82 percent of the total holdings by Government accounts.

[2] The investments of the HI and SMI catastrophic trust funds were transferred to the SMI trust fund in 1990. A further transfer is estimated from the SMI trust fund to the HI trust fund in 1992.

[3] Only those deposit funds classified as Government accounts.

LIMITATIONS ON FEDERAL DEBT

Definition of Debt Subject to Limit.— Statutory limitations have normally been placed on Federal debt. Until World War I, the Congress ordinarily authorized a specific amount of debt for each separate issue. Beginning with the Second Liberty Bond Act of 1917, however, the nature of the limitation was modified in several steps until it developed into a ceiling on the total amount of most Federal debt outstanding. The latter type of limitation has been in effect since 1941. The limit currently applies to most debt issued by the Treasury since September 1917, whether held by the public or by Government accounts; and other debt issued by Federal agencies that, according to explicit statute, is guaranteed as to principal and interest by the United States Government.

Table C–2 compares total Treasury debt with the amount not subject to limit. Most of the Treasury debt not subject to limit was issued by the FFB. It is authorized to have outstanding up to $15 billion of publicly issued debt, but it normally borrows from the Treasury because Treasury can borrow more cheaply from the public. A few years ago, however, the debt limit constraint led Treasury to issue FFB securities to the civil service retirement and disability trust fund in place of otherwise identical Treasury securities that were subject to the debt limit. This enabled Treasury to raise needed cash by selling securities to the public that were subject to the limit. Since 1986 the civil service retirement fund has normally held $15.0 billion of FFB securities, and the budget assumes that the FFB securities outstanding at the end of the fiscal year will be kept at the amount authorized by law. The remaining Treasury debt not subject to limit consists almost entirely of silver certificates and other currencies no longer being issued.

The sole type of agency debt now subject to the general limit is the debentures issued by the Federal Housing Administration, which were only $357 million at the end of 1990. Some of the other agency debt, however, is subject to its own statutory limit. For example, until 1991 the Postal Service was limited to $10 billion of securities outstanding and $2 billion of annual borrowing. Under revised legislation, its limit on debt outstanding is rising in two steps to $15 billion in 1992, and its limit on annual borrowing has increased to $3 billion. Besides Treasury debt and agency debt, the debt subject to limit also includes a few very small adjustments.

The amount of debt subject to limit was formerly defined by law as the par value of the securities (except for savings bonds, which were measured at redemption value). This was modified by law in August 1989 in a way that currently applies to Treasury bills and zero-coupon bonds. These securities do not pay any cash interest. They are sold at a discount and pay their entire interest through the periodic amortization of the discount over the term of the security. For Treasury bills, with a maturity of one year or less, the difference between par value and sales price is large enough to be significant. For zero-coupon bonds with a 30-year maturity, the par value could be around ten times the sales price. Measuring zero-coupon bonds at par reduced Treasury's flexibility in debt management, because these securities increased the debt subject to limit by a large multiple of the cash raised to finance the deficit. Furthermore, measuring these securities at par produced a significant difference between the recorded debt and the accrual value, which, as previously explained, is more meaningful for economic and budgetary analysis.

The change in law provided that Treasury securities issued on a discount basis are to be measured at accrual value for calculating the debt subject to limit. The new method is not applied to regular notes and bonds or to "special issues," which are issued almost exclusively to Government accounts and comprise most of the debt that is held by Government accounts. These securities are still recorded at par for calculating the debt subject to limit. However, bills and zero-coupon bonds account for most of the unamortized discount (less premium) on Treasury securities other than "special issues": $56.9 billion out of $59.8 billion at the end of 1990.

An adjustment for measurement differences is thus needed in order to derive debt subject to limit from Treasury debt and agency debt. The budget records all Treasury debt except "special issues" at accrual value; the debt subject to limit records Treasury bills, zero-coupon bonds, and savings bonds at accrual value but regular notes and bonds and "special issues" at par value. The unamortized discount (less premium) on regular notes and bonds is thus part of debt subject to limit but is not part of Treasury debt (as recorded in the budget). Therefore, as in table C–2, the unamortized discount on regular notes and bonds must be added to Treasury debt in order to derive debt subject to limit. (The tables published by the Treasury Department derive the debt subject to limit from a different base than table C–2 but have a similar adjustment.)

Methods of Changing the Debt Limit.—The statutory debt limit has frequently been changed. During the 1960s Congress passed 13 separate acts to raise the limit or to extend the duration of a temporary increase, and during the 1970s Congress passed 18 such acts. During the 1980s Congress passed 24 such acts, two to four every year except 1988. In 1990 Congress passed seven such acts, the most ever enacted in a single year.

The statutory limit can be changed by normal legislative procedures. It can also be changed as a consequence of the annual Congressional budget resolution, which is not itself a law. The budget resolution includes a provision specifying the appropriate level of the debt subject to limit at the end of each fiscal year. The rules of the House of Representatives provide that, when the budget resolution is adopted by both Houses of the Congress, the vote in the House of Representatives is deemed to have been a vote in favor of a joint resolution setting the statutory limit at the level specified in the budget resolution. The joint resolution is transmitted to the Senate for further action. It may be amended in the Senate to change the debt limit provision or in any other way. If it passes both Houses of the Congress, it is sent to the President for his signature. This method directly relates the decision on the debt limit to the decisions on the Federal deficit and other factors that determine the change in the debt subject to limit. Both methods have been used numerous times.

Recent Changes in the Debt Limit.—The statutory debt limit was raised to $3,122.7 billion on November 8, 1989. As the amount of debt approached the limit in the summer of 1990, consideration of the debt limit became part of the overall budget negotiations between the President and the Congress. On August 9, 1990, the limit was temporarily raised to $3,195 billion through October 2. As the negotiations continued, this temporary increase was extended for a few days at a time in four subsequent acts and was raised to $3,230 billion from October 28 through November 5. The latter four of these temporary increases were as one provision of a continuing resolution, which provided appropriations to continue to operate the Government for the same temporary time. The budget negotiations were concluded with the Omnibus Budget Reconciliation Act of 1990, which the President signed on November 5, 1990. This increased the debt limit to $4,145 billion, which is currently estimated to be sufficient until sometime during 1993.

Unlike some previous years when the debt limit was under consideration, the debt limit in 1990 never temporarily dropped below the actual level of debt on a business day. Treasury was always able to fully invest the trust funds and never had to suspend the sales of savings bonds, State and local government series issues, or other securities. However, the debt was virtually at the limit for a number of days, and Treasury postponed several auctions because of uncertainty about congressional action.

Federal Funds Financing and the Change in Debt Subject to Limit.—The change in debt held by the public, as shown in table C–2, is determined principally by the total Government deficit. The debt subject to limit, however, includes not only debt held by the public but also debt held by Government accounts. The change in debt subject to limit is therefore determined both by the factors that determine the total Government deficit and by the factors that determine the change in debt held by Government accounts.

The budget is composed of two groups of funds, Federal funds and trust funds. The Federal funds, in the main, are derived from tax receipts and borrowing and are used for the general purposes of the Government. The trust funds, on the other hand, are financed by taxes or other collections earmarked by law for speci-

ADDENDUM							
Debt subject to statutory limit[5]	3,161.2	3,583.3	3,986.4	4,327.9	4,548.5	4,736.4	4,912.8

*$50 million or less.

[1] Besides checks outstanding, includes accrued interest payable on Treasury debt, miscellaneous liability accounts, allocations of special drawing rights, and, as an offset, cash and monetary assets other than the Treasury operating cash balance, miscellaneous asset accounts, and profit on sale of gold.

[2] Does not include investment in Federal debt securities by deposit funds classified as part of the public.

[3] Only those deposit funds classified as Government accounts.

[4] The Farm Credit System Financial Assistance Corporation is estimated to be reclassified from a Government-sponsored enterprise to a Federal agency as of October 1, 1992, and its debt is accordingly reclassified as Fe deral agency debt.

[5] The statutory debt limit is $4,145 billion.

fied purposes, such as paying social security or unemployment benefits.

A Federal funds deficit must generally be financed by borrowing, either by selling securities to the public or by issuing securities to Government accounts. Federal funds borrowing consists almost entirely of the Treasury issuing securities that are subject to the statutory debt limit. Trust fund surpluses are almost entirely invested in these securities, and trust fund holdings include most of the debt held by Government accounts. The change in debt subject to limit is therefore determined principally by the Federal funds deficit, which is equal to the arithmetic sum of the total Government deficit and the trust fund surplus.

Table C–5 derives the change in debt subject to limit. In 1990 the Federal funds deficit was

$340.7 billion, and other factors reduced the change in debt subject to limit by $9.2 billion. The largest other factor was the sale of agency debt not subject to limit. As a result, the debt subject to limit increased by $331.5 billion, which was $111.3 billion more than the increase in debt held by the public.

As long as the trust fund surplus is large, the Federal funds deficit will be much more than the total Government deficit; and the increase in debt subject to limit will be much more than the increase in debt held by the public. The trust fund surplus is estimated to increase substantially above its present level in the future, so the debt limit will have to be increased by much more than the total Government deficit. In 1996, for example, the Government is estimated to repay $16.7 billion of debt held by the public. Nevertheless, the debt subject to limit is estimated to increase by $176.4 billion—a difference of $193.0 billion.

DEBT HELD BY FOREIGN RESIDENTS

During most of American history the Federal debt was held almost entirely by individuals and institutions within the United States. In the late 1960s, as shown in table C–6, foreign holdings were just over $10.0 billion, less than 5 percent of the total Federal debt held by the public.

Foreign holdings began to grow much faster starting in 1970. This increase has been primarily due to foreign decisions, both official and private, rather than the direct marketing of these securities to foreign residents. At the end of fiscal year 1990 foreign holdings of Treasury debt were $404.8 billion, which was 17 percent of the total debt held by the public. This proportion rose in most recent years but declined in 1990, when foreign holdings increased by only $9.9 billion. Although the amount of debt held by foreigners has grown greatly in the past ten years, the proportion is now a little lower than during the late 1970s. At the end of 1990, foreign central banks and other official institutions owned 67 percent of the Federal debt held by foreign residents; private investors owned nearly all the rest. All of the Federal debt held by foreign residents is currently denominated in dollars.

Foreign holdings of Federal debt are about one-fifth of the foreign-owned assets in the U.S., and foreign purchases of Federal debt securities are normally only a moderate part of the total capital inflow from abroad. The foreign purchases of Federal debt securities do not measure the full impact of the capital inflow from abroad on the market for Federal debt securities. The capital inflow supplies additional funds to the securities market generally, which affect the market for Federal debt. For example, the capital inflow includes deposits in U.S. financial intermediaries that themselves buy Federal debt.

FEDERALLY ASSISTED BORROWING

The effect of the Government on borrowing in the credit market arises not only from its own borrowing to finance Federal operations but also from its assistance to certain borrowing by the public. Federally assisted borrowing is of two principal types: Government-guaranteed borrowing, which is another term for guaranteed lending, and borrowing by Government-sponsored enterprises (GSEs). The Federal Government also exempts the interest on most State and local government debt from income tax.

Federal guarantees and GSEs are discussed in Chapter VIII.A, "Recognizing and Reducing Federal Underwriting Risks." Detailed data on guaranteed loans are presented in table A–13, and data on GSE borrowing and lending in table A–14. Table C–7 brings together the totals of Federal and federally assisted borrowing and lending and shows the trends since 1965 in terms of both dollar amounts and, more significantly, as percentages of total credit market borrowing. The lending is recorded at face value. It does not take into account the degree of subsidy and does not indicate the extent to which the credit assistance is likely to have changed the allocation of financial and real resources.

The Federal borrowing participation rate increased from an average of 17 percent in the 1960s to 27 percent in the 1970s and 42 percent in the 1980s. Since peaking at 56.6 percent in 1983, it was around 40 percent until 1990 despite the decline in Federal borrowing. The major factor keeping up the participation rate was the marked rise in GSE borrowing.

Table C–6. FOREIGN HOLDINGS OF FEDERAL DEBT

(In billions of dollars)

Fiscal year	Debt held by the public		Borrowing from the public		Interest on debt held by the public	
	Total	Foreign[1]	Total[2]	Foreign[1]	Total[3]	Foreign[4]

1988	2,050.3	345.9	162.1	66.4	172.2	28.6
1989	2,190.3	394.9	140.1	49.0	188.9	34.7
1990	2,410.4	404.8	220.1	9.9	202.4	37.4

[1] Estimated by Treasury Department. These estimates exclude agency debt, the holdings of which are believed to be small. For the most part they are measured at par value and therefore are not strictly comparable with the data on debt held by the public. However, the zero-coupon bonds sold to Mexico are measured on an accrual basis.

[2] Borrowing from the public is defined as equal to the change in debt held by the public from the beginning of the year to the end, except to the extent that the amount of debt is changed by reclassification.

[3] Estimated as interest on the public debt less "interest received by trust funds" (subfunction 901 less subfunctions 902 and 903). Does not include the comparatively small amount of interest on agency debt or the offsets for other interest received by Government accounts.

[4] Estimated by Bureau of Economic Analysis, Department of Commerce. These estimates include small amounts of interest from other sources, including the debt of Government-sponsored enterprises, which are not part of the Federal Government.

[5] Benchmark revisions reduced the estimated foreign holdings of Federal debt as of December 1978 and increased the estimated foreign holdings as of December 1984. As a result, the data on foreign holdings in different time periods are not strictly comparable, and the "borrowing" from foreign residents in 1979 and 1985 reflects the benchmark revision as well as transactions in Federal debt securities.

In 1990, however, the participation rate rose to 55.4 percent because of the increase in Federal borrowing. The Federal lending participation rate has been much more stable over time than the borrowing participation rate.

Table C–7. FEDERAL PARTICIPATION IN THE CREDIT MARKET

(Dollar amounts in billions)

[1] Total net funds borrowed (loaned) in credit market by domestic nonfinancial sectors, excluding equities. Financial sectors are omitted to avoid double counting, since financial intermediaries both borrow and lend in the credit market.

[2] Most Government-sponsored enterprises (GSEs) are financial intermediaries. GSE borrowing (lending) is nevertheless compared with total credit market borrowing (lending), because GSE borrowing (lending) is a proxy for the borrowing (lending) by nonfinancial sectors that is intermediated by GSEs. It assists the ultimate nonfinancial borrower (lender) whose loans are purchased or otherwise financed by the GSE. In order to avoid double counting, GSE borrowing and lending are calculated net of transactions with Federal agencies, transactions between GSEs, and transactions in guaranteed loans.

Source: Federal Reserve Board flow of funds accounts for total net borrowing and lending.

IX. MANAGING FOR INTEGRITY AND EFFICIENCY

IX. INTRODUCTION

This chapter describes five efforts the Administration is undertaking to improve Federal management.

(A) Strengthening Management and Accountability

(B) Improving Returns on Investment

(C) Reforming Regulation and Managing Risk-Reduction Sensibly

(D) Reforming the Budget Process

(E) Managing by Objectives

The Federal Government is an enormous enterprise. It spends 22 percent of the GNP, total economic activity larger than all countries except the United States itself, Japan, the Soviet Union and a newly united Germany. By virtue of its size, Government suffers, in many instances, from diseconomies of scale. Like other enterprises, it is, on occasion, incompetent. It has been taken advantage of, gamed, and even looted. It can also be extraordinarily effective, as was evidenced in preparations for Desert Shield and Desert Storm, and, on a more routine level, in most of the programs for which increases are being requested in the budget.

Unlike private enterprise, the Government's purpose is to provide for, assist, and regulate where the marketplace cannot or does not satisfactorily do so. It is rightly directed by the politics and policies of democratic institutions. These politics and policies can, however, pose barriers to good management.

The Government has no simply quantifiable objectives such as profits or market share against which to measure its success or failure. Its measures of success are difficult to arrive at. Since the matters it deals with are affected by much more than Federal actions, it is difficult to know the exact impact of Federal intervention. Yet, knowledge of these matters can be improved significantly. At the same time, the Federal Government's day-to-day management is impeded by unreliable information of its operations and financial condition. This should not be; it must be remedied.

Chapter IX.A. addresses progress to date, and the investments and future savings anticipated in 1992, relating to the strengthening of management and accountability. It describes the Administration's efforts to improve the machinery and integrity of Government—people and systems. Its focus is the delivery of Government programs and the improvement of confidence of Americans in governmental operations. Of particular note are the actions and investments in improving financial management and reducing risk in High Risk areas.

Chapter IX.B. addresses the improvement of Government returns on investment—improved outcomes of Federal policies and programs in relation to their costs. This section begins with the Administration's evaluation agenda, and then describes discretionary program terminations, decreases and increases presented in the budget. Its focus is informed choices within resource constraints.

Chapter IX.C. addresses the reform of Federal regulation and the more sensible management of risk-reduction in the areas of health and safety. Its focus is also informed choices within resource constraints. But it goes beyond Chapter IX.B. in that it discusses the non-Federal costs of Federal mandates, as well as the direct costs of Federal programs.

Chapter IX.D. discusses the reform of the budget process. It notes the progress achieved through the Budget Enforcement Act of 1990 and renews proposals for additional reforms to make the process work better and become more effective in reducing the deficit.

Finally, Chapter IX.E. reports on the Administration's progress in achieving the objectives selected by the President for management by objective.

IX.A. STRENGTHENING MANAGEMENT AND ACCOUNTABILITY

For too many years, the Nation has been justifiably outraged by revelations of Government mismanagement.

This section describes progress in:

- Improving Financial Management
- Addressing High Risk Areas
- Information Resources Management
- Procurement Reform
- Partnerships with the States
- Pay Reform

It also describes:

- Management Investments and Savings in the 1992 Budget

OVERVIEW

In October 1989, the Administration made a major commitment to identifying the areas of highest risk and vulnerability in Government operations. The current High Risk List totals 106 entries. In each of these areas, the Administration has developed and is implementing corrective action plans; and the risks in many of the areas have been, and are continuing to be, substantially reduced. The results of these efforts are summarized in this Chapter.

The corrective actions will take time. Long term strategies are needed. The High Risk approach ensures that the Administration publicly identifies the Government's most severe management problems and that these problems receive priority attention.

Financial management issues, which account for over one-third of the High Risk areas, clearly illustrate the need for long-term efforts. In the early 1980s, Federal cash flows were not under control, and there was no comprehensive Federal credit and debt collection policy. The Government had over 500 financial systems, many of them antiquated, incompatible, or redundant, and many not in compliance with applicable accounting standards.

Under the banner of Reform '88, the previous Administration made some progress in these areas. This progress has enabled the Bush Administration to start focusing on the quality, relevance, and timeliness of Federal financial data—to make it accurate and useful to policy and program officials, the Congress, and the public. The Administration's efforts in this area have been strongly reenforced by a series of cooperative efforts with Congress to produce needed legislation.

Good management begins with people. Recruiting and retaining a quality Federal workforce is central to ensuring responsive and effective public services. Passage of the Federal Employees Pay Comparability Act of 1990, and earlier enactment of increased senior-level pay, will over time, and for most functions, eliminate noncompetitive pay as a disincentive to Federal recruitment and retention. There remains, however, the need for more successful recruitment strategies and initiatives, more attention to the development of management skills, and more delegation of personnel management authority to line managers.

Good Federal management also requires good partnerships—with State and local governments and with private parties. Partnerships make sense. But they are hampered by the desire of too many at the Federal level to control all possible contingencies. Congress seeks to micro-manage. Auditors insist on endless procedural safeguards. Program officials overly design. Regulators require technologies as opposed to outcomes. Virtually everybody gets into the act. A balance must be found: based on trust and mutual respect, on analysis of the merits, and on accountability.

IMPROVING FINANCIAL MANAGEMENT

There has been progress. But much remains to be done to improve financial management.

OMB's Five Point Program.—Announced in May 1990, this Program has obtained results in each of five targeted areas.

- *Accounting Standards.*—Unlike the private sector and State and local government, the Federal Government has had no agreed means to establish and enforce accounting standards. Without such a mechanism, consistent Federal financial data reflecting the operations and condition of the Federal Government cannot be obtained. On October 10, 1990, the Secretary of the Treasury, the Director of OMB, and the Comptroller General signed a Memorandum of Understanding establishing a Federal Accounting Standards Advisory Board (FASAB). FASAB allows the Federal Government, for the first time, to develop comprehensive accounting standards through a public process. The Board began its work in January 1991.
- *Financial Information and Functional Standards.*—Consistent, Governmentwide financial reporting requires financial information standards for all data elements in Treasury and OMB financial reports. The Joint Financial Management Improvement Program (JFMIP)—whose principals are the Secretary of the Treasury, the Director of OMB, the Comptroller General, and the Director of the Office of Personnel Management—will issue these definitions by May 1991. Building on the Core Financial System Requirements established in January 1988, the JFMIP issued functional standards in May 1990 for personnel/payroll systems and in January 1991 for travel. Additional functional standards will be developed in 1991, starting with standards for procurement and credit systems.
- *Agency Financial Systems.*—In order to improve funding recommendations and policy guidance, OMB-led interagency teams reviewed in September 1990 the financial systems plans of five agencies: the Departments of Agriculture, Commerce, Transportation, and Veterans Affairs, and the Internal Revenue Service. In addition to agency-specific improvements, these reviews indicated the need for better integration of program and financial data, and for stronger OMB policy guidance, requirements, and monitoring. In 1991, OMB will address these needs and undertake additional agency reviews.
- *Central Agency Systems.*—Treasury and OMB have embarked on a major project to integrate their financial data bases by 1994. The first step, automating budget execution data through use of a Treasury data base, has already been implemented. As a result, in February 1991, the Government will know, for the first time, what its current unobligated balances are.
- *Audited Financial Statements.*—Annual, audited financial statements are essential to improving the quality and usefulness of financial data, and providing policy and program managers with reliable information on the operations and condition of their programs and agencies. The Administration's program would have provided such statements for all major agencies by 1994, but this program has now been superseded by the requirements of the Chief Financial Officers Act of 1990.

Chief Financial Officers Act of 1990 (CFOs Act).—The CFOs Act strongly reenforces the Administration's efforts to improve Federal financial management. First, it puts in place a powerful financial management organizational structure: 23 agency chief financial officers, and, within OMB, a Deputy Director for Management, a Controller, and an Office of Federal Financial Management. Second, the Act requires accountability—through detailed financial plans and status reports—from the agencies and from OMB. Third, the Act lays out a strategy for producing audited financial statements—beginning with revolving and trust funds, primarily commercial activities, and ten pilot agency-wide statements (for the Departments of Agriculture, the Air Force, the Army, Housing and Urban Development, Labor, and Veterans Affairs; the Bureau of Customs, the General Services Administration, the Internal Revenue Service and the Social Security Administration.)

Credit Management.—At the end of 1990, the Government's loan portfolio totaled about $840 billion, of which $210 billion was in direct loans and $630 billion in guaranteed loans. The Administration and the Congress have worked to strengthen management of this portfolio by improving organizational capacity, improving the quality of information provided to decisionmakers, and helping agencies reduce their risk exposure.

- *Improved Organizational Capacity.*—The CFOs Act charges agency chief financial officers with either directing and managing, or providing policy guidance and oversight of, "all financial management personnel, activities, and operations, including ... systems for credit management...." This is an important step toward getting agency credit programs on a sound financial footing. It complements an Administration initiative to strengthen the technical qualifications of credit staff. Since June 1990, the Federal Credit Policy Working Group, chaired by OMB, has been working on a core training curriculum and certification standards for Federal credit professionals. The initial curriculum and standards will be issued by June 1991.
- *Improved Information for Decisionmakers.*—The Omnibus Budget Reconciliation Act of 1990 reforms credit budgeting by requiring calculation of, and annual appropriations for, the subsidies inherent in direct and guaranteed loan programs. Beginning in 1992, budgets will reflect the real costs of Government credit. Credit reform will require credit agencies to become more accurate and accountable; there will be budget consequences for inaccuracy after 1994. In addition, the budget sets out, for the first time, allowances for doubtful debt for the Government's existing direct and guaranteed loan portfolios. Further, OMB's Five Point Program directly addresses the need for more accurate, consistent, and meaningful financial information on the Government's credit programs; and the CFOs Act requires, no later than 1992, annual audited financial statements for all credit programs.
- *Reduced Risk Exposure.*—In November 1990, OMB issued policy guidance regarding management of the Government's guaranteed loan programs. This policy guidance resulted from an intensive, government-wide study of ways to reduce the Government's risk of losses from its $630 billion guaranteed loan portfolio. The policy guidance sets out extensive requirements for lender qualification, standard lender agreements, lender reviews, portfolio management, inventory management, and asset disposition.

  In addition, through the Federal Credit Policy Working Group, OMB has developed "Early Warning Reports" that highlight, for each major credit agency, significant trends in portfolio performance and relevant economic indicators. These quarterly reports help to ensure that senior agency and credit officials have timely information on actual or potential problems in their credit programs.

Cash Management.—The Administration's goal is to convert the Government's $2 trillion plus annual cash flow, to the maximum feasible extent, to a fully electronic payment and collection system. This effort will save administrative costs, reduce borrowing, and improve service to the public.

- *Payments.*—A series of demonstration projects, started in 1990, are currently testing delivery of Federal benefits through automated teller machines and point-of-sale terminals. Aggressive implementation of the Prompt Payment Act has resulted in over 90 percent of Federal payments to vendors being made on time, avoiding interest and late payment penalties. (This compares with 84 percent of Federal payments made on time in 1986.) In addition, OMB strongly supports agency use of electronic payments through Vendor Express and the GSA Small Purchase Card.

  These efforts to improve the Government's payment systems have been reenforced by the Cash Management Improvement Act of 1990 and the Food, Agriculture, Conservation, and Trade Act of 1990. The Cash Management Improvement Act requires payment of interest when the Federal Government does not provide, or the States do not disburse, Federal funds in a timely and efficient manner. The Food, Agriculture, Conservation, and Trade Act requires establishment of electronic benefit transfer standards for the Food Stamp Program by April 1992.

- *Collections.*—Enactment of the Federal Debt Collection Procedures Act of 1990 will improve the prospects for Federal collections, by providing for uniform Federal procedures for enforcement of judgments to collect Federal debt. The Federal Tax Deposit Redesign Project—now in its testing phase and scheduled for completion in 1994—will automate the receipt, processing, and deposit of nearly $1 trillion in annual employer tax deposits. In addition, the Internal Revenue Service is studying the feasibility of offsetting tax refunds to businesses with delinquent Federal debt; and OMB and the Department of Treasury are working closely with agencies to implement mechanisms such as those involving lockboxes, pre-authorized debits, and credit/debit cards.

Expired Accounts Legislation.—During the summer and fall of 1990, OMB worked with the Congress to address concerns that inadequate controls over expired appropriation accounts had allowed inappropriate uses of the funds in these accounts. Comprehensive reform legislation was enacted as part of the National Defense Authorization Act of 1990. This legislation puts an end to agencies using expired accounts for indefinite periods; expired accounts must now be canceled five years after their establishment. The legislation also places significant restrictions on the use of expired account funds during that 5-year period. In January 1991, OMB issued government-wide guidance for implementation of the legislation.

ADDRESSING THE HIGH RISK AREAS

From the many hundreds of weaknesses exposed in reports required by the Federal Managers' Financial Integrity Act (FMFIA) and fresh assessments by agency heads, OMB identified, in October 1989, 106 high risk areas requiring priority attention. Since that date, 12 new areas have been added to the list, two areas have been merged, and 11 areas have been eliminated (sufficiently corrected so as no longer to require highlighting as a high risk). Of the 12 additions to the list, 5 are based on agencies' 1990 FMFIA reports (which were submitted to the President in December 1990). High risk areas are those where the Government's vulnerability is such that agency heads must personally see to their correction as a matter of priority.

OMB's commitment is to ensure that reasonable resources are provided in the budget to assist agencies in taking appropriate and timely corrective actions. OMB has also attempted to focus agency attention on these areas of high risk, and provide OMB and other staff assistance in selected areas. Over a third of the high risk areas involve financial management; the efforts described above under Financial Management are, in part, aimed at reducing risk in these areas. In addition, OMB agency teams have directly investigated problems in the Railroad Retirement Board, the Department of Education's Guaranteed Student Loan program, the Internal Revenue Service, and the Bureau of Indian Affairs. The Secretaries of Housing and Urban Development and Defense have made high risk corrections major Departmental priorities.

The results, however, have been mixed. In assessing the High Risk List prior to addition of five areas based on 1990 FMFIA reports, OMB found that:

- In 36 of the high risk areas, agencies had made significant progress in correcting the deficiencies (Status 1).
- In 42 of the high risk areas, active efforts were underway to improve progress in correcting the deficiencies (Status 2).
- In 23 of the high risk areas, OMB had reservations about the adequacy of agency plans and/or progress (Status 3).

There follows, at the end of this Chapter, a list of the high risk areas (organized by agency) that summarizes agency progress to date in correcting them.

1991 Priorities.—The Administration plans intensive efforts in 1991 with respect to the following high risk areas:

- *Department of Agriculture (USDA).*—In 1991, OMB will focus on USDA high risks related to the Farmers Home Administration and the Food and Nutrition Service's Food Stamp Program.

  —Farmers Home Administration (FmHA).—FmHA has embarked on a major endeavor to improve management

controls over loan making and loan servicing. A 14-State pilot (involving 42 percent of FmHA's loan volume) is underway to improve loan collection and property disposal efforts. In January 1991, OMB and the Department of Agriculture established a high level advisory committee to review progress on a regular basis, recommend improvements to the pilot, and facilitate solutions to problems outside FmHA control.

—*Food Stamp Program.* In its 1990 FMFIA report, USDA advised that illegal food stamp trafficking represents an area of high risk. An estimated $100 million in program benefits are illegally exchanged each year for cash and items such as drugs and weapons. In 1991, OMB will work closely with USDA to evaluate Food Stamp internal controls and alternative delivery mechanisms, such as electronic benefit transfer, to minimize this problem.

- *Department of Defense (DOD).*—In 1991, OMB will focus on DOD high risks in the areas of information systems, contracted advisory and assistance services, and property accountability.

—*Information Systems.*—The military Services and DOD agencies have, in the past, each developed and maintained separate data processing systems for common administrative functions. These redundant, overlapping, and non-standard data systems and communications seriously impede the efficient functioning of the Department. In November 1990, the Secretary of Defense approved the Corporate Information Management (CIM) Program, which is designed to correct these problems. CIM is designed to ensure integration of computing, telecommunications and information management activities, and implementation of policies, programs and standards governing the acquisition and operation of automated data processing equipment. In 1991, OMB designated CIM as a Priority System, ensuring OMB oversight of CIM implementation.

—*Contracted Advisory and Assistance Services (CAAS).*—The Department will implement in 1991 strengthened controls over contracts for advisory and assistance services. There will be a special focus on competition and contract approvals. Better controls will also be pursued over funding provided to Federally Funded Research and Development Centers and DOD funding passed through to projects managed by the Department of Energy. DOD expects that these increased controls will result in reduced Departmental reliance on advisory and assistance services and yield substantial savings during the period 1991–97. The DOD Inspector General continues to identify problems with the definition of CAAS, and to recommend increased attention to the cost-effectiveness of contractor support. OMB will in 1991 closely monitor DOD's efforts in this area.

—*Property Accountability.*—In its 1990 FMFIA report, DOD identified a new material weakness: inadequate financial accountability for real and personal property in the Department of the Army. The value of this property is estimated at $200 billion. Property systems maintaining line item accountability are not integrated with financial accounting systems, resulting in a lack of financial control over line item transactions. In 1991, OMB will closely monitor DOD efforts to correct this weakness in the Department of the Army, and will request that DOD determine the extent to which this weakness may also exist in the other Services.

- *Department of Education Guaranteed Student Loan (GSL) Program.*—The GSL program has long been recognized as a high risk area due to its statutory complexity and rapidly rising default costs. Administrative steps to begin to address the default problem were implemented in 1989. In the summer of 1990, a major student loan guarantor, the Higher Education Assistance Foundation (HEAF), faced insolvency due to its inability to cover a large number of defaults, primarily at vocational schools. Following Education and OMB staff review of HEAF's operating policies and financial condition, the Department of Education ended HEAF's authority to guarantee new loans and reached agreement with the Student Loan Marketing Association (Sallie Mae) to assume management responsibility for the HEAF portfolio in September 1990.

As part of the budget reconciliation negotiations in 1990, the Administration sought a package of GSL program restructuring and default reduction measures. Many of these were enacted, and, as a result, hundreds of schools that have been abusing the system are now barred from participation. Savings are projected at $1.7 billion over five years. In December 1990, a joint Education/OMB Management Review Team, with participation from other agencies and the private sector, was established to evaluate GSL program operations. Early in February 1991, the Team will provide the Department with a management improvement plan to strengthen the Department's administration of the GSL program and provide the capabilities necessary to manage a large financial enterprise. The Administration will also work with Congress in 1991 to improve the legislative foundation of the GSL Program, as part of the 1992 Higher Education Act Reauthorization.

- *Department of Energy (DOE) Environmental Clean-up.*—DOE is responsible for addressing the serious environmental, health and safety, and waste management problems caused by Government weapons production and nuclear facilities. DOE has an active program underway to correct these problems, and has completed "Tiger Team" assessments of 18 of its 36 facilities. However, the full extent of the problems is not known; planned corrective actions are not adequately prioritized; and reliable completion dates for corrective actions have not been determined. OMB will work with DOE in 1991 and 1992 to: ensure that environmental, health, and safety risks are being appropriately assessed; establish better means of prioritizing corrective actions based on risk assessment and effective allocation of scarce dollars; improve cost estimates and management and oversight of the cleanup program; and establish realistic, achievable plans for corrective action. OMB, DOE, the Department of Justice and other affected agencies will also seek to address the impact that employee liability issues are having on program accomplishments.

- *Department of Health and Human Services (HHS), Health Care Financing Administration (HCFA) Financial Systems.*—Effective operations of Medicare and Medicaid programs require accurate and timely program data. A system (nine regional data bases containing all beneficiary entitlement, utilization, and claims history data) has been developed for Medicare. Although this information should be convertible into management information reports to permit timely and accurate identification of payment problems, these reports have not been completed. A similar informational gap exists for Medicaid. Medicaid relies on quarterly State reports to determine Medicaid grants to States and estimate Federal Medicaid expenditures by hundreds of millions of dollars. These reports routinely misestimate Medicaid expenditures and provide little explanation for errors. HHS has established an *ad hoc* adjustment factor for budget estimates and has indicated its willingness to address the underlying problems associated with State reporting. During 1991, OMB will work closely with HHS to develop better program data systems.

- *Department of Housing and Urban Development (HUD).*—HUD programs account for 10 of the high risk areas. The passage of the Department of Housing and Urban Development Reform Act of 1989 and the National Affordable Housing Act of 1990, and the aggressive leadership of HUD management, have resulted in progress toward acceptable management controls within the Department. HUD quarterly reports on material weaknesses show continuing overall improvement. Key financial management officials are now in place: a Departmental Chief Financial Officer and five Controllers (including one at the Federal Housing Administration (FHA)). FHA has completed a management strategy and funding plan that provide management and staff with reasonable goals and understandable operational methods.

In 1991, OMB will continue to monitor HUD reform, notably the Department's development of a new 5-Year Financial Management Systems Plan and the Department's efforts to minimize on-going risks associated with terminated programs. In addition, OMB will be looking at the two new high risk areas identified in HUD's 1990 FMFIA Report—Modernization Projects (cost overruns and improperly awarded contracts) and FHA Title I Manufactured Housing Loans (excessive insurance claims through 1990 estimated at $500 million).

- *Department of the Interior's Bureau of Indian Affairs (BIA).*—The BIA has failed to address its long-standing administrative and financial management problems. Numerous Inspector General and General Accounting Office audits have reported problems in BIA control over tribal trust funds, operations of field finance offices, travel advances and vouchers, data systems, and individual Indian money accounts. A special Senate report issued in 1989 underscored BIA's management problems.

  In December 1990, in response to reports of significant year-end account reconciliation problems, Interior and OMB reviewed the BIA financial system. The review confirmed the audit findings, as well as OMB's assessment, that the Department's corrective action plans were inadequate. OMB and the Department collaborated in January 1991 in designing a plan to correct BIA management problems, particularly its accounting system problems, by October 1991. The Secretary of the Interior and the Director of OMB jointly announced in January 1991 the establishment of a special management team to approve all future transaction adjustments in the BIA financial system and assist in its complete overhaul and revamping.

  The budget provides $26 million ($12 million over 1991) to improve the management and accountability of programs serving Indian tribes and individual Indians. The budget also provides additional resources ($21 million over 1991) for a pilot program to improve Indian education, child welfare, reservation development, and road improvement programs administered by BIA. This increased funding is being proposed on a pilot basis only, due to BIA's longstanding and widespread problems in properly accounting for the use of funds. Any further funding of this program beyond the pilot will be strictly conditioned on improved BIA management and accountability.

- *Department of Justice Debt Collection.*—The Department of Justice has made progress in implementing central planning for its debt collection efforts, including those on behalf of other agencies; but more remains to be done. For example, the Department has not met the needs of referring agencies, OMB, and the Department of the Treasury for information on case status, plans for case resolution, and reconciliation of case values. OMB is working with the Department and the referring agencies, through the Litigation Subgroup of the Federal Credit Policy Working Group, to correct these problems, and has asked the Department to submit, by May 1991, a comprehensive corrective action plan. In December 1990, the Department appointed a senior official within the Deputy Attorney General's Office to coordinate Department debt collection activities.

- *Department of Labor Job Training Partnership Act (JTPA) Program.*—In its 1990 FMFIA report, the Department identified the JTPA program as a high risk area, due to inappropriate procurement practices by some Service Delivery Area administrative units. Problems have included: payment for inadequate performance; lack of competition in contracting; actual or apparent conflicts of interest; and inadequate contract monitoring. A number of these issues were addressed in the Administration's proposed JTPA amendments, which were transmitted to Congress in June 1989. The Administration will repropose legislation designed to strengthen JTPA's fiscal integrity. In 1991, OMB will work closely with the Department in implementing planned corrective actions.

- *Department of the Treasury's Internal Revenue Service (IRS).*—In the summer of

1990, a joint OMB/Treasury/IRS Work Group was established to define long-term IRS resource needs and performance expectations. A key aspect of the Work Group's mission has been to address, through proposals for IRS improvements and additional IRS resources, the need for increased collection activity and taxpayer compliance. The budget reflects the Administration's commitment in both areas. In 1991, the Work Group will analyze IRS long term needs in the area of tax systems modernization.

At the end of 1990, IRS delinquent accounts receivable totaled more than $61 billion, including an estimated allowance for doubtful accounts of $17 billion. This estimated allowance is preliminary.[1] It in no way changes the IRS enforcement responsibilities for all unpaid tax accounts. By September 1991, the IRS will present a detailed analysis of accounts receivable collectibility and a corresponding allowance for doubtful accounts.

- *Department of Veterans Affairs (DVA) Loan Guaranty Fund.*—The DVA has made progress in developing alternatives to foreclosure for defaults on guaranteed single family mortgage loans. However, DVA portfolio management could be improved through a more systematic approach to detecting, monitoring, and reacting to variations in credit underwriting practices and changing economic conditions. In 1991, OMB will work with the Department to begin addressing this situation through selection and testing of a model for predicting DVA defaults. The budget provides DVA with $367,000 in 1992 to implement this model and enhance the Lender Monitoring Unit's capacity to oversee loan servicers as well as loan originators.
- *National Aeronautics and Space Administration (NASA) Contractor Oversight.*—During 1990, NASA conducted—in collaboration with OMB—an analysis of its staffing, including a thorough review of its reliance on contractors (rather than NASA staff) for various programs and services. The principal conclusion of the study was that too few staff resources had been available to monitor and oversee NASA contractors—resulting in decreased quality and timeliness in contractor performance. To correct this situation, NASA established in 1990 a Headquarters Contract and Subcontract Management Branch, and expanded contract management training of NASA staff. Further, NASA's personnel ceiling for 1991 includes a sizeable increase for project management (including staff increases for the contract administration function). The budget provides for continued increases in NASA staffing for that function. In 1991, OMB will monitor the results of the 1990 and 1991 investments in improving NASA's contract management.
- *Railroad Retirement Board (RRB).*—In April 1990, OMB led a management review of the operations and programs of the RRB. The RRB's Inspector General had previously identified large mass adjustment backlogs in retirement and survivor annuities, program fraud, problems in railroad tax compliance, uncertainty about the integrity of the RRB's trust funds, and weaknesses in managing accounts receivable. Further, the RRB's 1989 FMFIA report acknowledged 20 material weaknesses and an inability to certify the adequacy of controls for the Board's biggest benefit program.

  Following a two week on-site review, a 20-person interagency review team issued a report documenting 42 findings and recommending 104 corrective actions. The report formed the basis for an OMB Management Review Hearing in June 1990. In December 1990, RRB and OMB negotiated an agreement whereby $14 million was placed in the budget (to remain available through 1996), but subject to annual apportionment releases as RRB problems are solved. It is specified that "these funds are to supplement, not supplant, existing resources devoted to such operations and improvements." These actions and funding provide the RRB with the means to achieve substantially improved service to RRB beneficiaries and to restore a basis for confidence in the operations and integrity of the Railroad Retirement System.

---

[1] The estimated allowance is based on a 1988 study of IRS accounts receivable conducted by Price Waterhouse. The estimate assumes that approximately 40 percent of delinquent amounts beyond the 6-month notice stage may not be collected, as a result of abatements (due to IRS or taxpayer error) or less than full payments. The estimate does not allow for conversions into repayment due to stepped up efforts of the IRS to collect on tax delinquencies.

INFORMATION RESOURCES MANAGEMENT

The Paperwork Reduction Act requires OMB, through its Office of Information and Regulatory Affairs (OIRA), to work to improve the Federal Government's management of information resources. Information resources management (IRM) is a critical area—not only because information resources constitute a growing portion of agencies' expenditures, but also because the Government is so dependent on information technology to operate its programs. The earlier section outlining OMB activities to implement the CFOs Act indicates the extent to which both the Congress and the Executive Branch recognize this. OIRA's recent IRM initiatives include:

- Reviewing, with assistance from the National Institute of Standards and Technology and the National Security Agency, computer security oversight, especially where computer security is identified as a material weakness (posing risks to the integrity of data and programs).
- Beginning development of a government-wide policy on the dissemination of government information (ensuring that information created at taxpayer expense is accessible, on an equal and equitable basis, to all users).
- Revising OMB Circular No. A–130, "Management of Federal Information Resources," which establishes Federal policies and procedures to guide agencies in managing information resources.
- Improving records management policies so as to help agencies identify and deal with electronic records.
- Issuing guidance on what agencies may charge for records under the Freedom of Information Act.
- Issuing guidance to help agencies implement the Privacy Act.
- In concert with the Office of Federal Procurement Policy, promoting the use of electronic data interchange between the Government and its business partners in order to reduce paperwork and eliminate errors.
- Integrating agency paperwork reduction efforts and the annual Information Collection Budget into overall agency IRM planning process.
- Conducting the Program for Priority Systems, explained in the following section.

Priorities

The Program for Priority Systems (PPS) was established in 1984 to provide visibility and give impetus to efforts to improve Government service delivery and administration through more effective use of computer and related information technology. One objective of PPS is to involve top management in the planning (including cost-benefit analysis) for Federal uses of modern information technology, particularly in setting directions and making critical decisions for its development and use. PPS projects are selected for their size, complexity, sensitivity, or proposed use of a precedent setting technology or approach. The PPS provides an opportunity to identify and facilitate successful information management practices and technologies in areas where they are critical to Government services and management.

Two PPS information systems have advanced sufficiently, so that they no longer require PPS planning assistance. These are the Department of Commerce's Advanced Weather Interactive Processing System (AWIPS–90) and its Patent and Trademark Office automation plan. Two new systems, the Defense Corporate Information Management (CIM) program and the FBI Integrated Automated Fingerprint Identification System (IAFIS), have been added to the program as presented below.

Internal Revenue Service's (IRS) Tax Systems Modernization (TSM).—The IRS has made substantial progress in defining the information and systems architecture for the TSM. It will provide a modern automated approach to processing taxes. TSM will decentralize to the ten service centers many of the processing functions currently performed at IRS' central computing centers. TSM should reduce the paperwork burden associated with the filing of tax returns and enable the IRS to respond to taxpayer inquiries faster and with more accurate information. The IRS will, during 1991, update and publish an approved Design Master Plan that outlines the IRS systems architecture in more detail and lays out plans for transition from the current to the target architecture. The budget includes $4.8 billion for TSM from 1990 through 1996.

General Service Administration's FTS 2000.—The Federal Telecommunications System (FTS) 2000 is a nationwide, interagency telecommunications system that uses digital switching and fiber optics technology to provide voice, data and video communications services. Two 10-year contracts (aggregating up to $25 billion) were awarded in December 1988 to replace the existing FTS voice communications network. The transition for 1.2 million Federal users from the old FTS was completed ahead of schedule in June 1990, saving agencies $75 million in 1990. The new FTS 2000 is expected to save $200 million in 1991 on voice services alone. By law, the system is mandatory for use by Federal agencies.

In addition to providing such enhanced voice services as teleconferencing, calling card authorization codes, call screening, and "800" service, FTS 2000 offers a wide variety of computer-to-computer data communications services (including packet switching, electronic mail, video teleconferencing, and integrated voice-data service). Detailed billing information will improve agencies' ability to control costs. In 1992, GSA will continue to bring agency data communications onto the FTS 2000 network to improve the ability of Federal agencies to share weather, law enforcement, and financial information. GSA will also conduct a recompetition between the two incumbent vendors to help keep prices competitive with commercial services.

Social Security Administration's Strategic Plan.—By the year 2000, the number of beneficiaries is expected to reach 45 million, and the benefits disbursed will increase to over $250 billion. During the 1980s, SSA developed and implemented its System Modernization Plan, updating the computer and telecommunications facilities supporting major SSA programs. This modernization provided for significant increases in productivity and allowed SSA to replace its 1950s technology. SSA is expected to formulate a strategic plan, in the spring of 1991, to provide for the next stage of improvements. In addition to meeting increased workload, the SSA plan will attempt to improve service to existing beneficiaries. The improvements will include pre-retirement notification of benefit status and eligibility and increased reliance on electronic communication with the public.

Governmentwide Financial Management System (FMS).—Government standards call for a single primary financial system in each major agency. The objective is to integrate agency financial systems with other administrative systems (e.g., payroll, loans, etc.) and with major program systems. This PPS will integrate agency primary systems, Treasury's system, and OMB's system to form a single governmentwide system. The FMS will provide quality financial information to all levels of management and improve control of the Government's budget and other resources.

Securities and Exchange Commission's (SEC's) Electronic Data Gathering, Analysis, and Retrieval (EDGAR) System.—The SEC receives 200,000 disclosure documents annually from 13,200 registrants (9 million pages per year). The EDGAR system automates, in electronic format, the filing, processing, and dissemination of disclosure documents—ensuring more rapid information flows to financial markets and as a result more effective reviews of SEC filings, greater market efficiency, and more productive allocations of capital.

The SEC has operated a pilot EDGAR program since 1984. In 1987, it revised the proposed operational program design to fund the complete receipt, acceptance, and review process for required filings. The SEC awarded a contract in January 1989 to implement the EDGAR System by 1997, at a currently estimated cost of about $77 million over its life.

Federal Aviation Administration's (FAA's) Advanced Automation System.—The FAA has been provided $1.5 billion to modernize computer systems supporting air traffic control as part of its responsibility for ensuring safe and efficient operation of airways and airports. FAA's Advanced Automation System (AAS) will be the backbone of the entire air traffic control system. The modernized system will include new controller work stations, advanced communications, and greater use of satellite navigation technology. By 2000, the new system will annually support 185 million aircraft operations, 27 percent more than at present. It will also generate fuel savings and reduce maintenance personnel costs. The budget provides $716.9 million in 1992 for this system.

Interagency Border Inspection System (IBIS).—Three agencies (State, Customs, and the Immigration and Naturalization Service) created IBIS, a shared system, to assist law enforcement officials at the border in identifying individuals of interest. By December 1990, IBIS was operating at 17 airports handling two-thirds of the 30 million travelers arriving each year in this country by air. In 1991, IBIS will be tested at three land border entry points. In addition to budgetary savings from resource sharing, IBIS has freed Customs inspectors to move among travelers and expedite those who warrant no more than a cursory inspection. IBIS will also improve border law enforcement through ensuring cooperation in the development of border information systems. Although total IBIS costs are only about $10 million annually, this system is proving to be a model of interagency cooperation.

Defense's Corporate Information Management (CIM) Program.—As noted above in the discussion of high risk areas, in October 1989, the DOD initiated CIM as an effort to eliminate unneeded redundancy in automated information systems across the Department. The CIM effort will identify common business areas (e.g., inventory, payroll, warehousing) and develop uniform information requirements and data formats. Later, these requirements will be incorporated as review criteria for systems acquisitions.

CIM was added to the PPS in 1991 for its promising approach to information management. The program has completed the concept development phase, and CIM functional groups are studying various areas where improved methods and requirements would be developed.

FBI's Integrated Automated Fingerprint Identification System (IAFIS).—The IAFIS is the keystone of the FBI Identification Division's modernization initiative which includes relocation of fingerprint services to Clarksburg, West Virginia. The IAFIS will be a rapid response, paperless system that will receive and process electronic fingerprint images, criminal histories, and related data on convicted felons. Providing access to the data through the National Crime Information Center (NCIC) 2000 network will allow 63,000 Federal, State and local law enforcement users to receive fingerprint identification data in hours instead of weeks. The FBI is currently preparing the requirements and concept studies for the IAFIS.

PROCUREMENT REFORM

The Administration continued in 1990 its efforts to reduce and eliminate red tape, excessive delays, "influence peddling" and outright fraud in administering the Federal Government's $200 billion procurement budget. While program offices and Inspectors General continue to ferret out criminal wrongdoing, agencies and OMB's Office of Federal Procurement Policy (OFPP) have developed new policy approaches to streamline and improve the procurement process. These address not only the types of goods and services bought, but also the procedures used to acquire them. They emphasize looking first to the commercial marketplace—for both services and products—and ensuring that the procurement process is open, fair and free of bias.

Contracting for Services.—Over the past decade, the Government's purchase of services from the private sector has grown in real terms by over thirty percent—almost five times more than the growth rate for the purchase of supplies and equipment. Today, the Government spends roughly as much on purchased services as it does for civilian personnel. These services range from such routine activities as mowing lawns on military installations to developing high technology proposals for new aerospace systems.

The General Accounting Office (GAO) and others have articulated a number of concerns with service contracting. These include cost overruns and delays; and problems of performance, violations of law, and bias. Questions have also been raised about contracting in "inherently Governmental" areas. For its part, industry has argued that "fixed price", low-bid contracting is inappropriate for acquiring sophisticated professional and technical services—placing as it does too much emphasis on price as opposed to quality, and providing insufficient flexibility for contractors to use innovative methods to accomplish the Government's objectives.

OFPP published in the Federal Register in September 1990 a draft policy letter for comment which directly addresses these concerns. The policy would require Government officials to look to quality as well as price, define their needs at the time of contract award, and emphasize "what" should be accomplished (not "how" the work should be performed). A final policy letter will be published in February 1991, and regulations carrying out the policy will be issued by July 1991.

Consultants.—The key rulemaking agencies (Defense, NASA and GSA) published regulations in the Federal Register in October 1990 to implement OFPP's December 1989 Policy Letter on Conflict of Interest Policies Applicable to Consultants (developed at Congress's direction). The policy requires contractors to report whether they have conflicts of interest or enjoy an unfair competitive advantage. In 1991, the Administration will propose alternative legislative disclosure requirements that will ensure procurement integrity, while making the legal requirements more straightforward and understandable. Both existing law and the Administration's proposal include severe penalties for the misuse by Government officials, contractors or consultants of sensitive procurement information.

OFPP is working closely with the GAO to improve other aspects of the Government's use of consulting or advisory and assistant services. These efforts are aimed at two goals: defining more clearly the activities which constitute such services, and identifying those activities that should be considered "inherently Governmental." Policies in both of these areas should be published for comment in 1991.

Commercial Products and Technical Data Initiatives.—The Administration proposed legislation in April 1990 to authorize more flexible, commercial-style procedures for acquiring commercial products. Congress was, however, only prepared to enact a provision authorizing the Government to require offerors to show that the products being offered were commercial products, and even that legislation failed passage. However, the Congress did enact provisions which allow award to other than the lowest bidder for a defense contract, where factors other than price are important. The Administration will again seek enactment of its 1990 proposal to authorize more flexible procedures for the acquisition of commercial products, and will seek to extend government-wide the provisions to allow factors other than price to be considered in the award of a contract.

Existing procurement practices prevent the Government from tapping the best of American industry's commercial products. Too often, the Government interprets full and open competition to require the issuance of detailed specifications or the dissemination of proprietary technologies. These practices level firms' competitive advantages and take away their incentive to innovate and offer their best expertise. Ironically, these practices frequently are coupled with Government demands for cost and pricing or sales data in place of reliance on competition to ensure reasonable prices. This raises the costs and risks of Government contracts—causing firms, in some cases, to be unwilling to offer their goods to the Government.

Cost Accounting Standards.—The Cost Accounting Standards (CAS) Board, authorized by the Office of Federal Procurement Policy Act Amendments of 1988, was established in July 1990 to improve the consistency and accuracy of the cost accounting practices of firms doing business with the Government. The Board has exclusive statutory authority to make, promulgate, amend and rescind cost accounting standards and interpretations of those standards. It is chaired by the OFPP Administrator and includes two private sector members and two other Government members.

The Board has set, as its first priority, the recodification of the two rules in the Code of Federal Regulations affecting cost accounting standards into one coherent and logical rule. Special efforts will be made to ensure that no one relying on one of the existing sets of rules will be detrimentally affected by the transition to the new recodified Cost Accounting Standards. The Board has, in addition, decided to apply existing cost accounting standards to contracts of the civilian procurement agencies; national defense contracts are currently subject to CAS coverage. The Board has also agreed to establish a set of research priorities.

To provide for maximum public participation, the Board solicited in November 1990 recommended agenda items from affected contractors, as well as from Federal agencies and the general public. The response to this solicitation will form one basis for determining the major areas of focus of the Board over the next year.

PARTNERSHIPS WITH THE STATES

The Federalism Executive Order, E.O. 12612, establishes fundamental principles and policymaking criteria to guide Federal departments and agencies in developing and carrying out Federal policy. President Bush reaffirmed in a Cabinet meeting in February 1990 his commitment to Federalism and the Executive Order.

One tenet of Federalism is a commitment to State deregulation, in particular to not reimposing Federal regulations with respect to block grants. Block grants are designed to allow states and localities the flexibility to determine how best to serve their constituencies in administering Federal programs. The Administration is continuing its efforts to achieve the necessary balance between maintaining program integrity and accounting for Federal dollars, while, at the same time, assuring that States and localities are not overburdened by Federal administrative requirements. These balances were carefully maintained in promulgating final rules for the Department of Education's Chapter 2 block grant program and publishing proposed rules for the Department of Housing and Urban Development's Community Development Block Grant (CDBG) program.

Administration officials met with State and local elected officials and their representative organizations on the details and potential impacts of the President's 1991 Federal budget, and will do so again with respect to this budget. Forty-eight Governors urged, as a top priority, that there be no further Medicaid mandates for the next several years; in response, the Administration has proposed no new mandates.

In keeping with this spirit of cooperation and partnership, significant State and local government achievement and innovation are again highlighted in the States as Laboratories section of this budget.

PAY REFORM

The 1991 budget noted the deficiencies in the Federal civilian pay system, and indicated that the Administration would submit legislation to begin Federal pay reform. Much more than a beginning has been accomplished. Working closely with the Congress over the past year, the Administration was able to secure passage of a comprehensive Federal civilian pay reform bill.

The Federal Employees Pay Comparability Act (FEPCA), enacted in November 1990, made much needed structural changes to the pay system that make it more responsive and flexible. Among its major features, FEPCA provides for:

- a locality-based pay system that will reflect geographical variations in pay;
- special flexibilities, such as bonuses, that will permit the Government to respond to difficult or unusual staffing problems; and
- a requirement to develop, and institute, systems that strengthen the link between pay and performance.

With enactment of FEPCA, the Federal Government will now be able to compete more successfully for the skilled and dedicated employees that it needs to accomplish effectively its many complex and important missions.

MANAGEMENT INVESTMENTS AND SAVINGS IN THE 1992 BUDGET

The budget requests $29.5 billion in budget authority and $27.5 billion in outlays, $4.1 billion and $3.3 billion, respectively, more than in 1991—to improve service delivery, invest in financial management, reduce the risks in areas of high risk, and improve information resources management. The budget also highlights $4.1 billion in savings and/or increased receipts which will be achieved from selected management reforms, and a new initiative to improve Federal economic statistics.

Selected Improvements in Service Delivery

Internal Revenue Service.—Roughly 115 million tax returns are filed each year. The budget requests $6.7 billion and over 118,000 staff in 1992 for the Internal Revenue Service (IRS), $622 million more than in 1991. The IRS's budget specifically includes $450 million to enable it to continue to modernize the tax system to ensure that taxpayers pay the right amount and get their refunds promptly.

Social Security.—Over 40 million Americans receive Social Security payments. The budget requests $4.5 billion for operating the Social Security Administration, $375 million more than enacted in 1991. These amounts will help the Social Security Administration to continue replacing and upgrading obsolete computer systems and enhance the level of service provided to beneficiaries by claims representatives.

Railroad Retirement Board (RRB).—888,000 retired railroad workers and their families receive Social Security equivalent, Medicare and railroad pension benefits from the RRB. The budget requests $113 million for operating the RRB, $22 million more than enacted in 1991. As part of that increase, the budget requests a new Special Management Improvement Fund with $14 million in five year budget authority to finance reforms that evolved out of the joint RRB/OMB Management Review in 1990. The RRB has developed an agreement with OMB, complete with annual performance measures, to carry out these operational improvements. They should substantially improve service to America's railroad pensioners.

Civil Aviation.—Last year, Americans boarded commercial aircraft 457 million times. The budget requests $9.3 billion in budget authority for the Federal Aviation Administration (FAA), $1.3 billion more than in 1991. The budget will allow the FAA to increase the number of air traffic controllers, safety inspectors, and security personnel and procure equipment to modernize the National Airspace system.

Table A–1. **INVESTMENTS IN MANAGEMENT IMPROVEMENT**

(In millions of dollars)

	1991 Enacted	1992 Proposed	1991–92 Increase
Net Total:[1]			
Budget authority	25,402	29,525	+4,123
Outlays	24,242	27,519	+3,277
Selected Improvement in Service Delivery:			
Budget authority	18,206	20,546	+2,340
Outlays	17,388	18,966	+1,578
Investments in Financial Management:			
Budget authority	1,487	1,825	+338
Outlays	1,432	1,748	+316
Investments to Reduce Risks in High Risk Areas:			
Budget authority	6,234	7,912	+1,678
Outlays	5,922	7,516	+1,594
Information Resources Management Priorities:			
Budget authority	1,672	2,289	+617
Outlays	1,641	2,220	+579

[1] Budget authority and outlay totals for 1991 and 1992 are adjusted for duplication of items included in more than one category.

Table A–2. **INVESTMENTS IN FINANCIAL MANAGEMENT**

(Budget authority in millions of dollars)

	1991 Enacted	1992 Proposed	1991–92 Increase
Credit and Cash Management	1,035	1,118	+82
Audited Financial Statements	10	104	+94
Financial Systems	440	596	+157
Central Agency Systems and Standards	2	7	+5
Total	1,487	1,825	+338

Investments in Financial Management

The budget requests $1.8 billion for financial management improvements, $338 million more than enacted in 1991.

Credit and Cash Management.—The budget requests $1.1 billion for credit and cash management, $82 million more than enacted in 1991. The largest single agency increase in 1992 is $35 million to FmHA for a 14-State internal control pilot, accounting system improvements, and increased personnel costs (including salaries and training). $44 million is requested for the Departments of Education and Veterans Affairs and the Small Business Administration to improve guaranteed loan programs and debt collection. Treasury's Financial Management Service is requesting $6 million to improve credit and cash management activities governmentwide.

Financial Systems.—The budget requests $603 million for financial systems upgrades, $162 million more than enacted in 1991. (These amounts include Central Agency Systems and Standards funding of $7 million as reflected in Table A–2. They do not include financial system upgrades to be undertaken in 1992 as part of the Defense Corporate Information Management (CIM) Program. CIM funding requirements attributable to specific financial systems are still being defined). This funding provides for continued improvement of agency financial systems throughout the Government, as well as the integration of agency systems with upgraded central systems at Treasury and OMB. These improved agency and central systems will provide for more complete, accurate, and timely information for management of the Government's programs, and for disclosure of the Government's financial operations and condition through annual financial statements.

Audited Financial Statements.—The budget requests $104 million for audited financial statements, $94 million more than enacted in 1991. These amounts include $31 million for agency preparation of financial statements and $73 million for audits. The preparation and audit of financial statements will improve the quality of the Federal Government's financial data. The audits will also provide a means for identifying financial management deficiencies.

Reducing the Risk in High Risk Areas

The budget requests $7.9 billion to reduce the risk in high risk areas, $1.7 billion more than enacted in 1991.

The largest requested investment ($5.1 billion) is for the Department of Energy (including development and implementation of the Environmental Restoration and Waste Management Five Year Plan). Other significant requested investments include $533 million for Department of Justice prison construction and $243 million for Department of State security improvements at overseas posts. (See listing at the end of this chapter.)

Information Resources Management

The budget requests $2.3 billion for priority systems, $617 million more than enacted in 1991. The areas of emphasis are noted in the section on Information Resources Management.

Table A–3. **SUMMARY OF THE PROGRAM FOR PRIORITY SYSTEMS**

(Budget authority in millions of dollars)

	1990 Actual	1991 Estimate	1992 Proposed
SSA Strategic Plan	207	225	260
Tax Systems Modernization	158	278	451

FBI Automated Fingerprint Identification System[2]	....	....	....
Totals	1,395	1,672	2,289

[1] 1990 and 1991 adjusted to reflect change in reporting basis.

[2] Estimate not available because project in preliminary planning.

Illustrative Savings from Management Reform

The budget anticipates $4.1 billion in savings and/or increased receipts as a result of selected management reforms.

Defense Management Reform (DMR).—The budget reflects nearly $700 million in DOD management reform savings for 1992. Total savings for the period 1992–96 are expected to be about $10 billion. The combination of new initiatives and those announced last year are projected to yield savings of over $72 billion during the 1991–1997 period. The Department's implementation of DMR recommendations is being tracked in the Management by Objectives (MBO) system; the specific reforms are described in the Chapters on MBOs and Preserving National Security.

Improved Debt Collection.—The budget anticipates $2.7 billion in additional 1991 receipts from the collection of debt—$1 billion from delinquent tax debt and $1.7 billion from non-tax debt. At the end of 1990, total delinquent debt stood at $107 billion. Allowances for doubtful accounts stand at $105 billion at the end of 1990—$17 billion for tax debt and $88 billion for nontax debt. As noted above in the discussion of IRS under "Addressing The High Risk Areas", the estimated allowance for doubtful tax debt is preliminary. The composition of the allowance for doubtful nontax debt is detailed in Chapter VIII.A., Table A–9, "Actual and Anticipated Losses from the Government's Pre-Credit Reform Portfolio."

The growth in actual delinquent debt between 1989 and 1990 is shown in Table A–4. The 4.8 percent growth in tax receivables delinquent is due to factors such as increased penalties, stepped up enforcement, and the growth in taxes due. For loan receivables delinquent, most of the growth is due to the continued high rate of student loan defaults, over $2 billion in 1990. For other delinquent receivables, the growth is principally the result of first-time agency reporting to Treasury of $336 million for uncollected Medicare overpayments and $1.3 billion due to the Department of Energy's Petroleum Violation Escrow Fund.

- *Tax Debt.*—The budget includes $47 million for the second year of a 3-year tax collection initiative to slow the growth in tax debt. The additional 799 collection personnel hired in 1991 and the additional 922 budgeted in 1992 should, by themselves, increase collections by $757 million between 1991 and 1993. The IRS will develop a management improvement plan to increase collections by up to $2.25 billion through various initiatives such as: increasing the use of installment agreements; modifying non-filer notices to include a demand for payment; improving ability to locate and contact taxpayers;

Table A–4. **GROWTH IN DELINQUENT DEBT 1989–1990**

(Dollar amounts in millions)

	1989	1990	Dollar Change	Percent Change
Tax Receivables Delinquent	58,660	61,451	+2,791	+4.8
Loan Receivables Delinquent	27,265	29,870	+2,605	+9.6
Other Receivables Delinquent	13,147	15,549	+2,402	+18.2
Total	99,072	106,870	+7,798	+7.9

Source: Treasury Schedule 220–9.

streamlining the offer-in-compromise procedure; and expanding cooperation with State agencies.

- *Non-Tax Debt.*—The budget requests in 1992 $606 million and 10,224 staff to enhance non-tax collection efforts, $63 million and 478 staff more than in 1991. For example, 92 staff and $4 million have been added to enhance Department of Veterans Affairs collection of delinquent medical debt from third party insurers; additional collections of $185 million are expected from this investment. Legislation is under consideration to mandate the use by all agencies of special collection tools (e.g., Federal income tax refund offsets, use of private collection agencies, and Federal employee salary offsets).

- When all delinquency prevention and collection methods fail, the Department of Justice seeks recovery through litigation. The Administration has long recognized the need for improvements in the Justice Department's ability to collect debt referred by other Federal agencies (currently $6.5 billion). Additional recoveries of $35 million over 1991 are anticipated from implementation of a centralized prescreening and case tracking system and the Federal Debt Collection Procedures Act of 1990.

Davis-Bacon Reform.—The budget includes savings of $734 million in budget authority and $237 million in outlays from legislative and regulatory reform of the Davis-Bacon Act. Legislative reform will include proposals to raise the threshold for contracts subject to the Act's provisions from $2,000 to $250,000 and to reduce paperwork requirements. In addition, a Federal District Court has allowed implementation of a Department of Labor regulation permitting the use of "helpers" on Federally funded construction projects. Savings from implementation of the DOL regulation have also been included in the budget.

Economic Statistics Initiative

Federal economic statistics alter private and public spending patterns, move markets and

Table A–5. **DAVIS-BACON REFORM SAVINGS**

(In millions of dollars)

	1992	
	Budget Authority	Outlays
Federal Funds	387.5	168.0
Trust Funds	346.3	68.7
Total	733.8	236.7

drive Government policy. The budget requests nearly $30 million over 1991 enacted levels for an Economic Statistics Initiative that builds on the improvements requested in the 1991 budget. The Initiative provides for an increase of more than $200 million over the five year period 1992–96.

The Initiative includes: (1) modernizing the National Income and Product Accounts to improve their accuracy, breadth, and international comparability; (2) improving the coverage and detail of international flows of funds; (3) separating quality and inflation changes in price data; and (4) increasing the coverage of the service sector which accounts for more than 70 percent of total U.S. output. The Initiative is concentrated in three agencies: the Bureau of Economic Analysis, the Bureau of Labor Statistics, and the Bureau of the Census. Funds are also requested for the National Agricultural Statistics Service and the National Science Foundation.

In addition to these program improvements, the Initiative will result in fundamental changes in the Federal statistical system itself. First, through an accompanying legislative initiative, it will provide a standardized mechanism for limited sharing of confidential statistical information solely for statistical purposes between statistical agencies under stringent safeguards. This will improve data quality throughout the Federal statistical system. Second, the Initiative will help the Government acquire an improved statistical workforce by creating a graduate program specifically designed to meet Federal statistical survey needs. This program will improve the talents and skills of the existing workforce, and attract new highly qualified applicants to the Federal statistical system.

PROGRESS REPORT
CORRECTION OF HIGH RISK AREAS

This is a progress report on agency efforts to correct high risk areas. OMB's assessment of agency progress is presented in Column 3, "Status." The status codes are: (1) Significant progress; (2) Active efforts underway to improve progress; (3) Reservations about adequacy of progress and/or plans; (A) Added to High Risk List as a result of 1990 FMFIA report; (D) Deleted from High Risk List.

DEPARTMENT OF AGRICULTURE

(In thousands of dollars)

High Risk Area	Progress to Date	Status	1991 Estimate	1992 Proposed
Farmers Home (FmHA) Loan Programs: High total delinquencies ($13.4B) and high delinquency rates (23.2%) in 1990.	14-State pilot (involving 42% of FmHA annual loan volume) initiated to test separation of loan-making and loan-servicing functions. State plans approved in July 1990. Next steps: pilot staffs to be hired and trained in 1991. Initial assessment of pilot to be completed by June 1992.	2	45,668	64,265
Food and Nutrition Service (FNS): Food Stamp coupon and bank deposit data not reconcilable (difference of over $200M annually).	New depositing and reconciliation procedures put in place at all financial institutions as of September 1, 1990. Next step: evaluation of the national implementation of the system redesign will be performed by September 1991.	1	0	0
FNS Food Stamp Coupon illegal trafficking (est. $100M in benefits diverted annually).	In its 1990 FMFIA report, the USDA reports a new high risk area: Food Stamp coupons are being exchanged for cash and items such as drugs and weapons. Enhancements to policy and investigative techniques to undercover trafficking are underway. Electronic benefits transfer (EBT) systems that have been piloted in 3 States (MD, PA, and NM) may be a safeguard to prevent unauthorized third parties from abusing the program. ADDED TO HIGH RISK LIST.	A	....	....
Federal Crop Insurance: Overpayment of claims.	Improved management oversight by OMB and FCIC has resulted in a decreasing percentage of claims being overpaid (from 31% in 1985 to 13% in 1988). Next steps: more rigorous compliance reviews of reinsured companies to ensure adherence to the terms of the Standard Reinsurance Agreement.	1	5,598	5,690

DEPARTMENT OF COMMERCE

(In thousands of dollars)

High Risk Area	Progress to Date	Status	1991 Estimate	1992 Proposed
Departmental computer site security weak.	In accordance with the Computer Security Act of 1987, plans for the security of sensitive systems were completed and NIST/NSA comments incorporated. Next step: implementation of plans already underway.	2	2,498	2,448

DEPARTMENT OF COMMERCE—Continued

(In thousands of dollars)

High Risk Area	Progress to Date	Status	1991 Estimate	1992 Proposed
Departmental financial systems inadequate. Department lacks a core financial system.	Previous attempt to develop core financial system unsuccessful and OMB finds 1990 systems plan flawed. DOC has taken corrective action, including the establishment of a new Office of Financial Management with responsibility for all financial systems development. OMB continues to have reservations about the adequacy of DOC actions until a financial management plan is received and reviewed; DOC believes that there are active efforts underway to improve. Next steps: a plan for systems improvement is under development; 1992 funding provides for initial systems development.	3	250	3,000
National Weather Service (NWS): Major systems acquisition problems ($114M at stake in 1991).	A range of major systems, procurement and management issues adversely affect the ability of the Department and NOAA to acquire major systems, particularly for the Weather Service's modernization. Next steps: in 1991, DOC and NOAA senior management will implement an action plan to strengthen systems management, acquisition and administrative controls over major systems implementation.	3	164,106	221,503
Minority Business Development Agency (MBDA): Inadequate grants management ($44M at stake in 1990).	Despite marginal improvements, 44% of grants were processed late in 1990. Funding of special projects criticized by IG. Private consultant study performed. OMB has reservations about the adequacy of agency progress; DOC believes that with the appointment of a new Acting Director and a strong commitment to implement the study recommendations, there are active efforts underway to improve. Next steps: implementation plans are being developed based on study recommendations. Special project funding has been frozen in the interim.	3	200	100
Patent and Trademark Office (PTO): Problems in automating systems.	Long term effort to automate patent and trademark paper files. Revised program that experienced delays in the past is back on track. Next steps: identifying the functional, data and performance requirements for the next generation of electronic trademark searching, and evaluating the desirability of further expansion of the automated Patent Search system data base. DOC, in its 1990 FMFIA report, states that this high risk has been corrected and proposes dropping it from the High Risk List; OMB will review this request in February 1991.	1	54,302	69,069

DEPARTMENT OF DEFENSE

(In thousands of dollars)

High Risk Area	Progress to Date	Status	1991 Estimate	1992 Proposed
Departmental and Service supply operations inadequate, weakening effective management of inventories ($103B at stake).	Defense Management Report (DMR) actions have produced major improvements. 9 of 29 material weaknesses resolved. Major changes: supply depots consolidated; inventory points centralized from Services to Defense Logistics Agency (DLA). Problem area: private contractor access to DOD supply system inadequately controlled. Next steps: current DMR initiatives will continue as part of an overall inventory reduction plan. Policy and procedure revisions scheduled for completion in 1991 to address private contractor access weakness.	2	80,000	20,500

DEPARTMENT OF DEFENSE—Continued

(In thousands of dollars)

High Risk Area	Progress to Date	Status	1991 Estimate	1992 Proposed
Departmental and Service information technology development and ADP security deficient ($9B at stake for general purpose ADP).	Eleven of fifteen identified weaknesses have been addressed. DOD is developing a Corporate Information Management System (CIMS) that: improves information life cycle management; eliminates multiple information systems; and standardizes and improves the quality of MIS. As part of CIMS and other initiatives, ADP equipment acquisition and inventory controls will be enhanced. Problem areas: ADP security and system support for MIS; these are being addressed. Next steps: CIM initiative planned for implementation during 1991 through 1995. Over 100 information resources management reviews are planned for 1991.	2	364,700	395,700
Foreign Military Sales (FMS) Program: unreconciled balances ($170B of active cases at stake).	1990 FMFIA report shows 3 of 5 weaknesses corrected. No new unreconciled balances following major revisions in accounting procedures. New integrated financial management system now charges customers for costs and surcharges. Most unreconciled balances are resolved. DOD believes that significant progress has been made in this area; OMB maintains its assessment that active efforts are underway to correct this deficiency until there is an opportunity to evaluate DOD's recent accomplishments. Next steps: reconcile remaining out of balance conditions, specifically case level detail records with country level summary records.	2	N/A	N/A
Departmental and Service controls over DOD property in private contractor possession and post-award oversight inadequate. (Contractors held $56.5 billion in DOD property in 1989.).	Significant progress in resolving the eight identified weaknesses including: improved oversight by Contract Administration Offices; better documentation for contract awards; improved monitoring of subcontractors by prime contractors; better controls over acceptance of material into DOD inventory. DLA and Service components implementation plans are on schedule. DMR initiative will streamline and provide improved ADP systems for management purposes. Next steps: CIM plans in 1991 to develop functional requirements needed to gain auditable control of government material held by contractors.	2	15,000	N/A
Departmental and Service controls over contracted advisory and assistance services (CAAS) inadequate or non-existent (almost $2B at stake in 1990).	Major reductions in CAAS expected in 1991 and outyears as a result of a DMR initiative. Policy changes were implemented to improve control over CAAS expenditures. The DOD Inspector General continues to identify problems with the definition of CAAS, and recommends that the cost-effectiveness of contractor support for continuing requirements be given more attention. Competition and the use of firm-fixed-priced contracts for CAAS can be increased. Next steps: DOD plans to revise the definition of CAAS and develop CAAS reporting, accounting and tracking requirements during 1991.	2	N/A	N/A
Departmental and Service financial accountability for real and personal property is inadequate ($200B at stake in Army).	In its 1990 FMFIA report, DOD identified a new material weakness: inadequate financial accountability for real and personal property in the Department of the Army. Property systems maintaining line item accountability are not integrated with financial accounting systems, resulting in a lack of financial control over line item transactions. Next steps: in 1991, OMB will closely monitor DOD efforts to correct this weakness, and will request that DOD determine the extent to which this weakness may also exist in the other Services. ADDED TO HIGH RISK LIST.	A	....	....

N/A=Not available.

DEPARTMENT OF EDUCATION

(In thousands of dollars)

High Risk Area	Progress to Date	Status	1991 Estimate	1992 Proposed
Student Financial Aid (SFA) Program Management: Guaranteed Student Loan and other SFA program abuses and fraud. Loan defaults are increasing by nearly $1B (est.) annually.	Default and Accreditation, Certification, and Eligibility initiatives underway; Guarantee agencies being reviewed to determine financial condition; legislative proposals being developed. Next steps: Education-OMB Management team formed to recommend management improvements by February 1991.	2	12,643	29,343
Departmental inability to generate reliable accounting data.	Limited improvements made in reconciling subsidiary and program accounts to primary accounting system. Next steps: begin integration of accounting and payment management systems by September 1991.	3	7,234	8,934
Departmental contract and grant award and closeout. Vulnerable to unauthorized drawdowns ($400M).	Automated closeout system being developed as part of Payment Management System. Next steps: automated suspension of funds will be operational in June 1991.	2	866	366
Departmental internal control process weak in identifying material weaknesses.	Two Senior level committees established to look at weaknesses. Greater management and program attention to internal controls. Next step: implementation of Common Audit Resolution System (CARS) will begin in April 1991.	1	613	1,313
Departmental program compliance monitoring and accountability inadequate.	Department and IG staff are instituting a comprehensive grant monitoring and evaluation effort in 1991 and 1992. Next steps: 1991 and 1992 funding increases provided for additional monitoring staff, increased travel for on-site monitoring (travel funds increase 35% in 1991 and an additional 10% in 1992).	2	16,250	32,450
Departmental security of computer systems inadequately reviewed.	Security of the most sensitive systems being reviewed through implementation of the Computer Security Act of 1987. Next steps: five ADP systems will have complete security reviews by end of 1991.	2	582	582
Office of Special Education and Rehabilitation Services: Allegations of mismanagement.	Management improvements have been implemented. DELETED FROM HIGH RISK LIST.	D	....	....

DEPARTMENT OF ENERGY

(In thousands of dollars)

High Risk Area	Progress to Date	Status	1991 Estimate	1992 Proposed
Defense nuclear production capabilities shut down.	Modernization Review Committee established; design contracts awarded for two production facilities; quality assurance program implemented; reactor operations manual issued. Next steps include environmental impact statement for new production reactors and reconfiguration of Five-Year Plan by the end of 1991.	1	382,000	533,500

DEPARTMENT OF ENERGY—Continued

(In thousands of dollars)

High Risk Area	Progress to Date	Status	1991 Estimate	1992 Proposed
Nuclear plant environmental problems.	Established (i) separate organization to develop and implement Environmental Restoration and Waste Management Five-Year Plan and (ii) in-house capacity to conduct reviews (tiger teams). Published Five-Year Plan and initiated priority 1, 2, and 3 activities; conducted 18 tiger team reviews; and provided training to senior and mid-level managers. Even though active efforts are underway to improve progress, reservations about the adequacy of progress remain, however, because the total extent of the problem, as well as the costs and time frames for corrective action, are unknown. Also, improvement projects are not adequately ranked by priority and tracking systems are incomplete and overlapping. Next steps include developing a risk based priority system by the end of 1991, completion of tiger team reviews by 1992, establishing a central tracking system, and continuing implementation of Five-Year Plan.	3	3,103,067	4,046,477
Nuclear plant health and safety problems.	Established Offices of Nuclear Safety and Health; conducted 18 tiger team reviews and over 100 technical safety appraisals; and strengthened training program. Even though active efforts are underway to improve progress, reservations about the adequacy of progress remain, however, because tiger team assessments remain to be completed and comprehensive epidemiological data are unavailable. Next steps include revising nuclear safety rules and enforcement policies and modifying criteria for awarding contractor fees to emphasize safety by the end of 1991, conducting remaining tiger team reviews and establishing comprehensive epidemiological data by the end of 1992, and correcting safety deficiencies over the long term.	3	105,225	159,409
Nuclear waste storage and acquisition and contract management inadequate.	Plan for restructuring program initiated; completed Safety Analysis Report for the Waste Isolation Pilot Plant; modified contractor award fee review process; expanded reviews of field procurement operations; and strengthened Energy Systems Acquisition Advisory Board. Next steps include initiating the test program at WIPP in 1991, determining site suitability of Yucca Mountain by 2001, and implementing changes to contractor indemnification and award fee structures by 1992.	2	299,208	372,518
Departmental oversight of commercial functions is inadequate. ($8B at stake in 1990).	Established organization to provide central oversight of pricing practices; implemented pricing procedure to recover the full cost of employees involved in reimbursable work; and revised contractor purchasing review guidelines. Next steps include a Department-wide review of commercial functions in 1991 to include policies and oversight of Power Marketing Administrations, work for other Federal agencies, uranium enrichment, waste disposal receipts from utilities, oil price overcharges, and isotope production.	2	493	252

DEPARTMENT OF HEALTH AND HUMAN SERVICES

(In thousands of dollars)

High Risk Area	Progress to Date	Status	1991 Estimate	1992 Proposed
Food and Drug Administration (FDA): Application review process for generic drug approval faulty.	First-in, first-out (FIFO) review procedure established; 29 review guidelines issued: Ombudsman and Office of Generic Drugs created; special audits of 36 firms with 3,250 drug approval applications. Next step: in 1991 PHS will conduct a followup review of the generic drug application process to ensure corrective results have been achieved. HHS, in its 1990 FMFIA report states that this high risk is almost corrected and will propose dropping it from the High Risk List following a final management assessment.	2	46,500	52,100
Health Care Financing Administration (HCFA): Financial systems inadequate to predict Medicare/Medicaid costs.	Accurate and timely Medicare program accounting data needed for proper program management. Establishing common Medicare patient database (CWF) and developing data base management system for report generation. (Better Medicaid data also needed to identify problems and estimate costs.) Next steps: during 1991 complete development of Medicare reports with costs by function, and work with HCFA to improve Medicaid information systems.	3	14,800	8,000
HCFA: Medicare payment safeguards provide insufficient "medical necessity" checks ($1.8B at stake in 1992).	Common Medicare patient database to isolate unnecessary medical procedures partially implemented; additional HCFA guidance on safeguard activity provided to contractors. Next steps: during 1991, management should be able to increase savings by improving prepayment reviews and targeting audits.	1	282,400	282,400
HCFA: Medicare making payments which should be made by others ($600M at stake in 1992 from data match).	IRS-SSA W–2 data match instituted; Medicare claim form modified; employer questionnaire implemented. Next steps: during 1991 manually pursue leads generated by IRS-SSA data match. The budget proposes support for implementation of the Government's insurance information Clearinghouse.	1	55,100	55,100
Social Security Administration (SSA): SSA and IRS not reconciling earnings records (1978–87).	Corrected problem leading to backlog; two requests for information sent to employers accompanied by telephone followup for large cases; SSA's efforts to reconcile tax years 1978–87 completed. DELETED FROM HIGH RISK LIST.	D	....	....
Indian Health Service: Insufficient financial controls and attention to management ($1.5B (BA) at stake in 1992).	During 1990, IHS recognized the magnitude and scope of its problems, developed the QM initiative to address these weaknesses, and, in late 1990, began instituting corrective actions such as implementing travel voucher controls. Although work continues, new weaknesses, such as budget execution controls, continue to be identified through IHS and IG reviews. HHS believes that there are active efforts underway to improve progress. Reservations remain, however, because the full scope of the problem may not be known. Next steps: during 1991, IHS and HHS management need to exercise extensive oversight and tracking to keep improvement efforts on schedule so that planned results can be realized. FMFIA and other reviews will continue to identify management and operational weaknesses. The budget provides additional resources for financial management staff ($5M) and for ADP ($1M).	3	830	6,400

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

(In thousands of dollars)

High Risk Area	Progress to Date	Status	1991 Estimate	1992 Proposed
Departmental data systems fail to verify tenant information in Section 8 subsidy program ($10B at stake annually).	Computer match with SSN established to verify income; contractor reviewing program and drafting action plan. Integrated information processing system being built to address this and other major data processing concerns. Next steps: finalize action plan by February 1991.	2	4,894	19,577
Departmental core accounting system lacks controls and security.	HUD has hired CFO and Comptrollers for Administration, FHA, Public and Indian Housing, Community Planning and Development, and Government National Mortgage Association. Contract awarded to identify by end of March 1991 corrective actions needed. Next steps: review and, where appropriate, implement recommendations.	3	4,791	6,625
Departmental: Secretary's discretionary loan management set-aside funds produce arbitrary awards ($5M at stake annually).	For 1990, clearer policies established to ensure open and competitive bidding in accordance with 1989 HUD Reform Act. In 1991, program abolished. DELETED FROM HIGH RISK LIST.	D	....	....
Federal Housing Administration (FHA): High defaults in multifamily coinsurance (program incurred $960M in losses from inception to 1989).	Program terminated (no new liabilities). HUD needs closely to scrutinize claims submitted by lenders ($544M in 1990). Next step: develop a plan to minimize continuing losses by July 1991.	3	246	1,024
FHA distributive shares and insurance premium refunds delayed and miscalculated.	Automated audit trails and sampling process installed to identify error rates and size of overpayment. The National Affordable Housing Act of 1990 suspends payment of distributive shares unless FHA fund is actuarially sound. Next steps: verification review to be completed by March 1991.	1	10	0
FHA single-family property disposition controls inadequate ("Robin HUD") ($3B at stake in annual property sales).	Standard contract and bonding requirements for area management brokers have been implemented. Next steps: complete installation of new property management system by September 30, 1991.	2	9,857	9,000
FHA Retirement Service Center program has excessive default claims.	Reviewed some Centers; proposed regulation to terminate program published in Federal Register on 11/23/90; awaiting public comments. HUD needs to develop plan to minimize continuing losses. Next steps: publish final regulation by May 1991.	3	14	(1)
FHA: Section 8 moderate rehabilitation overpayments and non-competitive awards (IG estimates $ 413M in overpayments).	Program reformed in 1989 but received no funding in 1991. Program abolished in 1992 by recent National Affordable Housing Act. Reviewed rents of 60 projects funded since 1984. Next steps: reduce excessive rents and collect subsidy overpayments where warranted. To be completed by March 31, 1991.	1	14	(1)
FHA single-family mortgage insurance (MMI Fund) risks insolvency (lost $1.4B in 1988 on accrual basis).	$45B is underwritten every year. Investors/non-homeowners eliminated from program in 1990; vacation houses eliminated in 1991; stricter appraisal standards being implemented. National Affordable Housing Act of 1990 raised insurance premiums and made other program reforms to reduce defaults. Next steps: monitor implementation of legislation and check for adverse selection problems.	2	0	0

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT—Continued

(In thousands of dollars)

High Risk Area	Progress to Date	Status	1991 Estimate	1992 Proposed
FHA Title I Manufactured Housing Loans have excessive claims (costs to FHA and GNMA over $500M).	Program does not require normal real estate underwriting procedures, such as on-site property inspection. Many lenders not evaluating borrower creditworthiness, and not monitoring dealer compliance. HUD looking into program redesign. ADDED TO HIGH RISK LIST.	A	....	....
Public and Indian Housing (PIH): Public Housing Modernization Projects inadequately administered by Public Housing Authorities.	PHAs funding projects without regard to their viability. Contracts improperly administered. Costs are undocumented and incurred without HUD approval. HUD revising handbook, staff training and monitoring procedures. ADDED TO HIGH RISK LIST.	A	....	....

[1] Program terminated.

DEPARTMENT OF THE INTERIOR

(In thousands of dollars)

High Risk Area	Progress to Date	Status	1991 Estimate	1992 Proposed
Bureau of Land Management (BLM): Inadequate gas and oil inspection to verify production and usage. (Current annual revenues: $385M).	BLM inspection and enforcement procedures continue to improve and new staff hired for greater on-site inspection coverage.	1	2,397	4,745
Bureau of Territorial and International Affairs: Lack of grant oversight ($325M at stake).	No Headquarters oversight of grant funds; positions to be added in 1991 and 1992. Next step: recruit and staff Headquarters financial management position in 1991.	3	130	415
Bureau of Indian Affairs (BIA): Poor management and inadequate financial systems and controls.	In 1991, BIA is establishing an Office of Audit and Evaluation to oversee high risk areas and material weaknesses and is reconciling and auditing Tribal and Individual Indian accounts. Next steps: an Interior-OMB management review team established in January 1991 will implement improvements in financial management by October 1991. Resources are provided in 1992 for financial management improvements, trust fund activities, increasing Indian oil and gas lease inspections, and audits of Indian royalty payments and revenues.	3	13,900	25,500

DEPARTMENT OF JUSTICE

(In thousands of dollars)

High Risk Area	Progress to Date	Status	1991 Estimate	1992 Proposed
Departmental debt collection system inadequate to support collection of $6.5B inventory.	Associate Deputy AG for Debt Collection appointed in December 1990 to centralize planning and oversight. Next steps: DOJ will prepare by May 1, 1991, a comprehensive plan to improve controls, resolve both referred and DOJ debts, and address the information requirements of client agencies, OMB, and Treasury (including reconciliation of debt collection cases in DOJ inventory with receivables referred by client agencies).	3	3,000	8,000

DEPARTMENT OF JUSTICE—Continued

(In thousands of dollars)

High Risk Area	Progress to Date	Status	1991 Estimate	1992 Proposed
Departmental asset forfeiture fund controls inadequate to deal with over $1B in assets.	Permanent Executive Office established in Deputy AG Office. Next steps: integrated Financial Management Information System to be established in 1992; preparing 1990 financial statement; procedures and forms to be standardized among all DOJ agencies in 1991.	2	26,600	23,141
Executive Office of the US Trustees: Inadequate oversight of private trustees by US Trustees. ($26B at stake).	Staff being trained in financial management to improve oversight. Next steps: additional staff (123 FTE) proposed in 1992 budget; new audit guidance for bankruptcies will strengthen controls in 1991.	1	2,300	6,392
Bureau of Prisons (BOP) overcrowding creates unsafe conditions.	Plan developed to increase rated capacity to 78,188 beds by 1996; funding available through 1991 has achieved 51% of goal or 39,696 beds. In 1992, construction funds will provide 3,600 beds in 1995–96, and funds for equipment will allow BOP to activate 5,783 beds in 1992. In addition, in 1991, 4,000 additional positions were provided to BOP to address overcrowding; these positions will be fully funded in 1992.	1	429,876	533,214
BOP: Not all prisons comply with fire and/or hazardous waste disposal codes.	All immediate life and health risks corrected; safety programs in place; remedial actions to be completed in 1992.	2	6,760	21,015
BOP: Inadequate staff to operate and manage prisons.	Special salary rates established for physicians, guards, and support staff; training program strengthened; national campaign underway to recruit staff. Next steps: overall goal of 1:3 staff to inmate ratio funded in 1991 and proposed in 1992.	1	62,361	139,932
Immigration and Naturalization Service (INS): Poor management controls and inadequate financial management system.	INS has been cited for significant weaknesses in financial and program management areas. The 1992 budget proposes funding to implement detailed corrective action plans to upgrade financial management system and resolve security, assets forfeiture and other program management deficiencies by 1994.	3	400	1,830
Marshal's Service (USMS): Financial management system poor; shortage of detention facilities.	USMS financial system to become part of the Department's Financial System and integrated with a District Office System in 1994. Next steps: three year funding plan initiated in 1991 to construct holding cells.	3	13,426	1,360

DEPARTMENT OF LABOR

(In thousands of dollars)

High Risk Area	Progress to Date	Status	1991 Estimate	1992 Proposed
Departmental ADP procurement concerns.	New Office of Procurement Integrity established. DELETED FROM HIGH RISK LIST.	D	....	....
Employment and Training Administration (ETA): Federal equity in real property held by State Employment Security Agencies at risk ($1B in fair market value).	Grantee Real Property tracking system designed; ETA grantees issued guidance outlining real property requirements. Lack of good tracking system permitted grantees to dispose of property without adequate compensation to DOL for its share. Next steps: tracking system to be operational in 1991.	1	720	210
Departmental financial systems inadequate.	Core accounting system installed October 1989. Next steps: travel, accounts payable, grants management and property management subsystems are being implemented in 1991.	1	3,835	1,498

DEPARTMENT OF LABOR—Continued

(In thousands of dollars)

High Risk Area	Progress to Date	Status	1991 Estimate	1992 Proposed
Job Training and Partnership Act (JTPA): Single Audit Act not effective in safeguarding JTPA Federal funds.	IG conducting audit on the adequacy of the Single Audit Act for this purpose. Next steps: IG audit report scheduled for issuance in February 1991.	2	275	296
JTPA Service Delivery Area grantees have inadequate procurement practices.	In its 1990 FMFIA report, the DOL identified the JTPA program as a high risk area, due to inappropriate procurement practices by Service Delivery Area administrative units. Problems have included: payment for inadequate performance; lack of competition in contracting; actual or apparent conflicts of interest; and inadequate contract monitoring. In 1991, OMB will work closely implementing planned corrective actions. ADDED TO HIGH RISK LIST.	A	....	....
Pension and Welfare Benefits Administration (PWBA): Oversight of pension plans inadequate.	AICPA Audit Guide completed and released. The Guide sets industry standards for enhanced audit testing, reporting, and disclosure. Next steps: 100 additional Enforcement and 33 additional Solicitor positions added in 1991; the Administration introduced legislative proposals in 1990 and will reintroduce them in 1991 to strengthen Employee Retirement Income Security Act in 1991.	1	9,962	11,129

DEPARTMENT OF STATE

(In thousands of dollars)

High Risk Area	Progress to Date	Status	1991 Estimate	1992 Proposed
Foreign Buildings Office (FBO): Rehabilitation and maintenance of real property overseas inadequate.	Two maintenance assistance centers established; facility managers program implemented. Data on post conditions and staffing needs being collected; but strategy for managing these data remains unclear. Next steps: the budget supports a $2.5 billion five-year plan that enables the Department to complete its highest priority embassy office buildings and maintain and rehabilitate existing facilities.	3	88,210	106,821
Consular Affairs: Visa processing controls inadequate; increased risk of visa fraud.	Training material and policy guidance revised and distributed; name check procedures improved at seven posts. Next steps: the budget provides $4M for implementation of the Machine Readable Visa program.	1	5,188	6,171
Departmental management of overseas security program inadequate.	Physical security improvements completed at 25 posts; new standards developed and distributed; training conducted for 300 employees. New standards must be incorporated into security handbook. Diplomatic Security Bureau must monitor post compliance with new standards.	2	230,272	242,861
Departmental ADP security vulnerabilities and operational deficiencies.	Construction of back-up site for mainframe nearing completion; improved policy and operational guidance for systems security; improved password procedures strictly enforced; revision of basic policy documents progressing. Broad ADP vulnerabilities still to be defined and addressed. Next steps: complete contingency plans for main data processing center and overseas administrative centers by July 1991.	3	10,325	21,425
Departmental accounting and financial systems do not meet core requirements.	Current transactions for 28 of 30 bureaus converted from old systems to new primary accounting system. Next steps: Convert two remaining bureaus by October 1991.	1	6,200	7,700

DEPARTMENT OF TRANSPORTATION

(In thousands of dollars)

High Risk Area	Progress to Date	Status	1991 Estimate	1992 Proposed
Departmental financial management and administrative systems non-standard, fragmented.	Core accounting system being implemented. Next steps. implementation scheduled for completion in 1992. Administrative systems scheduled for completion in 1996.	1	5,000	12,200
Urban Mass Transit Administration (UMTA): Poor grants management ($30B in active grants at stake; $3B new grants annually).	Additional staffing resources resources for grant monitoring provided in 1991 and further increases of $940,000 proposed in budget; backlog of inactive grants eliminated; disbursement practices improved. Next steps: fill new grant monitoring positions by June 1991.	2	1,060	2,000
Federal Highway Administration (FHWA): Poor practices in use of consultants by grantees.	Regulation proposed to correct problem. Next steps: publication of final rule expected in March 1991.	1	....	....
Departmental major systems acquisition procedures inadequate.	Studies conducted; operational and management control weaknesses identified. Next steps: contract policy and procedures currently being revised; in 1992, FAA will monitor specific airport construction materials for design conformance.	1	408	1,266
Maritime Administration (MarAd): Inadequate controls over disbursement of Federal funds.	Based on assessments by DOT, OIG and GAO, no material weakness exists in the funds disbursement process. However, MarAd recognizes the significance of the Operational Differential Subsidy (ODS) and Loan Guarantee Programs and the need for adequate oversight and program control to ensure material weaknesses do not develop. Next steps: further study of ODS; OMB requested action plan in 1991.	2	....	....

DEPARTMENT OF THE TREASURY

(In thousands of dollars)

High Risk Area	Progress to Date	Status	1991 Estimate	1992 Proposed
Internal Revenue Service (IRS): Accounts receivable collection strategy inadequate ($64B owed in 1990).	Formed "Vital Few" Project to focus on large dollar accounts receivable; management initiatives still in development. OMB/IRS Work Group developing further reforms. Next steps: an additional $757M to be collected with additional FTEs between 1991 and 1993. The budget proposes an additional $47.3M for collections and $450M for tax systems modernization with agreement on tax systems modernization by April 1991.	3	42,200	47,300
Customs Service: Inadequate collecting/accounting systems for revenues on imports ($19B at stake in 1990).	Primary accounting system will be replaced by 1993; enhancements being made to revenue collection system. Next step: in 1991, Customs will undergo GAO review.	2	8,925	16,244
Public Debt: Major problems in account reconciliation regarding Public Debt.	New office created to oversee implementation of new finance system. Next step: implementing new accounting and reporting system by 1992.	2	6,019	2,395
Department: Lack of systems coordination.	Previously, there existed a problem with overall coordination of the bureau's financial systems oversight. Next steps: Bureau payroll systems will be combined at USDA National Finance Center (completion by 1993); property management systems will be integrated; off-the-shelf AMS software being used.	2	75	225

DEPARTMENT OF VETERANS AFFAIRS

(In thousands of dollars)

High Risk Area	Progress to Date	Status	1991 Estimate	1992 Proposed
Veterans Benefits Administration (VBA): Compensation and pension benefit overpayments ($182M in overpayments annually).	Legislation passed that will enable matching of DVA income records with IRS. Next step: negotiate memorandum of understanding with IRS and SSA on exchange of data by April 1991.	1	7,759	6,857
Departmental audit followup systems inadequate.	Decentralized, manually maintained audit followup system converted to a centralized, automated system. Next steps: validate implementation of corrective action by June 1991.	1	1,400	9,200
Veterans Health Services and Research Administration (VHS&RA): Drug inventory controls inadequate.	75% of VA hospitals converted from ward stock to unit dose distribution system. Next steps: additional 6% conversion as planned for 1991.	1	6,256	12,870
VHS&RA: Health care facilities construction planning process weak ($153M in 1988 and 1989).	IG audits indicate a need for strategic planning. For example, the planning process should incorporate recent demographic information and analysis of various cost proposals. Next steps: DVA will develop by April 1991, a strategy for implementing cost containment measures that also identifies critically needed improvements at existing medical centers.	3	....	....
Departmental internal controls program weak.	Senior Management Review Council established to oversee and review the internal control process. FMFIA implementation has improved. Next step: implement Department Management Control Tracking System by June 1991.	1	25	26
Loan Guaranty Program: Lack of system for assessing credit risk exposure ($150B in guaranteed loans outstanding).	Little progress has been made, although VA is now considering a corrective action plan. This plan should include a Credit Early Warning initiative based on a housing loan default prediction model. Next steps: DVA will adopt a housing loan default model by June 1991.	3	....	367
VHS&RA: Physician employment screening inadequate.	Detailed operating instructions issued and accountability established at the Medical Center director level. Next step: validate implementation of corrective action by June 1991.	1	119	119

ENVIRONMENTAL PROTECTION AGENCY

(In thousands of dollars)

High Risk Area	Progress to Date	Status	1991 Estimate	1992 Proposed
Agency enforcement oversight inadequate.	Revised policy directives issued. Next steps: 1991 funding provided to link enforcement and compliance data bases in order to better target violators; projected completion in 1991.	1	150	0
Agency financial system produces unreliable data.	Converting to new core financial accounting system; core system components operational in 1989. Next steps: correction of data integrity problems, additional system components, financial and management reporting, and enhancements scheduled for completion by end of 1993.	2	4,105	5,246
Superfund: Program lacks goals and management controls.	EPA enforcement oversight has led to nearly 60% of hazardous site cleanups being undertaken by violators in 1990. Next steps: 1991 funding continues enforcement emphasis on requiring violators to pay for cleanup activities. 1992 funding will provide increases of $16 million to continue enforcement efforts and $143 million for the new Administration priority to eliminate the backlog of sites ready for cleanup financed by the Federal fund.	1	124,000	159,000

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

(In thousands of dollars)

High Risk Area	Progress to Date	Status	1991 Estimate	1992 Proposed
Administration audit followup weak.	New audit followup official named and new tracking system implemented. DELETED FROM HIGH RISK LIST.	D	....	....
Administration financial systems integration needed.	Development of integrated personnel/payroll system (PPS) to replace 13 existing systems on schedule; operational by 1992. The NASA Accounting and Financial Information System (NAFIS), an integrated accounting system, is completing its functional requirements phase; it will be operational in 1996. Next steps: PPS installed at all sites by September 1991; NAFIS design will be completed by October 1992.	1	6,768	7,905
Administration oversight of contractors and subcontractors inadequate ($11B at stake annually; 88% of NASA budget).	New branch created within HQ; root cause of problem determined to be staff shortages at HQ and Centers. Next steps: 1991 and 1992 funding provides increased contract administration function.	2	10,187	14,401

AGENCY FOR INTERNATIONAL DEVELOPMENT

(In thousands of dollars)

High Risk Area	Progress to Date	Status	1991 Estimate	1992 Proposed
Agency financial management systems and operations inadequate.	Design of new primary accounting system will be completed in 1992; operational by 1995. Next steps: a system will be selected by November 1991.	2	2,000	3,495
Agency audit coverage at overseas missions inadequate.	Since identification of problem in 1989, IG staffing increased from 193 to 240 FTE; new floor is 251 FTE for 1991. The 1992 budget proposes funding at current services level presently mandated by Congress. Next steps: survey all missions and offices on compliance with policy concerning use of non-Federal auditors by June 1991.	2	2,549	2,549
Agency ADP security vulnerabilities.	Backup for mainframe being established; awareness program for users, including better password management, developed. Next steps: test interim disaster recovery service for three most critical systems in 1991.	2	350	1,346
AID-managed funds accountability inadequate.	Separate budget offices for program and S&E resources brought under single manager. Next steps: several management reviews underway are intended to recommend organizational improvements that will reduce duplication and free human resources.	2	....	1,143

COMMISSION ON CIVIL RIGHTS

(In thousands of dollars)

High Risk Area	Progress to Date	Status	1991 Estimate	1992 Proposed
Poor management practices in hiring, travel management and recordkeeping.	New policies and procedures issued; hiring limitation on consultants and temporary appointees imposed. DELETED FROM HIGH RISK LIST.	D	....	....

pages tightly bound

EXECUTIVE OFFICE OF THE PRESIDENT

(In thousands of dollars)

High Risk Area	Progress to Date	Status	1991 Estimate	1992 Proposed
Comprehensive internal control program needs to be established for uniformity and standardization of reporting.	The Chief of Staff to the President endorsed a revised program developed for the Executive Office of the President (EOP) in July 1990. The new program includes all EOP activities and accounts and requires each agency to appoint a senior-level official to serve as Internal Control Coordinator. DELETED FROM HIGH RISK LIST.	D	....	....
Internal audit coverage	In 1990, General Accounting Office (GAO) completed the first expanded audit report of EOP agencies. GAO reports are being conducted more frequently and are now broader in scope. The audit also included assessments of internal controls. DELETED FROM HIGH RISK LIST.	D	....	....

FARM CREDIT ADMINISTRATION

(In thousands of dollars)

High Risk Area	Progress to Date	Status	1991 Estimate	1992 Proposed
Poor accounting systems	New on-line system implemented; subsystem work still needed. Next step: install property management system in 1991.	2	250	205

FEDERAL EMERGENCY MANAGEMENT AGENCY

(In thousands of dollars)

High Risk Area	Progress to Date	Status	1991 Estimate	1992 Proposed
Internal control program inadequately implemented.	Good plan for implementing program (strong emphasis on regional operations developed). Comprehensive risk assessments on all programs completed in 1990. Next steps: internal control reviews scheduled for 1991.	2	250	250
Financial management systems inadequate.	Installation of new core accounting system (incorporating the Standard General Ledger) in progress. Completion estimated by 1992.	2	750	630

GENERAL SERVICES ADMINISTRATION

(In thousands of dollars)

High Risk Area	Progress to Date	Status	1991 Estimate	1992 Proposed
Major internal control weaknesses not being reported.	Management Control Oversight Council established; extensive training of managers completed. Next steps: procurement management control systems to be reviewed in 1991, in particular GSA's multiple awards schedule program.	2	107	....
Major systems development project failed due to inadequate oversight by Public Building Service (PBS).	New PBS management structure is providing a more integrated design, as well as better system life cycle management and contract administration. Next steps: PBS will issue solicitation for information system in 1991; award contract in 1992; system operational in 1994.	2	2,500	9,400

NATIONAL CREDIT UNION ADMINISTRATION

(In thousands of dollars)

High Risk Area	Progress to Date	Status	1991 Estimate	1992 Proposed
Centralized asset liquidation center needs effective internal controls.	Asset disposition and liquidation activities combined into a single unit in Austin, Texas to improve management controls. Next steps: annual audit by independent CPA firm; collection activity to be monitored monthly; OIG audit plan will focus on the Center.	1	300	50
Deficiencies in internal control process.	Managers charged to develop mission statements that encompass quality and cost factors and assess inherent risks. Next steps: validate that control techniques are documented and in place.	1	50	20

NATIONAL LABOR RELATIONS BOARD

(In thousands of dollars)

High Risk Area	Progress to Date	Status	1991 Estimate	1992 Proposed
Poor accounting system.	New accounting system operational October 1990. Next steps: automated interface for payroll/personnel system and procurement system planned in 1991.	1	123	130
Inventory system not reconcilable.	New inventory system completed; physical verification between headquarters and field offices coordinated. Next steps: reconcile HQ and field office records in 1991.	1	25	25
Policy for payment of employer backpay improper.	New policy on escrow accounts issued and compliance verified by General Counsel in 1990. DELETED FROM HIGH RISK LIST.	D	....	....

PEACE CORPS

(In thousands of dollars)

High Risk Area	Progress to Date	Status	1991 Estimate	1992 Proposed
System for reviewing controls at overseas posts not implemented.	Management control surveys distributed to posts; training for new administrative officers designed; IG report on trends in management problems issued. Next steps: analyze survey results; design action plan to improve overseas controls by March 1991.	2	154	160
Financial management systems antiquated.	System development effort started; recent IG audit underscored existing problems. Planning process to implement new primary accounting system must be kept on track. Next steps: select vendor, issue contract by June 1991.	2	641	350

PENSION BENEFIT GUARANTY CORPORATION

(In thousands of dollars)

High Risk Area	Progress to Date	Status	1991 Estimate	1992 Proposed
Poor coordination of information on pension plans (underfunding estimated at $20 to $30B).	Effective coordination and exchange of information on financial integrity of insurance plans now exists among PBGC, PWBA and IRS. Exposure study completed, listing 50 plans with the largest underfunding. Next step: PBGC will propose regulation to strengthen oversight of pension plans.	1	....	2,125

PENSION BENEFIT GUARANTY CORPORATION—Continued

(In thousands of dollars)

High Risk Area	Progress to Date	Status	1991 Estimate	1992 Proposed
Lack of procurement policy and procedures.	Four major procurement policy directives issued. DELETED FROM HIGH RISK LIST.	D	....	....

RAILROAD RETIREMENT BOARD

(In thousands of dollars)

High Risk Area	Progress to Date	Status	1991 Estimate	1992 Proposed
Inadequate management controls and inability to certify the adequacy of controls for the Board's biggest benefit program.	1989 FMFIA report and IG reports identified numerous weaknesses in Board operations and programs. In April 1990, OMB led a management review of RRB resulting in 42 findings and 104 corrective actions. Next steps: RRB and OMB negotiating a $13,910,000 5-year "contract" to commit the resources and complete the actions necessary to correct past problems. The plan links specific reductions in backlogs and other problems with specific resource commitments for staffing and other funding.	2	....	14,000

SECURITIES AND EXCHANGE COMMISSION

(In thousands of dollars)

High Risk Area	Progress to Date	Status	1991 Estimate	1992 Proposed
ADP systems development projects mismanaged ($11.3M at stake).	ADP Contract Administrator hired; administrative guidelines being issued. Problem area: OIRA concern as to how office automation systems will map into EDGAR public filing system. Additional reviews underway. Next step: prepare plan to implement recent legislation by June 1991.	1	700	600
No long term disaster recovery plan for computer operations.	Risk assessment underway which will lead to improvement in electronic public filing system (EDGAR). Next steps: select disaster recovery plan and implement by October 1991.	2	700	1,100
Undue delays in EEO complaint resolution.	EEO staff assigned; permanent EEO Director appointed; instituted new procedures. DELETED FROM HIGH RISK LIST.	D	....	....

SMALL BUSINESS ADMINISTRATION

(In thousands of dollars)

High Risk Area	Progress to Date	Status	1991 Estimate	1992 Proposed
Small Business Investment Company (SBIC) management/liquidation activities inadequately supervised ($1.7B at stake).	Liquidation office doubled in size (from 5 to 10). 90-day licensing moratorium until regulatory changes were completed. Financial review will be conducted of SBIC portfolio in 1991. Next steps: engagement of a financial advisor to assist in a review of SBIC financial soundness and risk assessment; review to be completed by April 1991.	3	540	2,000
Small Business Development Centers (SBDCs) lack control over program income.	Administrative steps being taken to correct problem, but SBA has been hampered by Congressional prohibition on regulatory changes. Recent audits, however, not negative. Next step: joint OMB/SBA review to confirm that remedies are in place and working by March 1991.	1	450	720

U.S. INFORMATION AGENCY

(In thousands of dollars)

High Risk Area	Progress to Date	Status	1991 Estimate	1992 Proposed
Financial management systems and operations inadequate.	Drafts of five-year systems plan and IRM management policies completed. 1989 and 1990 FMFIA reports claimed correcting financial management problems is USIA's top priority, yet little recent progress made. The budget provides an additional $820,000 to accelerate correction. Next steps: by October 1991, finalize five-year plan and prioritize systems to be reviewed; complete major software upgrades to provide better data on obligated and unobligated balances.	3	40	820

UNITED STATES SOLDIERS AND AIRMEN'S HOME

(In thousands of dollars)

High Risk Area	Progress to Date	Status	1991 Estimate	1992 Proposed
Financial management controls weak (particularly accounting and contract functions).	DOD IG audit confirmed poor accounting and internal controls; new guidance issued on contract administration; improved reconciliation with Treasury financial data. Next steps: 1991 and 1992 funding provided for conversion costs, equipment needs and training to implement a cross-servicing arrangement for financial accounting with another Federal agency; implementation in 1992.	2	859	1,626

IX.B. IMPROVING RETURNS ON INVESTMENT

This budget reflects a set of choices on relative program priorities and funding needs. These choices are based on policy decisions and various types of analysis and studies. Choices are often made using the information that is available—information that too often is incomplete or dated.

Rigorous program evaluations are rarely done, and those that are done may not be properly used. There is a dearth of good data on many of the conditions and problems that Federal programs are intended to address. Data series and indices are irregular, estimates can vary widely, projections sometimes conflict, and consequences often cannot be predicted reliably.

This chapter of the budget (1) discusses the history and state of program evaluation, notes evaluations used in formulating the budget, and sets out an evaluation agenda for 1992 and beyond; and (2) sets out significant discretionary program terminations, decreases, and increases in the budget.

EVALUATION

Evaluations of program results and performance should become an important (but not always prerequisite) factor in deciding program funding levels under the new spending caps.

By looking at whether programs are working and why, evaluations are also a valuable management tool. They allow sound judgments to be formed on funding allocations and policy issues. Resources can be shifted from programs that are ineffective to those that work.

DEFINITION

Program evaluation is a formal assessment, through objective measurement and systematic analysis, of the manner and extent that Federal programs (or their components) achieve intended objectives. Program evaluation complements long-range program planning; oversight, monitoring, and analysis of program performance and progress; and management analyses and audits that examine program administration.

Several elements are critical to successful evaluation. First, the objectives must be sufficiently defined to allow assessment of whether they are being met. Second, there must be a properly structured study design and methodology. Third, adequate data must exist and be available, so that the requisite level of independent analysis can be done and the program impacts gauged objectively.

HISTORY AND CURRENT STATE OF EVALUATION

Program Budgeting or PPBS (Planning-Programming-Budgeting System) was installed in various agencies in 1965; the emphasis was on the analysis of alternatives to achieve specified objectives. In theory, PPBS forced analysis; the options had to be identified, compared, and ranked for effectiveness. Policy analysis groups were set up in most of the Departments and agencies, and several thousand staff were engaged in system and cost-benefit analyses of alternative means of delivering program objectives.

But PPBS essentially failed, except in the Department of Defense where sufficient expertise, management practice and data existed to initiate and maintain PPBS. Elsewhere, PPBS often fell victim to "mindless quantification" without causal analysis. The result was that agency heads were often oversupplied with numbers and undersupplied with analysis of the impact of Government actions. So, while agencies collected prodigious amounts of meaningless data under vague program structure categories, actual budget decisions continued to be made in terms of the old budget categories.

Despite the use of analytic studies to improve program planning under PPBS, the Government did not systematically measure the effectiveness of existing programs. To address this need, many Federal agencies (such as the Department of Health, Education and Welfare and the Office of Economic Opportunity) began in the late 1960's, on a more selective basis, to design, fund and use rigorous assessments of the costs and effects of major programs.

By the mid to late 1970s, however, program evaluation had developed a frayed and somewhat academic reputation. Policymakers often found it irrelevant to their needs—too slow, too inconclusive, too cumbersome. Further, in the mid-1970s, some evaluation units were displaced when Inspectors General were created with broad oversight authority which often included performance auditing for economy, efficiency and effectiveness.

In the 1980's, funding cutbacks and program re-structuring (e.g., block grants) led to further reductions in agency evaluation staffs and cuts in the resources that funded outside evaluations.

Agencies are now performing relatively few outcome-oriented program evaluations; they are also producing significantly fewer evaluations with strong, data-supported information about program results. The remaining analytic products tend to involve program compliance (fraud & waste) management studies, which, while important, fail to provide reliable measures of program effectiveness.

PROGRAM EVALUATIONS USED IN THE 1992 BUDGET

The Budget Enforcement Act of 1990 (BEA) sets limits for total spending on discretionary programs (domestic, defense, and international) and enforces a "pay-as-you-go" rule for mandatory programs and revenue changes. Budget caps make it even more critical to plan for and conduct rigorous evaluations of programs, so that decisions to improve returns on investment can be more systematically based. The taxpayers deserve this much from their Government.

The budget proposes a number of programs for significant reductions or increases in funding (including programs proposed for termination). Each of these programs was analyzed in terms of its need and effectiveness, but only a few were affected by systematic program evaluations.

Examples of programs where funding decisions are based on evaluation can be found elsewhere in the budget, particularly in Chapters IV.B. ("Focusing on Prevention and the Next Generation"), V.B. ("Ending the Scourge of Drugs and Crime"), and VI.A. ("Encouraging Experimentation").

The six examples of evaluation that follow are illustrative of those that did support decisions for proposed program reductions or increases.

DEPARTMENT OF AGRICULTURE (USDA)

Special Supplemental Food Program for Women, Infants, and Children (WIC)

WIC's ($2.4 billion in 1991; $2.6 billion in 1992) prenatal component provides food supplements, nutrition education, and health-care and social service referrals to low-income pregnant women. A 1990 evaluation indicated that each dollar spent on pregnant women and newborns in WIC saved between $1.77 and $3.11 in Medicaid costs over the first 60 days of an infant's life. The analysis compared Medicaid costs and birth outcomes of WIC participants with a comparison group, using multiple regression analysis to control for the measured differences between WIC participants and nonparticipants. The study provided estimates of the effects of the WIC program that are independent of other measured characteristics that might also save Medicaid costs for mothers and newborns. The results clearly showed that WIC participation leads to healthier children and thus Medicaid savings. In 1991, nearly 4.7 million people will participate in WIC, including about 75 percent of eligible pregnant women and nearly 100 percent of eligible infants. The budget would increase WIC in 1992 by $223 million over 1991 enacted levels, targeting the increase at the 10 percent of eligible pregnant women not participating and at non-participating eligible children aged 1 and 2.

DEPARTMENT OF COMMERCE

2000 Decennial Census

A Commerce Inspector General study analyzed the 1990 Census to assess whether certain Decennial Census operations could be reduced or automated in the 2000 Census. The budget proposes $10.1 million (an increase of $8.4 million over the 1991 enacted amount) to enhance preparation for Census 2000. The money will implement the IG recommendations by funding five to six studies to develop alternative approaches for conducting Census 2000. The purpose is to ensure the most effective funding and best possible management of the 2000 Census.

DEPARTMENT OF EDUCATION

Pell Grants

The Pell Grant program ($5.4 billion in 1991; $5.8 billion in 1992) provides need-based grants for undergraduate postsecondary education. Awards are based on the relationship between an assessment of a student's and family's ability to pay (the "expected contribution") and the school's cost of education. Non-governmental studies conducted in 1988 and 1989 have shown that grant aid has the largest effect on the enrollment behavior of students from low-income families, and that when comparing different forms of financial aid, grants and the grant and loan combination have a greater positive effect on persistence in higher education than do loans. A forthcoming Department of Education study shows that low-income persons are indeed sensitive to increases in college costs. Nevertheless, as another study shows, Congress has shifted the focus of Pell grants away from students from low income backgrounds toward students from more middle income backgrounds. These studies support budget proposals to shift grant-aid back to the lowest-income students and to increase significantly the grant aid available by increasing the maximum grant.

DEPARTMENT OF HEALTH AND HUMAN SERVICES (HHS)

Foster Care

Foster Care ($765 million in administrative costs in 1991; $740 million in 1992) reimburses States at the Medicaid match rate for their maintenance payments on behalf of children in foster care eligible for Federal aid to families with dependent children (AFDC). HHS's Office of the Inspector General conducted four reviews between August 1987 and January 1990 involving claims for administrative cost reimbursements, State accounting systems, and the adequacy of HHS program administration and oversight. In the most recent and comprehensive review using nationwide statistical data, the IG identified five States for detailed study. The selection was based on significant increases in the ratio of administrative costs to maintenance payments and lack of timely access to records.

The study concluded that many States do not have adequate accounting systems to validate administrative cost claims, and that by 1993 administrative and training costs could represent over 50 percent of Federal foster care expenditures. The study's conclusions and recommendations played a significant role in developing the budget's proposals to strengthen HHS program oversight and seek administrative reforms for integrity and efficiency. Proposed legislative reforms link administrative payments to low-income (AFDC-eligible) children in foster care. In addition, contingent upon enactment of such legislation, the budget proposes a funding increase for child welfare services and research. The increase would fund: (a) critical evaluations of intensive, home-based family preservation services; and (b) pilot projects of State "Child Advocate General" offices to monitor State-wide placement trends.

DEPARTMENT OF LABOR (DOL)

Employment Service (ES)

The ES ($936 million in 1991; $878.5 million in 1992) is a joint Federal-State program created to match employers and jobseekers through a network of about 1,700 State ES local offices. In 1990, the General Accounting Office (GAO) reported a study of data from 47 States on the percentage of ES registrants placed in jobs, the percentage of such placements lasting over 150 days, and the average placement wage compared to the average community wage. GAO found that the success of local office placements related to State management practices. Successful placement occurred when States set measurable goals and provided performance incentives (including extensive interaction with the Job Training Partnership Act program.) DOL will give more attention to improving ES management and to working with the States to develop ES performance measures and goals. The reduced 1992 level reflects the need for reappraisal pending improvements in State management practices.

Title III of the Job Training Partnership Act—Economic Dislocation and Worker Adjustment Assistance (EDWAA)

EDWAA ($527 million in 1991; $527 million in 1992) provides comprehensive training and related services (including job search and relocation assistance, training vouchers, needs-related payments, and rapid response services) to dislocated workers. Evaluations of two dislocated worker demonstration programs found low participation of eligible displaced workers, concluding that "only a minority of dislocated workers can be expected to participate" in the program. The studies used rigorous sample design, establishing participant and control groups, and econometric models were employed to determine the net impact on employment and earnings. The budget takes into consideration such participation rates and requests funding for EDWAA at the 1991 enacted level.

FUTURE EVALUATIONS

The Administration supports a systematic and sustained investment in more rigorous evaluation—as an aid to both the Executive Branch and Congress in planning, monitoring, and assessing program results, and in determining future program needs. Evaluations include short-term and long-term efforts, comprehensive longitudinal outcome studies, and assessments of demonstrations or pilots.

There follow descriptions of priority evaluations for 1993 budget formulation and post-1993 budget formulation. The budget includes $35 million in 1992 for those evaluations for which cost estimates are available.

EVALUATIONS FOR USE IN FORMULATING THE 1993 BUDGET

Department of Agriculture (USDA)

Federal Crop Insurance Program.—The Federal Crop Insurance Corporation provides crop insurance to farmers for protection against losses from adverse climate or weather conditions, fire, plant disease, insect and animal damage (over $10 billion in protection currently outstanding). In recent years, indemnity payments have significantly exceeded premium income by several hundred million dollars. A premium subsidy is authorized. Alternatively, the Commodity Credit Corporation (CCC) has provided ad hoc disaster relief on a retrospective basis, allowing farmers to decline insurance coverage. The CCC's future ability to provide relief will now be constrained by the provisions of the Omnibus Budget Reconciliation Act of 1990. An evaluation will be undertaken of the effectiveness of the crop insurance program, including an assessment of why farmers choose not to be insured. (Cost $300,000)

Department of Defense (DOD)

Force Mobility.—DOD will evaluate the effectiveness of defense mobilization (particularly transportation of equipment and supplies) for Desert Shield and Desert Storm. The results will be available in 1991 to support future mobilization planning.

Department of Energy (DOE)

Environmental Restoration and Waste Management Program.—DOE's Environmental Restoration and Waste Management program is increasing rapidly. The Administration is proposing $4.2 billion for Environmental Restoration and Waste Management, a 30 percent increase over 1991 appropriated levels. In addition, to support DOE accelerated cleanup program, the Administration is proposing a $340 million supplemental appropriation for 1991. As part of the effort to manage efficiently this rapidly growing program, DOE is being asked to commission an independent evaluation of the Department's priority-setting system and project tracking system. This evaluation will assist the agency in developing a priority-setting methodology based on consideration of the risk to public health, safety, and the environment, and cost-effectiveness. The evaluation will also assist in developing an effective performance tracking system, thereby making it possible to assess program performance and measure progress toward achieving stated program objectives. The evaluation will be performed in conjunction with the Risk Management Budgeting initiative.

Fossil Energy R&D.—The DOE Fossil Energy R&D Program has funded almost $5 billion in applied R&D over the past 11 years ($459 million in 1991). The program supports research in cleaning sulfur from coal and its combustion flue gases, advanced combustion technologies, coal-derived gases and synthetic fuels, and fuel cells. There is little evidence of industry commercialization of DOE research and demonstrations. The Department will examine the effectiveness of previous R&D spending in this area and assess the program's future cost-effectiveness.

Department of Labor (DOL)

Cost Effectiveness of Occupational Safety and Health Administration (OSHA) Regulations.—OSHA regulations affect every industry and employer nationwide. OSHA's goal is to improve worker safety and health programs. OSHA estimates the cost of final rules within the last four years to be $16.9 billion. DOL commissioned three studies in 1990 to look at how well OSHA regulations actually protect workers from harm. The studies covered OSHA regulations governing (1) medical surveillance, (2) exposure to lead, and (3) training. All studies are retrospective in nature and will use workplace field studies to varying degrees. The medical surveillance and lead studies will be finished prior to 1992 and the training study will be finished by mid 1992. (Cost $2.7 million)

OSHA Regulation of the U.S. Construction Industry.—Construction fatality and injury rates have not declined appreciably since 1970, notwithstanding OSHA's promulgation of detailed and extensive safety requirements since that year. DOL will evaluate the effectiveness of OSHA's regulatory and enforcement programs through retrospective looks at fatality and injury reports and site investigations. These studies will take approximately one year to complete.

Federal Emergency Management Agency (FEMA)

Emergency Preparedness Programs.—$310 million in 1991 (or half of FEMA's budget) is civil-defense related. FEMA is reviewing its civil defense program to determine whether the program is relevant to today's international environment. The study will review the assumptions underlying the current program and recommend changes to reflect the current spectrum of threats. The findings of the study will be reported to the National Security Council within the next six months.

General Services Administration (GSA)

Federal Motor Vehicle Fleet.—GSA is denying any further agency requests to consolidate motor vehicle fleets into GSA's Interagency Fleet Management System (IFMS) pending completion and review of a study of alternative methods of meeting Federal motor vehicle fleet needs. The IFMS will cost the Government $500 million in 1991. The outcome of this study will determine the future role and growth of the IFMS and whether the private sector is a viable provider of motor vehicle fleet services to the Federal Government.

Office of Personnel Management (OPM)

Retirement Services.—Retirement benefits ($31 billion in 1990) are paid to two and a quarter million retired Federal employees or their survivors. OPM is continuing an evaluation of the Government's performance in providing these benefits in an accurate and timely manner.

POST-1993 BUDGET FORMULATION EVALUATIONS

Department of Education (Ed)

Adult Education Act Basic Grants.—Ed spent $193 million in 1990 on this program which is directed at improving basic literacy skills of adults. Over 3 million adults participate. Ed began an evaluation of the program in August 1990, relating participation in adult education programs to employment outcomes. The study will be completed in the spring of 1994. (Cost $3.5 million)

Compensatory Education (Chapter 1).—The Chapter 1 program is a formula grant program to local education agencies to assist educationally disadvantaged students. The program spent $4.8 billion in 1990. An evaluation of Chapter 1 is mandated by law, and will consist of a six year longitudinal study of the impact of Chapter 1 programs on student and school participation. The first contract for this evaluation was begun in 1989. An interim report is due in 1993; the final report in 1997.

School Dropout Demonstration Program (Title VI).—The Title VI Program spent $20 million in 1991. Ed has commissioned evaluations of the effectiveness of projects funded in 1991 to prevent dropouts. These evaluations, primarily of demonstration projects, will be completed in 1995 (Cost $1.5–2.0 million per year).

Special Education.—This program funds grants to States to identify, protect, and educate children with disabilities. Ed spent $2.2 billion in this area in 1990. A two-stage longitudinal study is underway to examine educational outcomes resulting from the program. The first stage, not an evaluation, is a survey of the characteristics of disabled youth; this stage is complete. The second stage—an evaluation of post-education outcomes and variables affecting outcomes—is to be completed in 1992. (Cost $6.4 million)

Vocational Rehabilitation Basic State Grant Program.—This program, initiated in 1920, is intended to help prepare mentally and physically disabled individuals for gainful employment. Ed spent $1.5 billion on this program in 1990. There have been no recent studies of the program's impacts, particularly the effects of the 1973 amendments that assigned priority to assisting individuals with severe disabilities. (Cost $2 million to design and begin implementation)

Department of Health and Human Services (HHS)

JOBS (Job Opportunities and Basic Skills) Program.—This entitlement program replaced the Work Incentives (WIN) program as a result of the Family Support Act of 1988; the budget proposes $1 billion at the full authorization level. The Congressional Budget Office (CBO) has estimated that 20,000—1 percent of recipients—will leave welfare as a result of JOBS each year and that the cost for each additional family leaving welfare is $40,000. HHS, however, does not have estimates as to the number of mothers who get jobs as a result of JOBS. HHS will undertake an evaluation of the program for delivery in 2 to 3 years.

Head Start.—The budget includes over $2 billion for Head Start, a 5 percent or $100 million increase over 1991. This funding level continues the policy of increasing the number of low-income children and their families receiving comprehensive, developmental services, screening, and immunization; and nutritional and social services. The budget targets resources for enhanced Head Start evaluations, research, and demonstrations. While there is evidence to show that Head Start children experience substantial immediate gains in cognitive growth, school readiness, and achievement, less is known about the effect of the wide range of Head Start services. The results from these studies will be available over the next 3 to 4 years. (Cost $8.5 million)

Department of Housing and Urban Development (HUD)

Lead Paint Abatement and Risk to Children.—Complete lead abatement in America's housing stock is estimated to cost $500 billion. The effectiveness of lead abatement programs (i.e., reducing lead levels in children's blood) has not been well evaluated. Some existing studies show lead removal is as dangerous to children in the short term as leaving the lead where it is, and may not be beneficial in the long term. HUD will undertake further evaluations of the effectiveness of State and local programs through pre- and post-sceening analyses, with results expected in 3 to 4 years.

Department of Labor (DOL)

Effectiveness of Workplace Drug Testing and Employee Assistance Programs.—Anti-drug programs, including drug testing and employee assistance, are proliferating in the private workplace. Many of these programs, which cost private and State and local government employers on the order of $500 million annually, respond to Federal requirements or exhortation. But, since the effectiveness of these programs is largely unknown, DOL will commission evaluations to ascertain which programs are successful and what the elements of success are. Results are expected in 1995.

Effectivenss of OSHA Regulations.—The Department hopes to build on the evaluation that will be completed in 1991 by initiating additional studies to examine how well protection methods actually work in the workplace.

Small Business Administration (SBA)

Effectiveness of SBA Credit Programs.—SBA currently has outstanding loans and guarantees totaling about $18 billion and spent $175 million in 1990 in administering these programs. SBA will begin an evaluation in 1991 to analyze the degree to which small businesses are uniquely helped by SBA credit programs. Results are expected in several years.

Multi-Agency

Public Land Management Policy.—This study entails the first comprehensive review of public land management principles and practices in nearly 20 years. The evaluation aspects of the study include (i) an inventory and (ii) an assessment of existing and potential uses of all lands held in the Federal inventory to ensure that lands are being used most efficiently and to their best potential. Agencies participating in the study include the Departments of Agriculture, Commerce, Defense, Energy, and Interior, the Environmental Protection Agency, and the General Services Administration. (Cost approximately $2 million)

SUMMARY OF TERMINATIONS, REDUCTIONS, AND INCREASES

The Budget Enforcement Act of 1990 (BEA), part of the budget agreement reached last fall, set limits for total spending on discretionary programs for each of the next four years. The budget requests $522.7 billion in budget authority for discretionary programs, a level consistent with the BEA limits. This includes $197.4 billion for domestic programs and $291.4 for defense programs. This level of spending requires restraint in numerous programs in order to fund high priority discretionary programs. Under the BEA requirements, limited funds must be spent where they are most needed. Significant increases for health research, education, environmental protection, drug prevention and treatment, and law enforcement, for example, could not be made if other programs are not restrained.

TERMINATION OF SUBSTANDARD PROJECTS

Many projects funded by the Congress do not meet established programmatic standards established by Congress itself in authorizing statutes or by published agency regulations. These substandard projects are commonly referred to as "pork" or "pork-barrel" projects. Standards most commonly violated are:

- Requirements to use competitive procedures in making grants and awarding contracts are waived in order to fund legislatively designated projects.
- Requirements to fund only projects of national or regional importance are disregarded in order to fund projects of purely local interest.
- Requirements that design work for construction projects be significantly underway (35–50 percent completed) to ensure that funded projects can be executed on time and within authorized funding levels are disregarded.

In this section, examples of such substandard projects, for which $574 million in budget authority was provided in 1991, are identified. The budget proposes to eliminate new funding for such projects in 1992. (A broader definition of "pork" would add about $2 billion to this total. This definition would allow inclusion of projects that technically do not violate legislative or regulatory standards—in many cases because there are none—but most of which are funded only to provide for very narrow interests with little or no national benefit.) The types of substandard projects that are included in this discussion are summarized in Table B–1.

Department of Commerce

National Oceanic and Atmospheric Administraton (NOAA).—The budget requests no funding for 6 NOAA programs, totaling $6 million in 1991, that are direct industry subsidies, pass-throughs to State and private organizations, or State-specific projects. These programs either lack enabling legislation or fail to conform to published guidelines or regulations.

Department of Defense—Military

Military construction.—Congress has required that at least 35 percent of planning and design be completed before construction projects are funded. However, $182 million was added by Congress to the 1991 military construction program for projects that did not meet this requirement.

Research, development, test, and evaluation.—Section 220 of the National Defense Authorization Act for 1989 requires that grants or awards of contracts to colleges or universities for the performance of defense research and development, or for the construction of research facilities, be made on a competitive basis. However, a number of projects totaling $95 million were added to the appropriations acts and accompanying reports for 1991 that did not meet this standard.

Operation and maintenance.—Four projects for which there are no military requirements were added by Congress to the 1991 Budget. These totaled $16 million and included a parliament building for the Solomon Islands, grants to two museums, and the up-

grade of port facilities in the territory of American Samoa.

Department of Energy

Office of Energy Research.—The Department of Energy scientific research programs fund projects through an Objective Merit Review process in which requests for proposals are published and distributed to the scientific community. Proposed projects compete and are selected on the basis of scientific merit and applicability to program goals. However, $114 million of appropriated 1991 funds were for specific projects and activities that have not been subject to competition and have not been evaluated and selected on the basis of their scientific and technical merit or their relevance to the agency mission.

Department of Housing and Urban Development (HUD)

Special project grants.—In 1991, Congress provided $54 million for specifically-directed grants which violate the principles of open and fair distribution of HUD program resources that were adopted by the Congress in the 1989 HUD Reform Act to restore the public's faith in HUD programs. These grants were awarded directly in annual appropriations action without authorization, without any published selection criteria, and without application procedure. The budget requests no funding for such projects.

Department of Transportation

Urban Mass Transportation Administration (UMTA).—UMTA has had in place since the mid-1970s a well-documented system for developing and evaluating on their merits new fixed guideway rail and bus systems and extensions to existing systems. These projects are commonly known as "new starts". Since 1984, the process has included a rating system to help set Federal priorities among those projects that warrant funding consideration. The basic rating criteria are cost-effectiveness and local financial commitment. Notwithstanding the existing criteria, of the $440 million that was appropriated for "new starts" in 1991, $15 million was earmarked for projects without full funding agreements that did not meet UMTA's criteria.

Federal Highway Administration.—Federal highway funding is apportioned to the States. It is the State's responsibility to select which projects will receive funding. To be eligible for Federal funding, the project must be on the Federal-aid highway system. In 1991, Congress appropriated $15 million for 5 projects which were not on the Federal-aid highway system. These "demonstration projects" should be the sole responsibility of the States and are not eligible for regular Federal funding.

Conrail commuter transition assistance.—This program was originally designed to help defray the one-time start-up costs of commuter service and other transition expenses connected with the transfer of rail commuter services from Conrail to other operators (Public Law 97–35 and Public Law 97–468). Between 1986 and 1991, funds outside of the original statutory mandate have been appropriated through this program to be available to the Southeastern Pennsylvania Transportation Authority (SEPTA) for continuing rail and bridge improvements. These are local projects that should be financed through SEPTA's own funds.

Amtrak corridor improvement loans.—In 1990 and 1991, funds were provided to a private rail carrier for infrastructure improvements in Illinois. These loans have been targeted for a local rehabilitation project on a private railroad under the pretext of preserving Amtrak service over an existing route. This project is unnecessary to preserve Amtrak service (alternative routes are available), and the Federal Government should not be financing capital improvements on a private rail carrier. The budget requests no new loans. Excluding this place-specific project, existing Federal statutes would not permit Federal approval of these types of loans.

General Services Administration (GSA)

Grants to organizations.—GSA's Federal Buildings Fund was created by the Public Buildings Act of 1972 to provide for the construction, leasing, operations and maintenance of Federal buildings, while its General Management and Administration account is for the agency's overhead costs. Neither of these accounts is authorized to make grants to State and local governments or to private entities. Nonetheless, 45 grants with 1991 funding totalling $72 million have been included in these accounts by Congressional action. These grants are to universities, hospitals, museums, research institutes, and other non-governmental organizations. They are for various purposes not related to the construction, leasing, operations and maintenance of Federal buildings, ranging from establishment of research institutes at centers of higher education to inner-city community drug control programs. The research ranges from superconductivity to marine exploration to various medical research projects.

Small Business Administration

Miscellaneous grants.—For 1991, the Congress provided $6 million to SBA to fund a number of unrelated projects at various colleges and universities and at local economic development centers. These projects were provided, without authorization, in annual appropriations action. Because these projects are inconsistent with the objectives of the Small Business Act, the budget requests no funding for 1992.

Other agencies

District of Columbia's Children's National Medical Center.—The 1991 enacted level includes $3 million for the National Child Protection, Trauma, and Research Center at Children's National Medical Center. Providing a special appropriation for this private hospital rather than awarding such funds through the Department of Health and Human Services' competitive grant award process is inappropriate and outside of normal funding procedures.

OTHER PROGRAM AND PROJECT TERMINATIONS

In addition to the terminations of substandard projects, the budget requests termination of 283 other programs. Programs are proposed for termination for a variety of reasons. Some should not be Federal responsibilities since they can be more efficiently managed by either State and local governments or the private sector. Others have fulfilled their original missions and are no longer needed. Still others duplicate other more effective Federal programs or cannot be afforded within available Federal resources. Some procurement programs can be terminated because inventory requirements have been satisfied.

A discussion of the major terminations proposed in the budget follows. Terminations of defense discretionary programs are discussed first, followed by terminations of domestic discretionary programs listed by agency.

Department of Defense—Military

Acquisition programs.—Table B–2 lists programs that are being proposed for termination in this budget. Examples are: the A–12 aircraft, because of technical and cost problems, and the Trident submarine, because of changing requirements. Several other programs are proposed for termination because they can not be afforded within available resources.

These programs have been proposed for termination since submission of the 1991 Budget.

[1] All outlays are first year outlays only.

Department of Commerce

Economic Development Administration (EDA).—The Administration proposes to terminate the EDA ($216 million in 1991), funding only closeout costs in 1992. Although originally designed to aid distressed areas, EDA assistance is now available to more than 80 percent of the country. In addition, decisions on local economic investments that yield only local benefits are best made and paid for at the local level. The goals of the EDA programs can best be promoted at the Federal level through the Administration's other economic development and job creation programs.

National Oceanic and Atmospheric Administration (NOAA) subsidies and low-priority projects.—The budget does not request funding for 57 NOAA programs totaling $82 million that are direct industry subsidies, compete with private industry, are low priority State-specific projects, or are made unnecessary due to management improvements.

Public telecommunications facilities grants—The budget requests no funding to continue this program. Originally, the purpose of this program was to ensure the establishment of public TV and radio in urban and rural areas of the nation. That purpose has been accomplished in over 95 percent of the country. Currently, the program is used to subsidize the replacement of facilities and equipment at those stations already established.

Department of Education

Obsolete forms of student financial assistance.—The budget proposes no funding for two discretionary student financial assistance programs—State Student Incentive Grants and Federal Capital Contribution for Perkins loans. The former has long since achieved its goal of stimulating states to establish need-based student financial aid programs of their own. The latter provides for costly loan subsidies, which are not needed in light of the general availability of Stafford and other guaranteed student loans.

Impact aid.—No funds are proposed in the impact aid program for "b" payments for Federally connected children or for payments for decreases in Federal activity. There is no significant burden on most school districts associated with either the presence of "b" children or the closing of military bases.

Other.—The Administration proposes to terminate numerous small narrow-purpose categorical education programs that have achieved their purpose, are low priority, or whose objectives can be achieved through broader program authorities.

Department of Energy

Conservation grants.—The weatherization assistance program (WAP) provides Federal assistance through State and local organizations to increase the energy efficiency of residences. States have available to them over $3 billion in petroleum overcharge funds, which may be used for this or other energy conservation activities. This obviates the need to continue the WAP program. Moreover, currently available data indicate that the WAP program is not cost effective because the average annual energy savings is not sufficient to pay back the Federal investment within the average useful life of the housing stock.

Clean Coal Technology (CCT).—The President's goal of a $5 billion combined government/industry clean coal technology program will be achieved ahead of schedule. Because the $5 billion program goal will be reached at the end of 1991, after the 4th round of CCT solicitations, the budget proposes to transfer budget authority that was already appropriated for 1992 to the fossil research and development program.

Department of Health and Human Services

Community service block grant (CSBG).—Now that community action agencies are mature, they should not need the special administrative funding provided by this program; they should compete with other service providers on an even basis. In addition, the HHS Inspector General has found many problems in the use of discretionary grant funds. The budget does request funding for the McKinney Act program and the national youth sports grants to the National Collegiate Athletic Association (NCAA). The Administration is interested in finding a private sponsor for the NCAA program, which funds athletic camps for low-income youth.

Untargeted Health Professions Assistance Grants.—The budget does not request funding for untargeted health professions training grants, but supports targeted health professions assistance for disadvantaged students. After two decades of Federal support, the aggregate shortage of health professionals perceived in the 1960s, when these subsidies were initiated, has abated. Apart from the targeted assistance grants, funding to help students finance their training in the health professions is available through other sources, including Medicare medical education payments, health professions loans for disadvantaged students, and guaranteed and other student assistance available through the Department of Education.

Rural health outreach demonstrations.—Rural health outreach grants were funded in 1991 on a one-time basis to demonstrate the effectiveness of outreach to populations in rural areas. The budget does not propose to continue funding of these one-time grants in 1992. The budget does include funding for community and migrant health centers, which provide primary and preventive health services in rural areas and can build upon the findings of the rural health outreach demonstration grants.

Community youth activity formula grants.—Because the budget places a high priority on drug abuse prevention, the Administration proposes shifting $20 million in budget authority from the community youth activity program (CYAP), a formula grant administered by the Alcohol, Drug Abuse and Mental Health Administration (ADAMHA), to ADAHMA's better-targeted categorical grants. This reallocation provides increases over 1991 for grants that support drug abuse prevention programs for pregnant women and at-risk youth. It also provides increases for ADAMHA's community partnership program, which promotes long-term drug abuse prevention by creating a forum through which local interests can work together to implement community-wide alcohol and other drug abuse prevention and treatment initiatives. ADAMHA's targeted prevention grants are more effective in reaching at-risk populations and creating long-term prevention strategies than the CYAP formula grant.

Department of Housing and Urban Development

Public housing new construction.—The budget proposes to terminate new public housing construction, but continues to provide funding for vouchers and proposes funding for the new HOME investment partnership grants (enacted in the 1990 National Affordable Housing Act). Public housing new construction costs at least twice as much as rental assistance, whether it is in the form of rental certificates or housing vouchers. Housing vouchers expand opportunity for low income households by increasing their ability to choose where to live. In addition to this critical social benefit, vouchers also meet national housing policy objectives at substantially lower cost.

Indian housing new construction.—The Administration proposes to fund Indian housing new construction as a setaside through HOME investment partnership grants, rather than as a separate categorical program. The HOME grants provide Indian tribes greater flexibility in the use of resources (rental assistance, rehabilitation, or new construction) than the current new construction program. This setaside would fund 1,550 units of new Indian housing should tribes decide to use all of the HOME funds for new construction; a higher number would be served if the funds are used for rehabilitation and rental assistance, as opposed to exclusive reliance on new construction.

Programs repealed in the 1990 National Affordable Housing Act (NAHA).—The budget does not request funding for programs that were funded in 1991 but terminated, beginning in 1992, in the 1990 NAHA. The programs in this group include rental rehabilitation grants, Nehemiah grants, urban homesteading, and the rehabilitation loan fund. The budget also proposes to rescind the 1991 funding provided for 1991 for these programs to offset the requested supplemental for two new programs authorized in NAHA—HOPE and HOME.

Section 8 moderate single room occupancy (SRO).—The budget requests no resources for this program in 1992 but, instead, proposes funds for HUD's new SRO program that is one component of the Shelter Plus Care initiative. The new program better aids the homeless by linking supportive services with SRO-type shelter and is targeted to the seriously mentally ill, substance abusers, and those homeless with AIDS.

Congregate services.—The Administration proposes to replace congregate services with a new program. The new program would provide frail elderly with special housing vouchers subsidizing both housing and service costs. This new program emphasizes choice of independent living arrangements and is better targeted to the frail elderly than the current congregate services program.

Department of the Interior

National Park Service urban park grants.—The Administration proposes no funding for urban park grants in 1992. This program provides grants to local governments for city park rehabilitation. No funds were requested or appropriated from the mid-1980s through 1990, and local park rehabilitation should remain a non-Federal responsibility.

Rural abandoned mine program (RAMP).—The RAMP program, which addresses small-scale rural mine land reclamation projects, is administered through USDA. This duplicates existing capabilities of State reclamation programs administered through Interior. The budget request proposes $3 million for RAMP, a reduction of $9 million from the 1991 level, to close out existing projects under USDA and return the program to State control. This would eliminate unnecessary administrative costs and potential conflict in setting reclamation priorities.

* $500 thousand or less.

Navajo Rehabilitation Trust Fund.—This program funds infrastructure improvements on Navajo tribal land in Arizona and New Mexico, to be repaid when coal under land acquired by the Navajo Tribe (Paragon Ranch) is mined and sold. The budget suspends infrastructure funding, a reduction of $3 million from 1991, until coal mining plans are definite and repayment more likely.

Department of Justice

Mariel Cuban grant program.—The budget requests no funds for grants to States for the Mariel Cuban program. The program provides offsets to the cost of incarcerating Mariel Cubans convicted of State and local crimes. The Administration believes this is an inappropriate use of scarce Federal resources.

Department of Transportation

Earmarked Federal Highway Administration projects.—The budget proposes to terminate five current categories of earmarked State-specific highway project funding. The Administration has consistently opposed Congressional earmarking of funds for specific projects. This reduces the States' ability to determine which projects to fund. Such earmarking generally results in the construction of projects that are a low priority.

Northeast corridor improvement program.—This program has fulfilled its original mandate to renovate the passenger rail corridor between Washington, DC and Boston. The Northeast corridor is an integral part of the Amtrak system. New projects on the corridor to improve Amtrak service should be financed through Amtrak's regular capital program. A separate program for the corridor is no longer justified.

Local rail freight assistance grants.—The conditions prevalent in the rail industry that inspired this program no longer exist—namely, the abandonment of light density rail lines during the industry's financial crisis in the 1970s. Since the partial deregulation achieved in 1980 (Staggers Rail Act), shortline and regional railroads have become a growth industry. Moreover, 20 States have their own local rail assistance programs. Finally, a report issued by the Department of Transportation, Deferred Maintenance and Delayed Capital Improvements on Class II and Class III Railroads, found that 85 percent of the carloads reported by small railroads were accounted for by carriers with no rehabilitation needs or no needs beyond what they can cover from internally generated funds. There is no longer a need for a Federal role in preserving light density lines.

Army Corps of Engineers

Water projects and studies.—About 54 studies, maintenance activities, and construction projects that were added to the 1991 Budget by Congress at a cost of about $138 million in 1991, with much larger outyear funding requirements, are recommended for termination. The majority of these terminations involve activities that do not meet long-standing Administration criteria in that they are not Federal responsibilities, uneconomic, not cost-shared as prescribed by law, or were legislatively exempted from cost sharing.

Environmental Protection Agency

Asbestos loans and grants.—The budget requests no funding for the asbestos-in-schools loans and grants program. The program has already greatly reduced the asbestos problem and additional funding would largely go either to State and local agencies that are capable financially of addressing the remaining problem themselves or to low priority projects that do not represent a significant environmental threat. By the end of 1991, approximately $290 million in Federal funds will have been provided to over 1000 local educational agencies showing the greatest financial and environmental needs. The financial responsibility for asbestos abatement now rests with States and localities. Thirty-two States have enacted more than 60 asbestos-related laws and nearly half of the States have financing provisions in the laws.

Other terminations.—Funding is eliminated for programs and projects, many added by Congress, that: (1) provide localized benefits and are not a Federal responsibility, such as the Clean Lakes program; (2) are one-time activities, such as the purchase of EPA's Ann Arbor Lab; (3) were not competitively awarded, such as several research and training centers; and (4) do not target available resources to

[1] All outlays are first year outlays only.

address the highest environmental risks, such as the unnecessary relocation of residents at the Koppers Texarkana Superfund site.

Other Agencies

D.C. special payments.—In 1991, the Congress appropriated $85 million for special payments to the District of Columbia. Two of these payments—$20 million for new jail construction and $10 million to complete the transfer of St. Elizabeth's Hospital to the city—fulfilled the Federal commitments for those particular projects. The remaining special payments provide earmarked funds that restrain the ability of the new mayor to make critical internal changes in the D.C. budget. The 1992 budget eliminates these earmarked funds, but increases the lump sum federal payment to provide D.C. additional flexibility to meet its current budget problems.

Commission on National and Community Service.—The budget requests no funding for the Commission on National and Community Service, which was newly authorized in 1991. The President did not seek to establish this Commission and ACTION, the nation's volunteer agency, directs and funds programs similar to the programs the Commission would finance. There is no basis for financing this duplicative program. The Points of Light Foundation also will make grants to organizations (public or private) to create service opportunities.

Interstate Commerce Commission (ICC).—Consistent with previous administration proposals, the budget proposes to sunset the ICC following enactment of proposed legislation to eliminate all remaining economic regulation of the trucking industry. Residual functions would be transferred to the Departments of Transportation and Justice, and the Federal Trade Commission.

OTHER PROGRAM REDUCTIONS

The budget requests that numerous programs be funded below the level enacted for 1991. These programs are either (1) of lower priority and need to be restrained in order to fund higher priority programs, (2) can be reformed at a significant cost savings to the Federal Government while still fulfilling their purpose, or (3) can be reduced to reflect changing requirements.

Department of Defense—Military

Acquisition programs.—Table B–4 lists examples of acquisition programs for which 1992 funding is significantly lower than previously planned. These reductions reflect changes in requirements including those associated with planned force structure adjustments.

Department of Agriculture

Cooperative State Research Service special research grants and construction.—The budget will request funding for only those research grants that provide broad national benefits or directly support the Federal Government's own research needs. Appropriations for 1991 supported more than 30 small, special grants whose purpose is not closely related to national needs in basic agricultural science research. Formula funds are provided to the States to address local or regional priorities that vary with geographic conditions. Likewise, only construction that is linked to basic research needs can be funded. The budget proposes to replace the 1991 special construction grants with a competitive program that awards funds based on a facility's ability to support the priorities articulated in USDA's National Research Initiative.

Soil Conservation Service watershed and flood prevention.—Program reductions in parts of the Soil Conservation Service reflect the need to target Federal assistance to garner the maximum benefits in controlling soil erosion. In the resource conservation and development program, Federal resources will be devoted solely to technical assistance.

Animal and Plant Inspection Service predator control.—The budget proposes a reduction in the direct control activities of the agency's animal damage control program. The application of Federal resources to the extermination of predators, such as coyotes and mountain lions on Western rangelands, creates inconsistencies between species protection and pest elimination policies. A program reduction will result in better targeting of funds to the most critical needs. Technical assistance on predator control, however, will be continued.

Department of Commerce

Decennial Census—The budget proposes a reduction in funding for this program reflecting the winding down of the 1990 decennial census effort. It also includes termination of promotion and outreach activities for the 1990 decennial census. Funding would continue for product development, evaluation, and data dissemination.

Department of Education

Student financial assistance—The budget proposes to reduce two discretionary campus-based student aid programs, Work Study and Supplemental Educational Opportunity Grants. Discretionary student aid funding in the budget would be refocused on the largest program, Pell grants, which reaches the lowest income students most efficiently.

Public library services.—The budget proposes to reduce funding for grants to public libraries. Remaining funds would be targeted on the activities authorized under current law that are most directly related to achievement of the national education goals.

Department of Energy

Fossil Research and Development (R&D).—The budget requests a reduction in funding for the non-petroleum R&D areas in the fossil R&D budget. Because of the lack of private sector participation and cost sharing in these applied R&D areas and their history of limited success, R&D funds are reallocated to higher priority aeras. For example, in coal, emphasis has been placed on more efficient combustion technologies. Additional funding was also allocated to activities which have been identified in the National Energy Strategy as potentially having high returns, and where significant industry interest and cost sharing can be expected.

Department of Health and Human Services

Low-income home energy assistance (LIHEAP).—LIHEAP was enacted as a temporary program to deal with short term energy price increases. Appropriations increased in 1990 because of short-term oil price abnormalities. The price of natural gas, the heating fuel most households use, is at a long term low. Prices of petroleum-based fuels should also be low again by the beginning of 1992. Thus, the Administration proposes to reduce funding to $1.0 billion in 1992.

Interim assistance to States for legalization.—Otherwise known as state legalization impact assistance grants (SLIAG), this program was authorized and fully funded in the Immigration Reform and Control Act of 1986 to help fund expected increases in State and local costs from legalizing aliens. Actual costs have been much lower than expected. As a result, this program has effectively become a fiscal subsidy for general governmental costs in a few States. The budget proposes to rescind $1.1 billion of the funding already made available for 1992.

Indian Health Service (IHS) facilities—The 1991 IHS facilities appropriation fully funds construction for several health facilities and personnel quarters. For 1992, no additional construction funds are required. The 1992 Budget finances normal IHS maintenance and repair requirements. Unobligated balances will continue to be available for current construction projects.

[1] Part of the budget authority shown for this program, $1,115 million in 1991 and $300 million in 1992, is not counted under the discretionary cap and is not included in the totals for this table.

Department of Housing and Urban Development

Renewal of expiring Section 8 subsidy contracts.—The Administration is fully funding all expiring Section 8 housing contracts (e.g., housing vouchers and housing certificates) in 1992. The number of expiring contracts is expected to decline in 1992 and, as a result, the amount of money needed to renew these expiring contracts will also decline.

Construction of housing for the elderly and handicapped.—The budget requests to reduce this program from $1,024 million in 1991 to $367 million in 1992 because other more effective and less costly programs are available to meet the housing needs of low-income elderly and handicapped individuals. These include: (1) a new leased housing program for non-profit sponsors to serve the elderly, (2) HOME grants, especially the use of the non-profit set-aside funds, and (3) less costly housing vouchers. HUD evaluations indicate, moreover, that HUD subsidized housing programs disproportionately meet elderly needs relative to those of younger families with children.

Community development block grants (CDBG).—CDBG targets a portion of its funding to housing rehabilitation. The budget proposes to reduce CDBG funding nine percent below the 1991 enacted level. HOME, a new block grant initiative for States and localities, will provide funds for housing rehabilitation. The reduction in CDBG will be more than offset by the increase in HOME.

Public housing modernization.—Funding for the modernization of public housing to assure viable public housing units provide safe and decent housing remains an Administration priority. The 1992 proposed level of $2.3 billion represents a 18 percent increase over the average modernization funding level for 1988 through 1991. The unsustainable 1991 level of $2.6 billion has only increased the already substantial $3.6 billion backlog of available but unspent modernization funds.

Department of the Interior

National Park Service (NPS) and Fish and Wildlife Service (FWS) construction.—The budget proposes to increase funding for rehabilitation construction projects in both bureaus as part of the Interior's Legacy '99 initiative. At the same time, the Administration is not requesting additional funding for various construction projects not requested or needed by the Services but nonetheless funded in 1991. As a result, total proposed funding for NPS and FWS construction is $197 million below the 1991 level.

Bureau of Reclamation construction.—The Administration is requesting $546 million in budget authority for Reclamations's construction program in 1992, a reduction of $97 million from the 1991 enacted level. Over one-half of the decrease is attributable to the reduced funding for the Central Arizona Project, which is nearing completion. The request maintains most currently budgeted water projects on an efficient construction schedule, but proposes no major project new starts. This reflects the Administration's policy of greater emphasis on non-structural measures and more efficient operation of existing projects. The request supports increased funding for high-priority activities, including safety of dams and improvements at existing projects.

Territorial and International Affairs—The budget proposes total reductions of $56 million from 1991, primarily for construction grants. High-priority health and safety projects and operations grants would be funded. Reductions occur in areas where territories have adequate revenues to finance their own needs, such as infrastructure projects, and where funds were not requested, such as special project grants.

Abandoned mine land fund.—The Administration is requesting $117 million for the State reclamation grants program, a reduction of $33 million from the 1991 level. The recommended amount should be adequate for current reclamation needs.

Bureau of Mines research.—The budget requests $78 million for Bureau of Mines research in 1992, $25 million below the 1991 enacted level. Research that is long-term or high-risk is funded. In addition, applied research funding is provided for those activities that benefit society but would not be undertaken without Federal support. In 1991, funding was provided for many lower priority projects that the budget does not propose to continue.

Department of Justice

Juvenile justice grants.—These grants provide funds to State and local units of government, public and private agencies, organizations, and institutions to aid in the prevention, reduction, and treatment of juvenile crime and delinquency. The budget proposes to terminate the formula grant portion of the program and retain funding for discretionary grants specifically targeted to high-risk youth. The goals of the formula grant program have for the most part been achieved and States have appropriate State-funded delinquency prevention programs in place.

Regional information sharing system.—This program was designed as a pilot to test the benefits of establishing regionally based information sharing centers throughout the country to service State and local criminal justice agencies. Once established, non-Federal sources were to be sought for continuation of various regional systems. Six regional centers currently exist. The budget proposes to phase-out Federal support for these centers by requiring a 25 percent State match. This matching would be increased each year until the full burden rests on agencies receiving the principal benefits of the system.

Department of Labor

Employment service.—The employment service finances block grants to States for various types of employment assistance to job-seekers and employers ($885 million in 1991). Little information is available on the nature of services provided, on the populations served, and on the effectiveness of the program in leading to jobs. GAO has questioned the wide variations it has found in employment service performance across States. Competing priorities in 1992 suggest that scaling the program back while taking a more active role in measuring and monitoring performance will improve performance over the longer term.

Older Americans employment.—The budget requests $343 million for this program, which provides grants to States and finances contracts to subsidize part-time community service jobs for low-income elderly persons. The 1992 request is $48 million below the 1991 enacted level and roughly equal to the 1989 actual funding level. Under the requested level, no one need lose a job; advance planning would allow projects to meet lower financing levels through attrition.

Veterans employment service.—The veterans employment service provides grants to State employment service agencies for staff who assist only veterans. Staffing levels are determined by legislatively set formulas based on the number of veterans in different categories. Under current law the formula determining the number of special staff serving veterans will change and the Vietnam-era veterans will be removed from the staffing formula on December 31, 1991. In general, fewer Vietnam veterans now require the intensive employment counselling or other services that are provided by the exclusive staff.

Department of Transportation

Urban Mass Transit Administration (UMTA).—The Administration proposes to reduce mass transit funding for new starts (new fixed guideway bus and rail systems) from $440 million in 1991 to $300 million in 1992. Funding for new starts would be directed at those projects that meet UMTA's statutory cost-effectiveness and local financial commitment rating criteria. The Administration's proposal would also limit operating assistance to cities under one million in population. Consequently, operating assistance would be reduced from $802 million in 1991 to $295 million in 1992. The Administration is also proposing to distribute capital funding for rail modernization and bus systems through the regular formula grant program rather than through the current discretionary allocations.

Amtrak.—Unlike previous Administration proposals to terminate Amtrak subsidies, the budget proposes the initiation of a multi-year subsidy reform program. The proposal includes an immediate cut in Amtrak's Federal operating assistance concomitant with the implementation of reform measures identified by Amtrak management and the Department of Transportation to minimize current operating losses. The budget also provides for a capital investment program that will generate additional revenues over the longer term, further reduce operating costs, and accelerate movement toward operating self-sufficiency.

Department of Veterans Affairs

Major construction projects.—The budget proposes a new overall policy for VA's construction program that emphasizes maintaining and renovating existing physical plant through additional minor projects to prevent the need for future costly replacement hospitals. Funding will shift to constructing fewer major replacement hospitals and a larger number of general projects and minor construction projects that correct patient environment deficiencies at existing medical centers and upgrade for advances in medical technology.

Army Corps of Engineers

Continuing authorities.—The budget requests $30 million for these projects, a $28 million reduction from the 1991 enacted level. Small flood control projects (Section 205) would be continued, but activities conducted under the authority of other sections would be phased out. Most projects funded under these authorities are small enough to be implemented by non-Federal entities.

Environmental Protection Agency

Non-point source grants.—Local government land-use decisions and agricultural practices account for most non-point source pollution. It is inappropriate for the Federal government to interject itself too heavily into these traditionally local decisions. Accordingly, the Administration prefers a more deliberate approach to Federal involvement in this area, so that State and local agencies are truly assisted, and not supplanted by the Federal Government. The prime example of this cooperative approach is the President's Water Quality Initiative, under the leadership of the Department of Agriculture, which is already making substantial progress in resolving non-point source concerns with the agriculture community.

Other reductions.—Reductions are made in a variety of activities that either have completed a portion of their mission and are phasing down, such as staffing for the construction grants program, which is being replaced by State revolving funds requiring less Federal oversight, or are Superfund support activities, which are being reduced to make additional funding available for cleanup.

General Services Adminstration

Federal buildings fund—The enacted level for the Federal buildings fund includes a onetime appropriation of $1.6 billion to deal with the backlog of Federal building projects. The 1992 request can therefore be reduced. Much of the need for additional budget authority in 1992 has been offset by a $450 million increase in revenues coming in to the fund.

Small Business Administration

Guaranteed business loans.—The Administration proposes to reduce the unacceptably high default rates for SBA guaranteed business loans by increasing the share of the default risk borne by private lenders. This will improve loan underwriting and risk assessment for each loan. In addition, the budget proposes an increase in current guarantee fees to reduce the credit subsidy provided. For the basic 7(a) loan guarantee program, fees would be increased from 2 percent to 5 percent of the amount of the SBA guarantee.

Disaster loans.—The Administration proposes to restrict eligibility for disaster loans to those borrowers who could not obtain credit elsewhere. In addition, the budget proposes to increase the interest rate on disaster loans. Together, these proposals will reduce credit subsidies by $55 million in 1992.

Small business development centers.—The budget proposes to change the current Federal/State funding ratio for small business development centers to 1 to 2 rather than the current 1 to 1 match. Many centers already receive more than half their resources from non-Federal sources.

Direct business loans.—The Administration proposes to eliminate nearly all direct business lending. Guaranteed lending would continue to be available for the same purposes. This proposal would reduce subsidies by $24 million.

Other Agencies

Postal Service revenue forgone.—The budget requests $183 million for reduced rate mail, a $290 million reduction from the 1991 enacted level. The budget proposes to eliminate abuses of these postal subsidies, saving about $113 million. These abuses were identified in the 1989 update to the Postal Rate Commission's 1986 study. The budget also proposes an across-the-board reduction in remaining subsidies, comparable to the one enacted by the Congress in 1986.

Railroad retirement windfall subsidy.—The Administration proposes to have the Rail Industry Pension fund finance a portion of the benefits currently paid out of the Federal Windfall Subsidy account, and to reduce corresponding general revenue appropriations to the Windfall Subsidy account. Benefit payments will not be smaller. Now, rail pensions are reduced by 25 percent of any Windfall benefit payable, effectively shifting pension costs to the taxpayers. This proposal would return a small portion of financial responsibility to the rail sector, without affecting beneficiaries. The rail sector would receive a subsidy of over $1,000 per employee.

Appalachian Regional Commission (ARC).—The budget requests $100 million for the ARC, compared to $170 million appropriated by the Congress in 1991. The Commission was established in 1965 to help alleviate economic and social distress in the Appalachian region through a combination of social programs and highway development that would end the region's relative isolation. Since the inception of the ARC, more than 2,000 miles of highways, two-thirds of the entire Appalachian Highway Development System, have been completed and economic disparities between the region and the rest of the country have narrowed considerably.

Tennessee Valley Authority (TVA).—The budget proposes $91 million for the TVA, a reduction of $44 million from the 1991 level. TVA's economic development program would be terminated along with alcohol fuels research and development activities. Economic development is more appropriately a State and local responsibility with Federal assistance provided through other, existing Federal programs. Large increases for alcohol and alternative fuels research in other Federal agencies allow this TVA research program to be ended. The budget also assumes a higher level of industry cost sharing in TVA's fertilizer program in order to reduce Federal costs.

Federal Emergency Management Agency.—As part of the administration's overall strategy to focus resources for homeless assistance in programs that provide comprehensive, longer term solutions, funding for emergency food and shelter is reduced at the same time that funding for other homeless programs is increased. Other programs, such as those operated by the Departments of Housing and Urban Development and Health and Human Services, go beyond the immediate needs for food and shelter by providing services to help homeless individuals move on to more stable and productive lives. Overall, the budget proposes $1 billion for targeted homeless assistance programs.

INCREASES

The terminations and reductions discussed above have provided room under the statutory discretionary funding caps for increases in deserving programs. Table B–6 shows the major domestic discretionary increases by agency. These increases are discussed in greater detail in other chapters of the budget.

[1] Obligation limitations of $2,251 million in 1991 and $2,513 million in 1992 are included in the budget authority column but not included in the totals of this table.

[2] Enacted level excludes one-time financing to forward fund BIA schools on a July 1 to June 30 calendar.

[3] 1991 level includes proposed supplemental.

[4] Budget authority of $200 million that is not counted under the discretionary cap is shown in the 1991 column. It is not included in the totals of this table.

[5] Obligation limitation is shown in budget authority column but not included in totals.

IX.C. REFORMING REGULATION AND MANAGING RISK-REDUCTION SENSIBLY

Protecting and enhancing human health and welfare has always been an essential purpose of Government at all levels. The Federal Government both funds programs and imposes regulations to reduce risks to health and safety. Federal involvement in these areas has expanded enormously since World War II. There have been benefits, but also costs.

This section of the budget describes:

- The Administration's approach to regulatory reform.
- Problems associated with managing risk-reduction sensibly.
- Concepts for managing, and budgeting for, risk reduction.
- A 1991 Risk Management Budgeting Initiative to affect development of the 1993 budget and the regulatory agenda

THE ADMINISTRATION'S APPROACH TO REGULATORY REFORM

The Administration is committed to the prudent use of Federal regulation to achieve social benefits where these are not provided by the marketplace. This commitment is based on the principles of Executive Order Nos. 12291 and 12498 which require that Federal regulation be based on adequate information; that the benefits of Federal regulations exceed their costs; and that regulatory agencies develop an annual regulatory plan so that Congress and the public may know what regulations are likely in the coming year.

OMB's Office of Information and Regulatory Affairs (OIRA), working with the President's Council on Competitiveness, reviewed in 1990 over 2,100 rules—to ensure that necessary and cost-effective Federal regulations were promulgated and that the principles of Executive Order No. 12291 were applied. OMB also reviewed more than 3,000 agency information collection requests—to ensure they imposed minimal burdens, had practical utility, and were not duplicative. These reviews led to significant improvements.

The Administration has, in addition, reaffirmed the principle of Executive Order No. 12612, "Federalism," that decisionmaking be left to State and local governments wherever possible. Many policy decisions are best left to those levels of government closest to the constituencies the decisions will affect.

In conducting its reviews, OIRA emphasized benefit cost analysis and the use of performance standards that establish regulatory goals, letting the regulated community devise the most efficient method of meeting the standards. Performance standards govern outcomes and results rather than inputs and methods.

Where possible, the Administration has also encouraged the tailoring of regulatory programs and information collections to reduce their burdens on small business. Small business often lacks the capacity easily to absorb the costs related to regulatory programs.

PROBLEMS ASSOCIATED WITH RISK MANAGEMENT

There is risk in everything—in nature, in individual behavior, in the behavior of others. Table C–1 shows risks related to certain common events and activities.

- Out of every one million people in the United States exposed to the following risks, 196,000 die from all forms of cancer, 13,400 from motor vehicle accidents, 7,700 from home accidents, 960 from fires, and 17 from venomous bites and stings.
- Heart disease claims one of every four Americans, and much of this risk could be classified as both behavioral (smoking, diet) and natural (genetic predisposition, aging).
- Accidents involving motor vehicles claim one life in every 75; fatality risk is, of course, dramatically influenced by individ-

Table C–1. SELECTED RISKS TO LIFE

Cause of Death	Mortality Risk[1] per million persons exposed	Average Risk per exposed individual
Smoking (1 pack/day)[2, 4]	252,000	1 in 4.0
Heart Disease[8]	230,000	1 in 4.3
Cancer (all causes)[4, 7]	196,000	1 in 5.1
Motor vehicle accidents[10]	13,400	1 in 75
Passenger cars	7,350	1 in 140
Passenger cars, restraints used	4,816	1 in 210
Passenger cars, restraints not used	8,757	1 in 110
Home accidents[4]	7,700	1 in 130
Homicide[8]	7,000	1 in 140
White females, 15–24 years[3]	400	1 in 2,500
White males, 15–24 years[3]	1,100	1 in 910
Black females, 15–24 years[3]	1,700	1 in 590
Black males, 15–24 years[3]	10,100	1 in 100
Drowning[6]	2,520	1 in 400
Cancer from exposure to medical X-rays[7]	1,400	1 in 710
Fires[6]	960	1 in 1,050
Cancer due to cosmic radiation from living at 5,280 feet instead of sea level[7]	560	1 in 1,800
Cancer from aflatoxin in 4 tablespoons of peanut butter per day[4, 7]	560	1 in 1,800
Electrocution[6]	371	1 in 2,700
Cancer from radon in drinking water at 1.5 picocuries per liter[4]	259	1 in 3,900
Commercial aircraft accidents (one round trip per year)[9]	51	1 in 19,600
Cancer from chloroform in drinking water at EPA limit of 0.1 milligram per liter[4]	42	1 in 24,000
Lightning[6]	35	1 in 28,500
Bites and stings by venomous animals and insects[6]	17	1 in 58,800

ual behavior—miles driven, driver care, use of alcohol, use of seat belts and vehicle weight.

- The risk of death from homicide (about 1 in 140) is distributed unevenly across the population—for the 15–24 age group, for example, about 1 in 2,500 for white females, but almost 1 in 100 for black males (25 times greater).

Risks also vary by an individual's age and the duration of individual exposure. Whereas cancer and heart disease are highly correlated with old age, accidents are the leading cause of death up to the age of 44. Risky activities (e.g., automobile travel) may result in immediate death or serious injury, while other behavioral choices (e.g., smoking) involve long-term exposures that may lead to chronic illness or death later in life.

Cost Effectiveness of Federal Intervention

Table C–2 shows the risks and costs associated with selected Federal regulations.[1] As can be seen, the cost-effectiveness (in constant 1990 dollars) of regulatory actions varies over more than eight orders of magnitude—from about $100,000 per premature death prevented (for certain automotive safety features) to more than $5 trillion per premature death prevented (for regulating wood preserving chemicals as hazardous wastes). This range shows clearly that society's resources for reducing risk are being poorly allocated. On average, spending $2 million dollars on highway safety saves at least one life in just a few years. However, the same amount spent regulating cancer risks posed by wood preserving chemicals prevents one cancer case every 2.9 million years.

Table C–2 also shows that:

- Department of Transportation agencies (i.e., the Federal Aviation Administration and the National Highway Traffic Safety Administration) apply relatively consistent standards to determine whether benefits warrant costs. Most significant OSHA safety standards are similarly cost effective. But EPA regulations and OSHA health standards often entail very large costs for every premature death prevented.
- Programs intended to prevent deaths caused by injury are generally more cost-effective than programs aimed at reducing the mortality risk of environmental and occupational cancer. The cost of regulations aimed at reducing transportation injury risks have consistently remained under $2 million per death averted. However, many regulations targeted at occupational, environmental and dietary cancer risks have been extraordinarily costly.
- Many cancer risks from environmental exposures (excluding smoking and diet) are very small relative to other threats to human health. Nevertheless, about half of the significant regulations listed in Table C–2 (and a much larger percentage of the most expensive Federal regulatory actions) are aimed at reducing these same small cancer risks.

---

[1] All cost-effectiveness ratios provided are in constant 1990 dollars. These estimates can be compared to what can be discerned from individual behavior. A recent survey of this literature found estimates ranging from $1.6 million to $8.5 million. The authors placed more confidence in the estimates at the lower end of this range. *See* Ann Fisher, Lauraine G. Chestnut, and Daniel M. Violette, "The Value of Reducing Risks of Death: A Note on the New Evidence," *Journal of Policy Analysis and Management*, vol. 8, no. 1 (1989), pp. 88–100.

The Context of Risk Management

Progress has been made in reducing health and safety risks. Life expectancy has increased from approximately 45 years at the turn of the century to the present 71 years for men and 78 years for women. Government helped with this, through immunization and public health programs. But longer lives have also resulted in more instances of chronic disease, such as cancer and heart disease, which now account for almost 60 percent of deaths.

Significant percentages of cancer and heart disease are attributable to such self-induced risks as smoking, alcohol abuse and poor diet. In fact, smoking is responsible for one in every six deaths in America—390,000 deaths per year (87 percent of lung cancer deaths, 30 percent of all cancer deaths and 21 percent of heart disease deaths). Alcohol abuse was responsible for half of the 47,000 highway deaths in 1988 and 40 percent of drownings. It is a major cause of cirrhosis, the ninth leading cause of death in the United States; it has also been linked to violence, homicide and suicide.

Indeed, Secretary of Health and Human Services Sullivan has pointed out that control of fewer than ten risk factors could prevent between 40 and 70 percent of all premature deaths, a third of all cases of acute disability and two-thirds of all cases of chronic disability. Most of these risk factors are within the control of the average citizen—stop smoking, wear seat belts, increase exercise, improve eating habits, end drug or alcohol abuse, seek early prenatal care and necessary medical examinations and immunizations.

The individual's perception of risk to health and safety depends on a variety of factors including the individual's confidence in private and public institutions. Those with confidence in America's institutions tend to rely on those institutions to implement general injunctions to reduce risks. Those who lack such confidence tend to want Government to regulate potential risks, assuming "worst case" scenarios for both risk and institutional behavior. The problem of perception is further complicated by what is often a lack of agreement among scientists and "experts."

Federal Budgetary Programs

The Federal Government now funds a variety of programs to reduce risks to health and safety. While many of these programs produce important benefits—Corps of Engineers flood control programs and Department of Transportation air safety programs—they are also costly. The budget requests $18.4 billion in 1992 for major health and safety risk-reduction programs, $91.4 billion over the 5-year period 1992–96 (see Table C–3).

Federal Regulatory Programs

Federal health and safety regulation has similarly resulted in significant benefits. Federal control of emissions to air and water and of the safe disposal of wastes can yield substantial environmental and health benefits. EPA's cost-effective rule phasing down the use of lead in gasoline has resulted in a marked decline in the ambient air levels of lead in U.S. cities. Similarly, Federal regulation of auto safety over the last 20 years has yielded important reductions in the annual toll of deaths and injuries on the Nation's highways.

The costs of regulation are, however, enormous—estimated as high as $185 billion annually in direct costs on the private sector and State and local governments—nearly $1700 for every taxpayer. Federal regulation is also intrusive. The Code of Federal Regulations contains well over 100,000 pages. In 1990, over 1200 new rules were added, and 1990 amendments to the Clean Air Act, alone, will require scores of new rules over the next several years.

REDUCING THE MOST RISK FOR THE BUCK

The standards for determining Government spending and regulatory program priorities are haphazard, leading to great disparities in benefits in relation to costs. To remedy this problem, the Administration is advancing a new initiative: Risk Management Budgeting—careful risk assessment and analysis of programmatic alternatives. Risk Management Budgeting should enable decision makers to reallocate scarce resources to produce both lower risks and lower costs.

Table C–3. **EXAMPLES OF FEDERAL HEALTH AND SAFETY PROGRAMS**[1]

(Budget authority; in millions of dollars)

	1992	1992–96
Department of Agriculture:		
Rural Water and Disposal Grants	225	1,125
Food Safety Inspection Service	425	2,124
Forest Service Firefighting	302	1,511

Centers for Disease Control	1,397	6,985
Total	18,440	91,359

[1] Selected programs $100 million or more annual budget authority.

[2] Obligations (includes user fees).

Risk Management Budgeting

Risk.—Risk is the individual likelihood (e.g., one accident in over nine million airline flights) of harm (e.g., airplane crash) from some level of exposure (e.g., 110 million airline flights 1975–85) to a hazard (e.g., windshear at airports). Risk and exposure are combined to determine how much harm (e.g., 12 crashes and 400 lives lost) is caused. The term "risk" is also used to represent the sum of all individual risks, particularly when developing population estimates.

Risk-reduction Analysis.—Risk Management Budgeting requires the establishment of common units of measurement that enable risk reduction benefits and costs to be compared across a range of options and incremental funding levels within a program. This will allow the allocation of resources to achieve the greatest net benefits. Initially, Risk Management Budgeting will be applied to resource allocation within individual programs. In subsequent years, as many programs employ the technique, it will be possible to allocate resources across programs. Thus, benefit estimation requires the establishment of uniform government-wide standards for performing risk assessments.

Cost estimates should include the opportunity cost of the resources required by a given program (or program alternative) including both private and Federal budget costs. The opportunity cost of an alternative is the value of the benefits foregone due to the selection of that alternative.

Some programs address activities and events that may lead to immediate death (e.g., automobile safety), while others seek to reduce chronic or latent illness (e.g., reduced air pollution or the fostering of low-fat diets). The measure used in Table C–2 is cost per premature death avoided (adjusted for some of these differences, but not all).

Some suggest analysis should use "life-years" instead of "lives," since the public generally places a higher value on reducing risks faced by children than on increasing longevity *per se*. Others suggest it should also take into account ancillary benefits (for example, the commercial and private benefits of an improved highway system, in addition to reduced highway fatalities brought about by the system).

Good analysis must also avoid upper-bound estimates or "worst-case" scenarios; these mislead policy makers and the public and exaggerate the amount of risk reduction that can be achieved; they also create a systemic bias in favor of programs and policies that would eliminate exaggerated risk, while neglecting high risks elsewhere.

For example, the first five regulatory actions listed in Table C–2 have identical cost-effectiveness ratios of $100,000 per premature death avoided. However, the baseline mortality risk varies from five premature deaths per million persons exposed to almost 40,000—a factor of more than 7,000. Focusing exclusively on risk would have led decision makers to ignore the relatively low hazards from aircraft cabin fires, even though they were relatively inexpensive to remedy. Similarly, many of the regulations in Table C–2 have relatively large baseline risks that are very expensive to remedy—hence, their cost-effectiveness ratios are quite unfavorable.

If individual or population risk alone is used in setting program priorities, there is no guarantee that the programs selected are reducing risk sensibly. Large individual or population risks, that are very expensive to reduce, may not be cost-effective. Only by considering both the benefits and the costs of risk reduction can sensible decisions be made.

1991 RISK MANAGEMENT BUDGETING INITIATIVE

The 11 pilot programs selected for Risk Management Budgeting in 1991 span the interests of Government—from nuclear waste cleanups at the Department of Defense and the Department of Energy to regulation of clinical laboratories by the Department of Health and Human Services. Each program was evaluated for Risk Management Budgeting potential, as well as agency interest in applying Risk Management Budgeting to a particular program.

These pilot programs have been chosen because they:

- are aimed at mitigating health and safety risks;
- have substantial resource requirements over the next five years;
- are amenable to risk budgeting analysis in program priority settings; and
- are minimally quantifiable.

Budgetary Programs

There follow descriptions of four budgetary programs which will be subjected to Risk Management Budgeting in developing the 1993 budget. Agencies will, in consultation with OMB, complete the assessments during 1991.

Department of Energy (DOE).—Environmental Restoration and Waste Management is one of the fastest growing programs in DOE ($4.2 billion requested in the Budget for 1992). DOE has nearly 100 sites located in 31 States and territories containing various waste types (including radioactive, hazardous mixed, and sanitary wastes). Some of these date from World War II. DOE is developing a methodology for better setting cleanup priorities in order to maximize risk reduction across its many sites and, by 1993, will be ready to use this methodology more effectively in formulating future budget requests.

Department Defense (DOD).—The DOD Environmental Restoration Program is currently addressing the cleanup requirements of over 17,000 sites, with $1.3 billion requested in the budget in 1992. DOD is testing, a "Defense Priority Model" designed to use site-specific environmental data and other factors (including the proximity of hazardous wastes to human populations) to develop preliminary rankings of risk. The purpose is to assist decision makers in determining funding priorities for remedial actions among DOD sites requiring clean-up. The DOD model was developed in consultation with EPA and the States, and is being evaluated for technical validity by the National Academy of Sciences.

Defense/Energy.—While the safety record of the U.S. nuclear weapons stockpile has been impressive to date, the recent report of the "Drell Panel" raised health and safety concerns about current and future nuclear warheads and missile systems, primarily with respect to the risk of accidentally dispersing plutonium into the environment. DOD has budgeted funds to address some of these concerns, and, in conjunction with the Department of Energy, is studying whether additional steps should be taken. Existing analyses seem to focus primarily on the tradeoffs between the safety and military capabilities of weapons systems, rather than on the tradeoffs between safety and costs. Risk Management Budgeting would be used as a means of determining whether to augment the existing nuclear weapons safety program, and, if so, which risks to address first. It would provide a focused assessment of the actual gains in safety that can be made, and at what cost. Also, to the extent that more data on nuclear safety is required to provide an adequate benefit-cost analysis, Risk Management Budgeting would clarify which experiments are the most cost-effective to conduct.

Department of Health and Human Services (HHS) Immunizations.—Although over 95 percent of all children entering school have received their immunizations, low immunization levels among low-income urban infants and toddlers have been a factor in the rising number of measles cases (33 percent more in 1990 than in 1989). The budget includes an infant immunization initiative intended to evaluate the potential effectiveness of linking continued participation in low-income assistance programs (Women, Infants, and Children, Medicaid, Aid to Families with Dependent Children) with documented immunization of young children. Risk Management Budgeting can be an effective tool in reducing both health risks and future budget exposure.

Regulatory Programs

OMB will in 1991 undertake Risk Management Budgeting with respect to the following seven regulatory programs.

Food Safety.—The Department of Agriculture (USDA) is responsible for the safety of meat and poultry, and operates a universal inspection system intended to achieve such safety. The Food and Drug Administration (FDA) regulates foods not regulated by USDA based on a number of concerns, including pesticide residue tolerances set by the Environmental Protection Agency (EPA).

Two of these agencies are currently addressing certain of these risks though new regulatory initiatives—USDA regarding meat and poultry inspection, and EPA regarding pesticide regulation. Risk Management Budgeting will estimate food risks and the costs of the risk reduction so as to provide a useful benchmark for evaluating these initiatives and ensure that Federal expenditures obtain the highest possible return on investment.

Seafood Safety.—Industry, consumer groups, and several Congressional committees have all called for legislation to expand the existing mandatory seafood inspection program operated jointly by the Food and Drug Administration (FDA) and the Commerce Department's National Oceanic and Atmospheric Administration (NOAA). The National Academy of Sciences' (NAS) Institute of Medicine released in January 1991 the first comprehensive evaluation of the health effects of fishery products available to the consumer. The NAS concluded that (1) most health risks associated with seafood originate in the environment and should be dealt with by control of harvest or at the point of capture and (2) that, although inspection at the processing level is important to maintain safety of seafood, there is little evidence that increased inspection activities at this level would effectively reduce the incidence of foodborne disease.[1]

A joint Food and Drug Administration (FDA)/Center for Disease Control (CDC) risk assessment shows that the risk of acute foodborne disease from eating fish (excluding raw shellfish) is 1 in 2 million; from chicken, 1 in 25,000; and from raw shellfish alone, 1 in 1,400.[2] FDA's risk assessment thus supports the first conclusion of the NAS report: the health problem associated with seafood lies primarily with raw shellfish, and regulators should try to solve that problem in the water—before shellfish are harvested.

To address the shellfish risk, the budget increases spending for Federal seafood regulation by $23 million and proposes new Federal authorities that will help FDA, NOAA and State regulators prevent shellfish from contaminated waters from reaching the marketplace. Of the $23 million, $9 million will be recovered through user fees charged to seafood processors to cover the costs of incremental increases in inspections (in accordance with Administration policy to charge fees for Federal services that provide a private benefit to industry over and above any benefit to public health or safety). The budget also includes an additional $7.5 million in FDA (a 22 percent increase over 1991) and $6.5 million in NOAA (a 37 percent increase over 1991) to support FDA and NOAA research, consumer education efforts, and cooperation with States to improve seafood safety overall.

Seafood regulation should be based on science and epidemiology. It thus offers an important opportunity to test Risk Management Budgeting. Risk Management Budgeting should assist FDA, NOAA and the States in designing a regulatory and inspection system that maximizes risk reduction at minimum cost.

Occupational Exposure to Cadmium.—Cadmium is a heavy metal which appears in different forms in the workplace, some more toxic than others. Studies show a correlation between adverse health effects and high-level exposure, but these associations are much more uncertain at exposure levels commonly found in the workplace. Compounding the uncertainty of low-dose risk estimates is the fact that epidemiological studies show a synergistic (but unquantified) effect between cadmium exposure and smoking.

The Occupational Safety and Health Administration (OSHA) issued a proposed rule in February 1990 which would reduce the permissible exposure limit (PEL) to cadmium from the present 100 or 200 micrograms per cubic meter of air (μg/m^3), depending on its form, to 1 or 5 (μg/m^3). (Major industrial nations generally limit cadmium exposure to 50 (μg/m^3); none has set a limit below 20 (μg/m^3).) According to the latest *Regulatory Agenda*, OSHA plans to issue a final rule on cadmium exposure by September 1991.

OSHA has estimated that achieving the 1 (μg/m^3) PEL would prevent 14 excess cancer deaths and 13–189 kidney dysfunction cases a year at a cost of about $160 million per year; and compliance with the 5 (μg/m^3) PEL would prevent four excess cancer deaths and 11–41 excess kidney dysfunction cases per year at a cost of $57 million per year. Since estimates of both health effects may be exaggerated (particularly in light of observed synergism between smoking and cadmium inhalation), the Risk Management Budgeting effort will carefully review OSHA's risk assessment.

1988 Clinical Laboratory Improvement Amendments (CLIA 88) Implementing Rules.—The Health Care Financing Administration (HCFA) is responsible for surveying and certifying all Medicare participating clinical laboratories (hospital-based and independent) and interstate commerce laboratories, but not physician office laboratories. CLIA 88 was enacted to enhance the quality of laboratory services by extending Federal oversight to Medicare physician office laboratories (POLs) and establishing new quality assurance standards for cytology. CLIA 88 requires the Department of Health and Human Services (HHS) to promulgate rules outlining these standards for July 1991 implementation.

[1] Committee on Evaluation of the Safety of Fishery Products, *Seafood Safety*, National Academy of Sciences, National Academy Press, Washington, D.C., 1991.

[2] Center for Food Safety and Nutrition, Food and Drug Administration, manuscript in preparation, 1990. These risk calculations are based on a single, 4 oz. serving.

In May 1990, HHS published a proposed rule describing the standards. Most of the 60,000 comments received by the close of the comment period in September 1990 expressed concern regarding the effects of the rule on health care cost containment, access, and quality. While HCFA failed to provide a regulatory impact analysis, comments indicated that the rule would cost the private sector billions of dollars and have uncertain benefits. HCFA estimates user fees covering enforcement alone would cost $540 million. The Risk Management Budgeting effort will assist HHS and HCFA to access risks associated with physician office laboratories and design cost effective standards for them.

Corrective Action for Certain Hazardous Waste Treatment, Storage and Disposal Facilities.—Current regulations promulgated under the Resource Conservation and Recovery Act (RCRA) give the Environmental Protection Agency (EPA) authority to require "corrective action" only at Regulated Units (RUs) that have received hazardous waste since July 1982. Solid Waste Management Units (SWMUs) that have not received wastes since that date are not subject to these requirements. However, legislation enacted in 1984 directs EPA to develop a program to deal with these units as appropriate. In July 1990, EPA published a proposed rule that would require "corrective actions" at virtually any facility with a SWMU that has releases to the environment.

EPA has estimated that this rule would impose net present value social costs of $10–60 billion (other estimates are higher); $3–18 billion of these costs would be borne by the Federal government. (DOE estimates the cost of cleaning up its own facilities will exceed $100 billion.)

Human health and environmental benefits expected to be obtained through these actions have not been estimated, making it difficult for policy makers to determine a cost-effective regulatory strategy. EPA is now engaged in an effort to develop an improved analysis of both benefits and costs before policy makers select a course of action. Risk Management Budgeting will help to assure cost effective regulations of SWMU's and proper stewardship of scarce Federal budget authority.

Department of Labor (DOL).—Certain OSHA Regulations are more effective than others in reducing occupational illnesses and injuries. Risk Management Budgeting will enable OSHA to identify the most successful regulatory approaches. Currently, OSHA's regulatory planning is largely reactive. As a result, OSHA often regulates high-profile, low-risk hazards, while leaving low-profile, high-risk hazards unregulated. Risk Management Budgeting will help OSHA develop an analytical approach to ranking workplace hazards for the Administration's 1992 regulatory agenda—according to magnitude, preventability, and potential benefit of regulations.

Department of Transportation (DOT).—Motor vehicle accidents are responsible for about 45,000 fatalities and 3.2 million injuries annually. The Department of Transportation is now in the process of examining its highway safety programs to determine their relative cost effectiveness. Included will be projects that prevent crashes, such as evaluation of heavy truck antilock brake technology, as well as those that protect individuals if a crash were to occur. In addition, the Department is attempting to improve its risk analysis capability with the development of a National Advanced Driving Simulator. The Simulator, when completed, will be the most advanced of its kind in the world, and will significantly enhance the capabilities of the Department and safety experts to evaluate risk reduction strategies in highway safety. Risk Management Budgeting will assist DOT in designing its future regulation to target the highest risks and then regulate to reduce these risks in the most cost effective manner.

IX.D. REFORMING THE BUDGET PROCESS

The Budget Enforcement Act of 1990, which resulted from the bipartisan negotiations on the 1991 budget, made important changes in the Federal budget process. The Act:

- extended and overhauled the Balanced Budget and Emergency Deficit Control Act of 1985 (Gramm-Rudman-Hollings);
- strengthened the rules and procedures of the Congressional Budget Act of 1974;
- reformed the rules for budgeting and accounting for the cost of Federal credit programs; and
- established rules and procedures to put caps on discretionary spending; enforce pay-as-you-go rules for mandatory spending and revenue programs; and help protect the social security trust fund reserves.

These measures, if carried out in good faith by all participants in the budget process, should significantly improve the effectiveness of the budget process. However, there is still room for additional improvement—as would be achieved with the addition of the following.

MAKING THE PROCESS WORK BETTER

Joint Budget Resolution.—Under current law, the annual congressional resolution on the budget is a concurrent resolution, which does not require the President's signature. A joint resolution, which needs the President's approval, would guarantee Presidential involvement in budget negotiations early in the process. The budget resolution sets the parameters for all subsequent legislation related to the budget—appropriations bills, revenue measures, and reforms of mandatory programs in reconciliation bills. Formal Presidential involvement in the development of the budget resolution should reduce the potential for conflict between the Administration and the Congress on the subsequent bills that typically pass in the later stages of each session of Congress.

Biennial Budgeting.—If the budget process covered 2 years instead of 1, the time spent on allocating resources would decrease, leaving more time to spend on program oversight and management. The 2-year bipartisan agreement reached in 1987 for 1988 and 1989 and the 5-year agreement reached last fall for 1991 through 1995 have demonstrated that it is possible for the Administration and the Congress to agree on the resource levels for broad budget categories. However, there have been no attempts by Appropriations Committees to actually appropriate comprehensively on a 2-year basis. In the past, there was justifiable concern that biennial budgeting could easily degenerate into a process of nearly continuous supplemental appropriations. The threat of within-session sequesters provided by the new Budget Enforcement Act has reduced the likelihood of that happening.

MAKING THE PROCESS MORE EFFECTIVE IN REDUCING THE DEFICIT

Enhanced Rescission Authority.—The Impoundment Control Act of 1974 severely restricted the President's powers to withhold funds from spending. If the President determines that all or some of the amount provided in an appropriations item should not be spent, the President must ask Congress to "rescind" it. Under the 1974 Act, rescissions are not effective unless approved by both houses of Congress within 45 days. If the rescission is not approved, the funds must be spent. This means that either house of Congress can defeat the President's rescission proposals by simply ignoring them.

In practice, the Congress has used these procedures to virtually eliminate the President's ability to reduce unnecessary spending through rescissions. The majority of rescissions proposed since the Act was passed have been defeated by congressional inaction. In recent years, Congress has approved very little of the savings proposed by the President. In the last 5 years 173 rescissions were submitted, totaling $16.7 billion. Of those, just 7 were approved, totaling $181 million, or just 1 percent of the amount the President proposed.

Proposing a rescission under current law is ineffective and using Presidential veto authority to eliminate individual items is often impractical. At present, the President is faced with vetoing an entire appropriation bill in order to eliminate an item the bill contains. The entire Government is financed by only 13 appropriations bills, each of which includes many billions of dollars to fund many programs. Vetoing an entire bill, and possibly shutting down major portions of the Government's operations, in order to eliminate a few items of expenditure is an undesirably crude procedure.

As discussed below, the President strongly supports a line-item veto amendment to the Constitution as the most effective solution to the current situation. However, absent such an amendment, he has supported a form of enhanced rescission authority called "legislative line item veto." This form of rescission (first proposed in the 101st Congress and reintroduced this year by Senators Coats, McCain, and others) would require an up-or-down vote in Congress on Presidential rescission proposals. The Congress could still disapprove the President's proposals, but it would be required to consider and vote on each one.

FUNDAMENTAL CHANGE—AMENDING THE CONSTITUTION

Line-Item Veto.—The President, as representative of the general interest, should have the power to strike from legislation provisions that reflect only narrow local or special interests. As with any other veto, a veto by the President of an item in a spending or revenue bill would be subject to override by a two-thirds vote in each house of Congress. This essential tool is available to the Governors of more than 40 States, who have used it successfully, without unduly shifting the balance of power between the executive and the legislature.

Balanced Budget Amendment.—A balanced budget constitutional amendment, with safeguards against achieving the balance through higher taxes, is needed to stem the steady build-up of the national debt. The health of the economy demands more fiscal discipline, and it is wrong to saddle future generations with a huge debt about which they had no say.

The Constitution should not be amended without good cause. However, efforts to balance the budget under statutory requirements, such as the Gramm-Rudman-Hollings law, have shown that statutory requirements alone are insufficient. Although the changes made by the Budget Enforcement Act are expected to increase discipline in the budget process, the weight of a constitutional requirement is needed to balance the general taxpayer's interest in spending restraint against more organized forces demanding higher spending for particular purposes.

Such an amendment would give greater weight to the interests of the future generations of voters who are not here to represent themselves in the present.

IX.E. MANAGING BY OBJECTIVES

Reflecting the President's commitment to improving the management of the Government, the Management by Objectives (MBO) system tracks the implementation of selected, major initiatives and priorities of the Administration from the time of their formulation and announcement to their ultimate outcomes.

The MBO system covers the Cabinet Departments, EPA, and NASA. In addition, there are seven crosscutting objectives: adult literacy, credit and cash management, drug control, government management and integrity, international trade and export promotion, the public service, and research and development. Agencies were asked during the 1992 budget process to pay particular attention to the adequacy of resources for achieving these MBOs.

The following sections provide progress reports for each of the participating agencies and for the selected government-wide objectives.

DEPARTMENT AND AGENCY OBJECTIVES

Department of Agriculture

Objectives are (1) to expand U.S. agricultural markets, both foreign and domestic, and (2) to encourage agricultural production and land management policies that are environmentally sound and ensure the long-term viability of the Nation's natural resource base.

Agricultural Markets.—The United States pursued international agreement on market-oriented reform of agricultural trading practices in the Uruguay Round of multilateral trade negotiations and in bilateral trade negotiations, particularly with the European Community, Japan, Taiwan and Korea. The Uruguay Round negotiations are not yet completed. It is expected that negotiations on the Uruguay Round will resume in February if, as the United States assumes, the European Community adjusts its position on agriculture. In addition, a new long-term grain agreement was negotiated with the U.S.S.R.

The Food, Agriculture, Conservation and Trade Act of 1990 (Farm Bill) significantly enhanced the market orientation of U.S. agriculture—setting the framework for food, conservation and trade policy for the coming 5 years. The Farm Bill also re-authorized important research activities and trade programs aimed at building and maintaining U.S. competitiveness in world markets.

Environmentally Sound Agricultural Production and Land Management.—In February 1989, the President announced a water quality initiative to protect the Nation's ground and surface waters. Through research and technical assistance, the program will provide farmers, ranchers and other land managers with the information necessary voluntarily to adopt improved, environmentally sound management practices which do not sacrifice profitability. Seventy-four hydrologic units and 16 demonstration projects around the country have been selected to educate farmers in environmentally-sound farming techniques. Farmers will complete implementation of the initiative by 1995.

The President signed in November the most environmentally oriented Farm Bill in history. The legislation included the creation of a wetlands reserve as part of the Environmental Conservation Acreage Reserve Program.

Department of Commerce

Objectives are (1) to conduct a fair, accurate, efficient and timely 1990 decennial census, and (2) to support a vigorous national effort to manage better our ocean and coastal environment through enhanced understanding, monitoring and prediction.

1990 Decennial Census.—The 1990 Decennial Census was a 10-year, $2.6 billion program centering on April 1, 1990 ("Census Day"). In conducting the 1990 census, the Department used a number of strategies (including mail out-mail distribution and collection of Census forms, an intense outreach and publicity campaign, and substantial increases in the use of automation). The Department also set up temporary field offices, and recruited and trained nearly 500,000 temporary employees. Reapportionment counts were delivered to the President in December 1990 and were delivered to Congress by the President in January 1991. Redistricting data are due to the States by April 1, 1991. Census data are also critical to the management of Federal grant-in-aid programs.

Ocean and Coastal Environment.—The budget includes $17 million for five major efforts, each designed to integrate existing research programs and activities at the National Oceanographic and Aeronautics Administration (NOAA). These will (1) improve our ability to detect and assess changes in coastal environmental quality; (2) increase our understanding of the influence of the Mississippi River plume on the Gulf of Mexico ecosystem; (3) increase our capability to detect and predict detrimental changes in living marine habitats and advise regulatory bodies of remedial measures; (4) use remote sensing technology to monitor and assess the effectiveness of environmental and wetland habitat management strategies for the Chesapeake Bay; and (5) increase outside access to NOAA data and related products.

Department of Defense

Objectives are (1) to allocate scarce defense dollars to the most urgent national security requirements; (2) to implement recommendations of the Defense Management Report; (3) to improve Defense medical services and readiness; and (4) to strengthen the defense technology base.

Resources for National Security.—As a consequence of a reduced threat of war with the Soviet Union, U.S. military force structure can be reduced by about 25 percent by 1995. However, as demonstrated by events in the Middle East, necessary military capabilities must be maintained and selectively strengthened and restructured to meet other contingencies. Priorities reflected in the budget for this MBO include implementing arms control while maintaining strategic deterrence and adapting conventional forces to 1990's threats.

Defense Management.—The Defense Management Report (DMR), submitted to the Congress by the President in July 1989, established a broad framework for improving the management of Defense programs. The DMR included six broad goals: (1) reduce overhead costs while maintaining military strength; (2) enhance weapons systems program performance; (3) reinvigorate the planning and budgeting system; (4) reduce micro-management; (5) strengthen the defense industrial base; and (6) improve the observance of ethical standards in government and industry. DMR achievements include a strengthened defense decision making process, a reformed acquisition process, streamlined and reduced procurement systems, standardization of automated management information systems, and significant reductions in civilian and military personnel. New initiatives in the budget and those proposed last year are projected to yield savings of over $72 billion during the 1991–1997 period.

Medical Services.—The Department of Defense is moving to improve the coordination between the military direct care system and the Civilian Health and Medical Program of the Uniformed Services (CHAMPUS). The objective is to bring the cost of providing health care under control and to improve the readiness of the medical system to support combat operations. Using a managed health care approach, the Department strives for the most cost effective and appropriate use of medical resources. A CHAMPUS reform initiative, controlling the delivery of health services in California and Hawaii, achieved savings estimated at 20 percent of the cost of CHAMPUS health programs in those States. Ultimately, a health management model, which combines the best features of CHAMPUS reform and other initiatives, will be developed for use throughout DoD.

Technology Base.—The Department is aggressively pursuing new technologies needed for the Nation's defense and ensuring maximum efficiency in the acquisition process. The Department's goals are to strengthen technology development programs in the Military Departments and the Defense Advanced Research Projects Agency through improved management, to encourage technical competition and technology prototyping that promise increased military capabilities, and to exploit the cost-reduction potential of innovative or commercially developed technologies. Research and development (R&D) laboratories and test and evaluation (T&E) facilities are being consolidated to increase their efficiency. Technology base programs will be coordinated Defense-wide to minimize duplication of effort while improving the quality, productivity, and effectiveness of RDT&E.

Department of Education

Objectives are to (1) implement the President's four principles for education (reward excellence, target funds toward those most in need, promote choice and flexibility, and promote greater accountability for educational achievement); (2) increase minority participation and retention in college degree granting programs; and (3) improve academic achievement of elementary and secondary students, especially low-income, minority, and handicapped children.

Excellence, accountability, targeting and choice.—Despite the Department's efforts, Congress failed to enact either the Administration's proposed Educational Excellence Act or the Education Performance Agreement for School Restructuring Act. The Administration will submit revised legislation for these and other initiatives to help the Nation achieve the national goals.

To make postsecondary institutions more accountable for Federal aid funds, the Department implemented regulations requiring high default institutions to submit default management plans and take related actions to reduce defaults and issue pro rata refunds for Guaranteed Student Loan (GSL) recipients. The Omnibus Budget Reconciliation Act of 1990 included further accountability and default prevention measures which the Administration had proposed, most notably eliminating high default schools from the GSL program. The 1992 budget and Higher Education Act reauthorization proposals would complete the process of restoring integrity to the loan programs.

Minorities in Higher Education.—The Department began several studies and evaluations in 1990 to identify successful strategies to encourage college attendance and completion by at-risk students. The President signed an Executive Order on excellence in education for Hispanic Americans and the Department launched an Hispanic Education Initiative. The Department also completed compliance reviews of alleged bias against Asian-Americans in the admissions process at Harvard (no violation found) and UCLA (one violation found).

Elementary and Secondary Achievement.—Progress toward the six National Education Goals will be the focus for this objective over the next decade. A study of State responses to new provisions enacted in April 1988 in the $5.6 billion Compensatory Education Program showed that, as of January 1990, most States had set only minimal achievement standards for participating students. The Department responded by launching a national campaign to get States to raise their standards and increase efforts to help low-achieving students.

In September 1990, the Department initiated a joint study with the Department of Health and Human Services on the integration of education and human services for at-risk preschool and elementary school children. The study, which should be completed in May 1991, is developing models to demonstrate this integration.

Department of Energy

Objectives are (1) to support the Nation's nuclear deterrent into the next century through modernization of the weapons production complex, including the construction of new production reactors in an environmentally sound, health conscious manner; (2) through implementation of the Environmental Restoration and Waste Management Five Year Plan (FYP), to bring active and standby facilities (including treatment, storage, and disposal activities) into compliance with applicable laws and regulations on an accelerated basis, and achieve cleanup of the Department's current inventory of inactive sites and surplus facilities by 2019; (3) to enhance U.S. energy security and environmental quality; and (4) to construct the Superconducting-Super Collider (SSC) accelerator, on schedule and within established estimates of cost, with one-third of the cost of the project to come from non-Federal sources (foreign governments and the State of Texas).

Nuclear Production.—A Modernization Review Committee was established in September 1989 (subsequently renamed the Nuclear

Weapons Complex Reconfiguration Committee) to review by November 1990 the assumptions and recommendations of the Department's January 1989 Modernization Report. This review has enabled the Secretary to make recommendations on the scope of the Department's modernization efforts, including the necessary line items in this budget to assure an orderly tracking of progress.

In August 1990, preliminary design began for both the Heavy Water Reactor and the Modular High Temperature Gas-Cooled Reactors. The draft environmental impact statement (EIS) is scheduled to be released during the Spring of 1991 and 13 hearings will be held in 5 States. All of these activities will lead to the issuance of the final EIS and subsequent Record of Decision in December 1991.

Clean-up.—The Administration is proposing $4.4 billion for 1992 for cleanup activities, a 30 percent increase over 1991 appropriated levels. In addition, the Administration is proposing a $340 million supplemental for 1991, bringing the total funding for 1991 to $3.7 billion.

The Department published its first annual update of its Environmental Restoration and Waste Management Five-Year Plan for 1992–1996 in June 1990. As part of the Department's integrated planning, budget, and control efforts, a strategic plan has been developed to identify longer-term goals, objectives, issues, and strategies. In an effort to improve overall cost-effectiveness, worker safety, and compliance with environmental requirements, the Department has conducted in-depth "Tiger Team" assessments of 17 major nuclear facilities. Detailed work plans that identify the corrective actions required to attain or maintain compliance with environment, safety, and health requirements are being prepared and implemented.

Energy Strategy.—The National Energy Strategy (NES) interim report was released to Congress in April 1990 and subsequently made available for public comment. The Department also transmitted its National Energy Strategy Options Analysis to the President in December 1990. The President's budget incorporates NES-related decisions on enhanced R&D initiatives. A final NES report will be issued after the other NES-related Presidential decisions are made.

Superconducting Super Collider (SSC).—The SSC accelerator will be built as part of the new SSC Laboratory at a site in Ellis County near Dallas, Texas. The Department has selected Universities Research Association, Inc. (URA) as its management and operating contractor to design, construct, and operate the SSC. The budget provides $534 million of Federal funds for the SSC. The 1992 program will include continued research and development on accelerator systems and detectors; a significant effort in magnet development by industrial vendors; a critical magnet systems test; and construction of accelerator enclosures, surface structures, utilities, and site infrastructure. The State of Texas will provide a total of up to $1 billion and land for the SSC with a contribution of $130 million expected in 1992. Foreign partners are expected to contribute substantially to the construction and operation of the SSC as well as to the experimental program. Follow-up discussions will continue in 1991 with Japan, Korea, European Community countries, and Canada.

Department of Health and Human Services

The objectives are (1) to improve the health of the American people, (2) to strengthen families and assure family obligations, and (3) to enhance the quality of services that the Social Security Administration delivers to the public.

Health.—The Department is implementing significant reforms of Medicare payments to physicians and expanding Medicaid to low income pregnant women and children

The Federal Government continued adding to its substantial investment in biomedical research in 1990 and 1991, as funding for NIH rose by over 7.5 percent per year. The Nation's biomedical research investment continued to pay dividends during these two years, as new therapies became available and revolutionary new techniques were introduced. The Department has also conducted the first experiment using human gene therapy; expanded support for biomedical research; and provided significantly increased funds for battling AIDS.

The Omnibus Budget Reconciliation Act of 1990 requires drug manufacturers to give State Medicaid programs prices consistent with drug prices paid by hospitals, HMOs, and Federal purchasers, and expands Medicaid eligibility to all poor children. An additional 7,000 children will be eligible for Medicaid by the year 2000. The budget targets $171 million to 10 U.S. cities with the highest rates of infant mortality. Patient Outcomes Research Teams have been established to study priority clinical conditions (including breast cancer), acute myocardial infarction, obstetrical decisionmaking in labor and delivery, and congestive heart failure.

The budget requests an additional $498 million for the National Institutes of Health to ensure that the Nation's substantial investment in biomedical research is further expanded.

The Family.—In 1990, the Department finalized regulations implementing welfare reform—the Job Opportunity and Basic Skills Training (JOBS) program—in all States; increased the number of children served by the Head Start program to 548,000; and achieved record levels of child support collections—in excess of $5.5 billion. In 1991, States will make available health insurance a presumptive part of child support awards. With the establishment of the Clearinghouse on Third Party Liability, States will be better able to identify and collect medical support ordered by courts.

Social Security Administration (SSA).—During 1990, SSA implemented nationwide outreach activities to reach low-income elderly, blind, or disabled individuals eligible for Supplemental Security Income (SSI); reduced high busy signal rates during the day from 24.3 percent in October 1989 to 1.7 percent in June 1990; enhanced its "800" telephone number to improve service to hearing impaired and non-English speaking populations; and continued to improve the efficiency of operations through the use of advanced communications and information technology.

Department of Housing and Urban Development

Objectives are (1) to help achieve, in conjunction with the Department of Justice (DOJ), an end to housing discrimination; (2) to help end homelessness, particularly for families with children and handicapped individuals; and (3) to expand economic development opportunities in distressed inner cities and rural areas; increase opportunities for the poor to improve their housing conditions, including homeownership and tenant management approaches; and increase homeownership opportunities for first-time homebuyers.

Discrimination.—The Department made significant progress in carrying out a fair housing program. It strengthened enforcement procedures and increased public and private sector knowledge of fair housing laws, standardized case processing procedures, and improved fair housing program guidance. The Department also implemented a new case tracking system and eliminated backlogs in processing fair housing complaints and in fair housing compliance reviews of housing authorities. It initiated nationwide training on proposed accessibility guidelines for handicapped persons in newly built housing, and conciliated fair housing complaints ($1.8 million for over 2,800 complaint cases).

The Homeless.—The Interagency Council on the Homeless adopted the Federal Plan to Help End the Tragedy of Homelessness in August 1990. The plan identifies eight objectives for which the agencies are developing action plans. A memorandum of understanding (MOU) between HUD and the Department of Health and Human Services (HHS) was executed in January 1990. It calls for joint demonstration projects, research, and policy development regarding homeless families and the mentally ill homeless. Specific activities include: joint funding of six demonstration projects, a jointly-funded study that will examine the cost of housing the homeless mentally ill, and coordination in the development and administration of HUD's new Shelter Plus Care and HHS's PATH programs. Another interagency effort this year includes an agreement between HUD and the Department of Labor (DOL) to coordinate the use of HUD housing resources with DOL job training resources for the homeless.

Economic Development, Housing, and Homeownership.—The President's HOPE legislation—"Homeownership and Opportunity for

People Everywhere"–was enacted in November 1990, as part of the National Affordable Housing Act. The Act authorizes $27.5 billion in 1991 and $29.9 billion in 1992 to continue existing housing programs and to create new programs. The key new programs include those proposed under the Administration's HOPE initiative and a Congressionally-initiated program, HOME Investment Partnerships Grants.

The Department announced a goal of creating one million new low- and moderate-income homeowners by the end of 1992 through a combination of urban homesteading, non-profit, and FHA programs. Over 425,000 new homeowners were created by the end of 1990. In addition, the Department launched a variety of job creation and economic independence initiatives with other Federal agencies, including HHS and Labor. These are designed to expand upon successful resident management and homesteading initiatives for assisted housing residents.

Department of the Interior

Objectives are (1) to promote responsible stewardship for the Nation's parks, wildlife refuges, and public lands; (2) to improve the use and management of the Nation's water resources; and (3) to reform the delivery of key social, financial and natural resources to Native Americans.

Stewardship of Public Lands.—The President's America the Beautiful (ATB) initiative was successfully launched in 1991. The budget continues and expands the initiative, which is a key component of the Administration's environmental policy, with $50 million (10 percent more than in 1991). ATB's programs help preserve, protect, and expand America's treasury of parks, forests, wildlife refuges and other public lands, and enhance the public's use and enjoyment of these areas. The Department has also prepared a land acquisition priority list to ensure that important landmarks (e.g., American Civil War Battlefields) are high-priorities for Federal protection.

The Department has developed comprehensive plans and strategies to address the President's goal of no net-loss of wetlands. In 1990, the Department restored 43,000 acres of wetlands (along with 23,000 acres of adjacent upland habitat) at 4,500 sites. It also accepted responsibility for management of 475 wetland easements totaling approximately 50,000 acres.

Drawing on the findings of the President's Outer Continental Shelf (OCS) Task Force and the President's June 1990 OCS decisions, the Department will provide additional environmental studies for key potential OCS leasing areas (such as Southern California), increased inspection of offshore oil and gas operations, and its enhanced oil spill response program.

Stewardship of Water Resources.—The Department completed in December 1989 an implementation plan for a full-scale National Water Quality Assessment Program and selected the first 20 study units in consultation with other Federal agencies and State agencies. It is expected that preliminary results of the first 20 studies will be available in three to four years. These results will be used for determining the status and trends in the quality of the Nation's water resources.

Native Americans.—The Department concluded agreements in 1990 with six tribal governments, permitting them to assume administration of almost all programs provided previously by the Bureau of Indian Affairs (BIA). The Department has also developed major management improvement initiatives involving Indian education, community development and fiscal responsibility. A special Interior-OMB management review team was established to review BIA management inadequacies and make necessary improvements by October 1991. The budget supports these BIA reform initiatives: it increases funding for management improvements and proposes demonstration programs for education and tribal self-determination to improve delivery of services to Native Americans.

Department of Justice

Objectives are (1) to combat and deter criminal and unlawful behavior more effectively through the vigorous and uniform investigation, prosecution, punishment, and incarceration of wrongdoers; (2) to reduce barriers to equal opportunity through vigorous enforcement of our nation's civil rights laws and reducing the time required to file criminal civil rights cases; and, (3) to reduce significantly the level of illegal immigration by rigorously enforcing provisions of the Immigration Reform and Control Act of 1986 (IRCA) and the Immigration Act of 1990, and maintaining an effective border interdiction program.

Deterrence of Crime.—Increasing investments in law enforcement are exerting downward pressure on crime rates. From 1984 through 1989, violent crime declined over 7 percent. The annual 5-year FBI Strategic Plan emphasizes prosecution of violent crimes, organized crime groups, public corruption, and multinational drug trafficking. The Drug Enforcement Administration (DEA) emphasizes immobilization of major drug trafficking organizations. The United States Attorneys (USA) are using 300 additional prosecutors allocated by the Anti-Drug Abuse Act to increase narcotics and Organized Crime Drug Enforcement Task Force (OCDETF) convictions. The Attorney General is also seeking to reprogram Criminal Division resources associated with the Organized Crime Strike Forces into the offices of the U.S. Attorneys.

Equal Opportunity.—The Department has adopted procedures to identify and monitor criminal civil rights cases that are most likely to be prosecutable. This strategy has resulted in a decrease in the time required to file criminal civil rights cases from 17.6 months in 1988 to 12 months by the end of 1990. In addition, a record number of cases (62) were filed during 1990. The Department also achieved a record overall success rate of 94.4 percent for those cases adjudicated in 1990. The Department now maintains regular contacts with HUD and has increased contacts with private fair housing groups and State and local enforcement agencies in order to identify violations of the law which are widespread or particularly egregious or difficult to resolve.

Immigration.—A primary goal of the Immigration and Naturalization Service's strategy is to reduce illegal immigration and aggressively pursue, apprehend, and present smugglers for prosecution. Significant actions include the expansion of existing investigative initiatives which deal with criminal aliens, narcotics violators, fraud faciliators, ethnic organized crime, high level domestic and international smugglers and port of entry enforcement. In addition, INS intends to use provisions established in the Immigration Act of 1990 to deport criminal aliens expeditiously.

Department of Labor

Objectives are: (1) to assist private, State and local government efforts to provide the basic skills and workplace training needed by entry-level workers, especially minority youth who will be an increasing part of the workforce in the year 2000, through enacting and implementing amendments to the Job Training Partnership Act (JTPA); and (2) to make it easier for families to meet their child care needs.

Workplace Skills and Training.—The Department proposed amendments to the Job Training Partnership Act (JTPA) in June 1989 which would have targeted services on those most at risk. Although both the House and Senate passed separate amendments to JTPA, no final legislation emerged from the 101st Congress. The Administration will transmit modified JTPA amendments to the 102nd Congress to the same ends.

The budget includes $1.1 billion for the proposed Title II–A employment and training programs for disadvantaged adults and $1.3 billion for a new Title II–B program to help prepare severely disadvantaged youth (ages 16 through 21) for the workplace. The budget also requests $25 million for a new demonstration program called Youth Opportunities Unlimited (YOU). This multi-year challenge grant program will assist localities on a matching basis to develop a coordinated resources policy for youth living in high poverty inner cities and rural areas. The Department also launched in 1990 a workforce quality initiative to develop national competency guidelines for work readiness.

Child Care.—In November 1990, the President signed major new child care provisions into law as part of the Omnibus Budget Reconciliation Act of 1990. Consistent with the President's commitment to expanding parents' choices in caring for their children, the new assistance provided to low income families consists largely of refundable tax credits. Under the Act, the existing Earned Income Tax Credit (EITC) is increased and adjusted for family size. In addition, two new credits are added to the EITC: a supplemental young child credit and a health insurance credit. The Act also contains the first Federal grant program that requires that parents be given the option of receiving a certificate enabling them to select the caretaker of their choice.

Department of State

Objectives are (1) to promote U.S. national and international security by political and diplomatic means; (2) to advance the cause of democracy, solidify our democratic alliances, and promote human rights and satisfaction of humanitarian needs; (3) to advance the U.S. agenda on economic and trade issues; and (4) to strengthen the total security environment for U.S. diplomatic personnel, facilities and national security information worldwide.

International Security.—In 1990, the Department negotiated a Conventional Forces in Europe (CFE) treaty resulting in significant Warsaw Pact and NATO force reductions; signed treaties with the Soviet Union agreeing to deep reductions in chemical weapons stockpiles and limits on nuclear tests; played a leadership role in the events which culminated in the re-unification of Germany; and forged an international coalition to combat Iraqi aggression in the Persian Gulf. The Department also successfully and fully implemented the Tripartite Agreement on Namibia and Angola.

Democracy.—The Department worked with Congress to secure $370 million in 1991 to provide food aid, technical assistance and training to Eastern Europe's emerging democracies and to establish Enterprise Funds (a 3-year, $300 million package) for Poland and Hungary. The budget includes $400 million for these purposes in 1992. In addition, the budget includes $511 million for refugee assistance (including continuation of the Comprehensive Plan of Action for Indochinese refugees).

World Economy.—In addition to assistance provided to Eastern Europe, the Department worked with the Agency for International Development (AID), the Department of Agriculture, and the Treasury Department to implement the Enterprise for the Americas Initiative (EAI), which the President announced in June 1990. One ultimate goal of the EAI is to create a hemisphere-wide free trade area. A second goal is to promote investment in Latin America. To reach this goal, the U.S. Government will reduce outstanding balances associated with AID and PL 480 loans in return for Latin American economic policy reforms. The Department, in concert with the Treasury Department, also began negotiations with various Latin American countries in December 1990 on reducing PL 480 debt. The Department has, in addition, helped design short- and medium-term actions to respond to the economic impacts of the Gulf Crisis.

Security for U.S. personnel and Facilities Abroad.—The Bureau of Diplomatic Security's Standards Review Committee has completed the revision of all existing security standards applicable to overseas posts, ensuring that the standards meet specific embassy requirements. The budget includes $245 million to continue the diplomatic security program. This objective is nearing completion.

Department of Transportation

Objectives are (1) to improve overall transportation safety and security by supporting those programs that reduce transportation fatalities and accidents; (2) to keep the National Airspace System modernization moving forward to ensure that aviation user demands can be safely and efficiently accommodated; and (3) to develop a National Transportation Policy (NTP) to maintain and expand the Nation's transportation system; foster a sound financial base for transportation; keep the transportation industry strong and competitive; ensure transportation system support of public safety and national security; protect the environment and quality of life; and advance U.S. transportation technology and expertise.

Transportation Safety and Security.—Preliminary data indicate that the Nation surpassed the President's milestone of reducing the highway fatality rate in 1990 to 2.1 deaths per 100 million vehicle-miles. The Department held a "Safety Summit" in April 1990 involving 170 law enforcement administrators in State, county, and municipal agencies. The Summit's recommendations were incorporated in the Department's plans and programs for improving traffic safety over the next several years. The Department has also made significant progress in implementing the safety rulemakings required of the Federal Railroad Administration (FRA) by the Rail Safety Improvement Act of

1988. FRA has issued nine final safety rules in areas such as civil penalties and willful tampering with safety devices. A number of other safety rulemakings are underway and will continue to be a high priority in the months ahead.

National Airspace System (NAS).—The Department awarded the largest NAS Plan contract for development of the Advanced Automation System in 1988, and the first major deliverables were received in the first quarter of 1990. The Nation's first Terminal Doppler Weather Radar system went into regular operation at Denver's Stapleton Airport in June 1990. The system is designed to protect aircraft from wind shear, which has killed more than 650 people in the last 25 years.

National Transportation Policy.—The National Transportation Policy (NTP) was completed and released by the President in March 1990. The Omnibus Budget Reconciliation Act of 1990 included FAA reauthorization legislation, incorporating the Administration's proposal for passenger facilities charges (PFCs). PFCs will help local airports address their funding needs to deal with growing airport capacity problems.

Department of the Treasury

Objectives are (1) to secure enactment of an acceptable Financial Institutions Reform, Recovery, and Enforcement Act (FIRREA) and use the resources made available to the Resolution Trust Corporation to achieve the elimination of the current backlog of insolvent thrifts within the next 3 years; (2) to make significant progress in implementing the Administration's initiative to reduce the debt burdens of developing nations and assist those nations to acquire capital to stimulate economic growth; and (3) to modernize the U.S. tax administration and collection system in order to increase revenues, make the system more efficient, reduce taxpayer burdens, and improve taxpayer compliance.

Savings and Loan Recovery.—The Resolution Trust Corporation (RTC) and the RTC Oversight Board, which the Secretary of the Treasury chairs, were established with the enactment of FIRREA in August 1989. The Oversight Board has developed general policies and procedures for RTC operations on such matters as case resolution methods; the management and disposition of assets; the use of private contractors; and the use of notes, guarantees and seller financing. The Oversight Board reviewed and approved the RTC's financial requests for the use of the $50 billion made available in FIRREA.

As of the end of November 1990, the RTC has taken over 516 thrifts with over $260 billion in assets and more than $188 billion in deposits in more than 19 million accounts. The RTC has resolved (liquidated, sold or otherwise put out of business) 332 of the institutions taken over (with total assets of $115 billion). However, current projections indicate that the RTC may have to take over another 500 institutions—bringing the cumulative RTC case load to approximately 1,000 thrifts. This reflects continuing deterioration in the performance of real estate loans and thrift profitability generally. The budget estimates the need for an additional $30 billion in 1991 and $33 billion in 1992 to continue resolution of insolvent thrifts.

Developing Country Debt.—The Department will begin negotiating debt restructuring agreements under the Enterprise for the Americas Initiative in 1991. These agreements are predicated on medium-term macroeconomic and structural reform programs, including measures to promote an overall economic environment that will encourage new investment and repatriation of capital. Agreements will feature the creation of trust funds for the environment, as well as debt for equity and debt for nature swaps.

Internal Revenue Service (IRS) Modernization.—IRS accomplishments in 1990 include: (1) selecting a systems architecture for the Tax Systems Modernization (TSM) that will decentralize many of the processing functions currently performed at IRS central computing centers to the ten service centers; (2) beginning nationwide implementation of an online system to verify key pieces of taxpayer identification data; (3) completing key aspects of a system to automate the process of identifying taxpayers that underreport earned and unearned income; and (4) drafting a Design Master Plan that outlines the IRS TSM in more detail, lays out plans for the transition from the current to the target architecture, and includes an economic analysis of the proposed investments for TSM. IRS plans to complete the latest version of the Design Master Plan in mid-1991.

Department of Veterans Affairs

The objective is to ensure that the Department of Veterans Affairs health care delivery system provides cost-effective, high-quality care to eligible veterans on an equitable basis.

Health Care.—The VA health care system has not been thoroughly reviewed in the past 25 years. Since then the demographics of the veteran population, particularly the aging veteran population, and the health care environment of new medical care technologies and delivery mechanisms, have changed dramatically. The Secretary established in April 1990 a Commission on the Future Structure of Veterans Health Care, a 15-member group of outside medical and health experts, to study and report before the end of 1991 on the VA medical care program. Particular attention will be paid to the health and medical care needs of veterans in the year 2010.

Environmental Protection Agency

EPA's objectives are: (1) to achieve enactment of the President's Clean Air Act and implement the legislation in the most cost-effective manner possible; (2) to reinvigorate the Superfund program by aggressively enforcing against those responsible for creating hazardous waste sites and by moving more quickly to address serious threats requiring immediate attention; (3) to maintain U.S. leadership in addressing global environmental issues; and (4) to promote pollution prevention within both the public and private sectors.

Clean Air Act.—The President signed in November 1990 Clean Air Act legislation that included: (1) provisions to bring all cities into attainment with the National Ambient Air Quality Standards; (2) an acid rain program that would achieve a permanent 10 million ton reduction in annual sulfur dioxide emissions by the year 2000; and (3) a program to reduce industrial emissions of hazardous air pollutants by 75 to 90 percent. All of these features were initially proposed by the President, as were the bill's innovative market-based approaches to cost-effective pollution control (e.g., the acid rain allowance trading system). The President has directed EPA to implement the legislation in the most cost-effective manner possible, and effective implementation of the Act remains among the Administration's high priorities.

The budget requests an increase of $117 million and 341 workyears over 1991 to implement the Clean Air Act. Combined with the increase provided last year, the budget will include a total increase of $200 million and approximately 600 workyears above 1990 levels for this purpose.

Superfund.—The Agency's increased emphasis on enforcement efforts resulted in 60 percent of 1990 remedial actions being undertaken by responsible parties, exceeding the target of 50 percent. The Agency's enforcement efforts recovered from responsible parties $105 million of costs spent from the Superfund, significantly exceeding the budget target of $82 million. EPA also gave priority to moving more quickly to address serious threats; it initiated cleanup response activities at all 23 sites on the National Priority List it identified as posing an immediate or acute threat. These actions ensure that the immediate or acute risks posed by these sites are addressed until permanent remedies are put in place. The budget proposes to strengthen further the Superfund program's relative emphasis on cleanup and enforcement, consistent with this objective.

Global Environmental Issues.—The Administration has taken a leadership role in addressing a series of international environmental issues. In 1990, it worked to strengthen the Montreal Protocol on Substances that Deplete the Ozone Layer. A total phaseout of chlorofluorocarbons (CFCs) was adopted as part of a package of amendments to the Protocol in July. As part of the Clean Air Act signed by the President in November, the U.S. enacted legislation to carry out the phaseout. In March 1990, the Administration signed the Basel Convention which governs the transboundary shipment of hazardous waste, and ensures that such shipment be agreed to by recipient countries and carried out in an environmentally sound manner. At the Houston Economic Summit, the President proposed, and the G–7 agreed, to a call for a global forest convention. Preliminary discussion on the parameters of such a convention are underway.

The U.S. has actively participated in the U.S.-sponsored Intergovernmental Panel on Climate Change (IPCC). In addition to having the world's leading global climate change research program, the U.S. took several domestic policy actions in 1990 which will have the effect of reducing greenhouse gas emissions. These include enactment of a cap on utility emissions which will induce energy efficiency, adoption of a new alternative fuels program, phaseout of CFCs, the launching of an ambitious reforestation initiative, and promulgation of energy efficiency standards.

The Administration also sought to address global environmental concerns through various bilateral efforts, particularly in Eastern Europe, Mexico, and elsewhere in Latin America.

Pollution Prevention.—The Administration worked for passage of pollution prevention legislation that requires EPA to develop a source reduction strategy to reduce industrial pollution, authorizes a State grant program to encourage States to develop source reduction strategies, and directs EPA to work to harmonize its various databases for toxic pollutants and hazardous wastes. The President signed the pollution prevention bill into law as part of the Omnibus Budget Reconciliation Act.

EPA also recently finalized a pollution prevention strategy that will target 17 industrial toxics for reductions in emissions of 33 percent by the end of 1992 and 50 percent by 1995. These reductions will be achieved through voluntary commitments by companies that choose to participate.

National Aeronautics and Space Administration

Objectives are (1) to advance U.S. scientific leadership and the world's scientific knowledge of the solar system and the universe; (2) to advance the role of man in space and preserve U.S. preeminence in critical aspects of manned space flight; and (3) to advance scientific knowledge of the Earth and its environment so as to understand and eventually predict both nature and human-induced global change and, thus provide continuing benefits to humanity.

Scientific Knowledge.—The space science program will continue to expand and provide them with rich returns of data that scientists will be studying well into the next century. In all, NASA conducted approximately 30 suborbital rocket flights and 25 balloon flights in support of space science. Despite the discovery of spherical aberration, the Hubble Space Telescope (HST) has begun unprecedented scientific work in spectroscopy, photometry, astrometry, and ultraviolet wavelength imaging not possible from the ground. The Cosmic Background Explorer (COBE) completed its survey of the entire sky, making unprecedented measurements of background radiation. The joint German/NASA Roentgen Satellite (ROSAT) was launched, and astronomers used the ultraviolet telescopes and the Broad-Band X–Ray Telescope aboard the Space Shuttle Columbia to study the high energy Universe. Magellan and Galileo, NASA's planetary missions launched in 1989, were returning data by the end of 1990. The Ulysses spacecraft is on its way to study the poles of the Sun.

Planetary missions from the past continued to transmit important scientific data. Voyager 1 turned its camera toward the Sun and took a "family portrait" of six of the nine planets in our solar system, the first time such a perspective has ever been seen. Pioneer 11 left the solar system for interstellar space, while Pioneer 10 set a distance record by passing 4.6 billion miles from Earth. The Combined Release and Radiation Effects Satellite (CRRES) was launched to study the Earth's magnetic fields and ionized gases that travel through them.

Man in Space.—The importance of having man in space was endorsed by the report of the Advisory Committee on the Future of the Space Program (the Augustine Committee). NASA is now in the process of implementing a system to respond to various recommendations of the Committee.

The Augustine Committee recommended development of an unmanned but *man-rated* heavy launch vehicle to help meet long term space transportation needs. Funds for the development of such a system are included in the budget. Space Station Freedom is now undergoing a restructuring which will be completed in early 1991. A revised program schedule and budget baseline will be established. The detailed design phase will begin at the completion of this restructuring activity. NASA is also pursuing the President's objective of manned exploration of Mars through various technology programs. A dramatic increase for this Space Exploration Initiative (SEI) is proposed in the budget.

Six Space Shuttle missions were launched during the year. In the 26 months since the first post-Challenger launch, 13 shuttle flights have occurred—an average of one flight every two months. NASA's commitment to safety is exemplified by its decision in midyear to ground the Space Shuttle fleet pending understanding of hydrogen leaks discovered separately in two orbiters. The sources of the leaks were determined, repairs were made, and all vehicles were successfully launched before the end of the year. In addition, the Space Shuttle Main Engine project has identified limitations of the current engines and is implementing a structured plan to aggressively pursue engine enhancement aggressively.

Mission to Planet Earth (Global Change).—NASA is actively coordinating its program with other Federal agencies through the Committee on Earth and Environmental Science (CEES) of the Federal Coordinating Council on Science Engineering, and Technology.

Mission to Plant Earth (MTPE) is part of an interagency effort to improve our understanding and predictive capability of the earth's environment. MTPE consists of the Earth Observing System (EOS), Earth Probes, and a series of EOS-precursor missions. The EOS-precursors are a variety of satellites, aircraft, balloon, and research programs that will be flown or undertaken over the next several years. These include the Upper Atmosphere Research Satellite to be launched in 1991 and TOPEX/Poseidon to be launched in 1992. In between the precursors and EOS, a series of small, simple, and relatively inexpensive satellites, known as Earth Probes, will be launched. These will include data collection on global ozone (TOMS), ocean surface measurements (NSCAT), and tropical rainfall measurements (TRMM). There will be five Earth Probe missions between 1993 and 1997.

GOVERNMENTWIDE OBJECTIVES

Adult Literacy

The objective is to increase adult literacy through individual and cooperative program activities of Federal agencies and in coordination with State and local officials and the private and volunteer sectors. Improved literacy is the fifth national education goal.

Adult Education Programs.—The Departments of Education, Labor, and Health and Human Services jointly funded a Study of Federal Funding Sources and Services for Adult Education. An interim report was submitted to Congress in November 1990; it described all Federal programs that provide support for adult education, including those that may include basic skills training as a program component. A second report (due in April 1991) will describe five State and local programs that are exemplary in coordinating Federal and State adult education funding.

The Administration established in March 1990 an interagency Task Force on Literacy to coordinate Federal activities in this area. Chaired by Assistant Secretaries from the Departments of Education and Labor, the Task Force reports to the Domestic Policy Council and includes representatives from every Federal agency with programs or activities related to adult literacy. In addition, the Department of Education has contracted with the Educational Testing Service to develop and conduct the first survey of the literacy skills in a nationally representative sample of adults. Results from this assessment will be available in early 1993.

Building on the work done in the Task Force, the 1992 budget proposes (1) increased funds for adult education services; and (2) in the revised Educational Excellence Act, additional authorities to help achieve the national goal in literacy.

Credit and Cash Management

The objective is to protect the value of Federal credit and cash assets through (1) sound budget presentation; (2) cost-effective management; and (3) aggressive collection of delinquent debt.

Sound Budget Presentation.—The Omnibus Budget Reconciliation Act of 1990 requires Federal credit agencies to estimate and seek appropriations to cover the subsidy costs of all Federal direct loans and loan guarantees in 1992 and future years. This will ensure that the true costs of credit programs are reflected in the budget.

Cost-effective Credit Management.—In November 1990, OMB issued "Guidance for Management of Guaranteed Loans," prescribing policies and procedures for Federal guaranteed loan program management. The policy sets standards for lender eligibility and monitoring, guaranteed loan origination and servicing, and asset management and disposition.

Cash Management.—The Food, Agriculture, Conservation and Trade Act of 1990 requires electronic benefit transfer (EBT) standards for the Food Stamp program by April 1992. The Cash Management Improvement Act of 1990 requires standards for payment of interest by October 1992 when the Federal Government does not provide, or the States do not disburse, Federal funds in a timely manner. Three EBT demonstration projects were initiated in 1990 to test the delivery of benefits to the unbanked by plastic access cards at automated teller machines and point-of-sale terminals.

Collection of Tax Debt.—The budget includes $47 million for the second year of a 3-year tax collection initiative to slow the growth in tax debt. The additional 799 collection personnel hired in 1991 and the 922 budgeted in 1992 should increase collections by $700 million between 1991 and 1993. The IRS and OMB will develop a management improvement program to increase collections even further.

Collection of Non-Tax Debt.—The budget also requests an additional $63 million to provide for the acceleration of collections of non-tax debt and improved management controls. Enactment in November 1990 of the Federal Debt Collection Procedures Act provides the Department of Justice, for the first time, uniform Federal procedures for enforcement of judgments to collect Federal debt. The IRS is also studying the feasibility of offsetting tax refunds to businesses with delinquent Federal debt. So far, the study has identified for potential tax refund offset $700 million in delinquent Federal debt owed by businesses.

Drug Control

Objectives are (1) to develop a National Drug Control Strategy; (2) to reduce the supply of illegal drugs; and (3) to reduce the demand for illegal drugs.

National Drug Control Strategy.—The Administration has prepared a National Drug Control Strategy (the first strategy in September 1989, the second in January 1990, and the third in February 1991). The Strategy sets goals for (1) the reduction of current and frequent drug use (as measured by the National Institute on Drug Abuse's Household Survey and the High School Senior Survey); (2) changes in student's attitudes toward drug use (as measured by the High School Senior Survey); (3) decreases in the number of drug-related medical emergencies (as measured by the Drug Abuse Warning Network); and (4) reduced drug availability and production. It also includes provision for substantial Federal funding increases, more stringent law enforcement efforts, interdiction of drugs coming across our borders, and prevention and treatment efforts. The budget requests $11.7 billion in 1992, a $1.1 billion increase over 1991.

Reduced Demand.—Drug use has in recent years declined. The 1989 National Household Survey shows that the number of people who reported current cocaine use declined by 72 percent in the last 5 years (from 5.8 million in 1985 to 1.6 million in 1990). The National High School Senior Survey's data show a decline in the number of adolescents reporting current cocaine use (from a peak of 6.7 percent in 1985 to 2.8 percent in 1989). Reported marijuana use continues its steady drop (from a peak of 37 percent in 1979 to 17 percent in 1989). At the same time, the percentage of high school seniors who report that they disapprove of individuals who use illicit drugs continues to rise. The budget requests an increase of 8 percent over 1991, or a total of $3.2 billion, for drug treatment and prevention activities. These resources include continued expansion of prevention efforts and a new treatment capacity expansion initiative. Almost $500 million is requested for drug control research.

Reduced Supply.—In February 1990, the United States signed the Document of Cartagena, establishing drug control cooperation with Peru, Bolivia and Colombia. Although worldwide production of all illicit drugs has increased, there are signs of progress. According to the Drug Enforcement Administration (DEA), cocaine prices at the wholesale level have been rising nationwide for about a year. For example, in New York and Los Angeles, wholesale cocaine prices have jumped by more than 40 percent since December of 1989. In addition, the purity of cocaine sold at the wholesale level has been falling since late 1988. At the retail level, prices have not increased measurably, but drug purity has decreased. This has the effect of raising the price, since addicts have to buy more cocaine to attain the same "high."

The budget requests a total of $8.0 billion for international, interdiction, and other drug law enforcement activities, a 12 percent increase over 1991. These resources include expansion of the interagency task forces, continuation of the President's Andean Strategy, and improved interdiction efforts.

Government Management and Integrity

The objective is to improve the delivery of programs for the public and Federal stewardship over public resources. This objective has three parts: (1) improved financial management; (2) enhancement of senior management's decisionmaking and oversight capacity through the development of quality data bases which integrate budget and accounting data and program results; and (3) increased priority for internal controls under the Federal Managers' Financial Integrity Act (FMFIA) and audit follow-up under the Inspector General Act Amendments of 1988.

Financial Management.—OMB established a Five Point Program in 1990 to address each of the primary requirements of quality financial management: accounting standards; system and information standards; agency system development; integration of agency and central systems; and financial reporting.

In October 1990, OMB, Treasury and the General Accounting Office established a Federal Accounting Standards Advisory Board to develop needed accounting standards. Progress was made in defining governmentwide financial systems and information standards through the release of personnel/payroll and travel system standards and the ongoing identification and definition of governmentwide data standards. Reviews of the financial management systems of five major agencies were conducted. Automated governmentwide budget execution information will be produced in February 1991, for the first time, through the electronic linkage of agency and central systems. An initiative was begun to produce annual audited financial statements to improve disclosure of the Government's financial condition and the quality of financial data. In addition, the National Defense Authorization Act established in November 1990 new procedures for closing expired accounts to assure better control and accountability of Federal funds.

The Chief Financial Officers Act of 1990 enhanced these improvement efforts by requiring the appointment of a chief financial officer in each major agency and a Deputy Director for Management and a Controller within OMB. The Act also required the selected production and audit of annual financial statements and prescribed other important planning and reporting requirements.

Information Systems.—An important part of this objective is to build upon improved financial systems as a base to meet broader information needs. Annual financial statements required by the Chief Financial Officers Act will initially report primarily financial information, but will be expanded in phases to report associated programmatic information (including performance measures). Initial reporting requirements for financial statements are being developed with the advice of the President's Council on Management Improvement, the President's Council on Integrity and Efficiency and the Chief Financial Officers Council; decisions are expected by April 1991. A task force of the President's Council on Management Improvement is complementing this effort by surveying agency managers to identify management information requirements to guide the development of general management reports and associated data bases.

Internal Controls and Audit Followup.—The FMFIA program has been strengthened in 1990. FMFIA implementation has been made the personal responsibility of agency Deputies. OMB established the High Risk List and required agencies to report, in July 1990, on their plans for, and progress in, correcting their high risk areas. In assessing the agency reports, OMB found that, in most areas, agencies were making good progress and had active efforts underway to improve programs and operations. In addition, OMB established special teams to move forward in reducing risk in selected areas. These teams have actively worked with agency management in 1990 to help correct problems in the Railroad Retirement Board (RRB), the Internal Revenue Service (IRS) and the Department of Education student loan program. In January 1991, OMB initiated, in concert with the Department of the Interior, a review of the Bureau of Indian Affairs (BIA) financial management system.

International Trade and Export Development

Objectives are (1) to improve the U.S. trade position through securing freer and fairer trading conditions in international negotiations; and (2) to define, articulate, and implement the U.S. Government's role in export development.

Free and Fair Trade.—The United States Trade Representative (USTR) has sought to open world markets and liberalize trade through the Uruquay Round of multilateral trade negotiations and through the active pursuit and implementation of regional and bilateral initiatives (e.g., the U.S.-Canada Free Trade Agreement).

Multilateral.—The Uruguay Round is a multi-year set of negotiations under the auspices of the General Agreement on Tariffs and Trade (GATT) to liberalize trade in goods and services. It is expected that negotiations on the Uruguay Round will resume in February if, as the United States assumes, the European Community adjusts its position on agriculture.

Regional and Bilateral.—USTR has coordinated with the Canadian government to use the U.S. Canada Free Trade Agreement's (FTA) U.S.-Canada Commission to expand trade liberalization. The Administration has launched a Structural Impediments Initiative (SII) with Japan to address such impediments as rigidities in the Japanese distribution system and pricing mechanisms. In addition to the Enterprise for the Americas Initiative, with its goal of hemispheric free trade, the Administration has initiated a Framework approach with Mexico which includes the negotiation of an accelerated Uruquay Round package and the initiation of bilateral trade and investment facilitation talks. The 1990 ASEAN-U.S. Initiative is examining the current state of, and possible new frameworks for, trade and investment relationships with the six ASEAN member countries.

Sectoral initiatives have been launched in both steel and shipbuilding. Trade liberalization priorities were identified in May 1990 under the "Super and Special 301" provisions of the Trade Act, and bilateral negotiations in these respects will be conducted over the next 12 to 18 months concerning trade-distorting practices and outstanding intellectual property issues.

Export Promotion.—The Department of Commerce is drafting a policy statement describing the role of the U.S. Government in export development. The proposed policy will be reviewed by all Federal agencies with export development responsibility and, subsequently, by representatives of the States and other agencies and organizations with which the Federal Government shares export-related commitments. New areas of attention will include European Community integration in 1992, the U.S.-Canada Free Trade Agreement, the Uruguay Round negotiations, continued efforts to open up Japanese markets, and planning to increase the involvement of "multipliers" in export development activities.

The Public Service

The objective is to improve the quality and image of the Federal civil service through more effective recruitment, retention, development, performance evaluation, and compensation practices.

Pay and Evaluation.—Federal pay systems were reformed through passage of the Federal Employees Pay Comparability Act of 1990 (Pay Act) in November 1990. The Act provides for locality-based pay differentials, recruitment and retention incentives, and other provisions leading to closing the gap between Federal and private sector pay practices. Earlier enacted legislation provided for increased senior-level pay. A Pay-for-Performance Labor-Management Committee, called for in the new pay legislation, will advise the Office of Personnel Management (OPM) on the design of systems to strengthen the linkage between performance and pay. The National Academy of Sciences has concluded research on performance appraisal methodologies for OPM.

Recruitment and Retention.—OPM has introduced a new examination program for entry into more than 100 key administrative and white-collar occupations. The "Administrative Careers With America" staffing system was initiated in 1990. It is targeted to enhance the recruitment of talented new college graduates in 100 occupations. In addition, OPM published a comprehensive "Federal Career Directory" and inaugurated public service recognition celebrations and Job Fairs. The Pay Act also provides new flexiblities which will help recruitment, retention, and performance.

Federal Health Benefits.—OPM transmitted an outline for Federal Employees Health Benefits (FEHB) reform to Congress in March 1990. Several Administration initiatives to enhance program operations were enacted in the Omnibus Budget Reconciliation Act of 1990. These included hospital cost containment measures, improved coordination with Medicare, application of Medicare payment limits to certain services provided retirees, improved cash management, and exemption of FEHB carriers from State premium taxes. The Administration is currently studying options for more comprehensive reform.

Research and Development

Objectives are (1) to develop a long-range R&D investment policy; (2) to encourage private investment in R&D; (3) to increase the supply of engineers and scientists through appropriate Federal actions and to coordinate Federal strategies for science education in order to assure a technologically literate workforce; and (4) to manage direct Federal investments in R&D more effectively.

Long Range R&D Investment Policy.—The President's Science Advisor and the Office of Science and Technology Policy (OSTP) coordinated the development of a U.S. Technology Policy in September 1990, to help guide future investments in the area of applied civilian R&D. In addition, the Federal Coordinating Council on Science, Engineering, and Technology (FCCSET), working with OMB, has developed long-term research strategies and plans in the areas of global change research, high performance computing and communications, and math and science education.

Private Sector Investment in R&D.—The budget proposes to make the 20 percent research and experimentation (R&E) tax credit permanent by allowing 100 percent of total research expenses to be used for the computation of the credit for all years after December 31, 1989. The budget proposes a 1-year extension of the rules, as modified by the Omnibus Budget Reconciliation Act of 1990, for the allocation of foreign and domestic R&E expenditures for companies with foreign operations. The proposal would also allow 100 percent of U.S. expenditures to be covered, rather than the current 75 percent.

Supply of Engineers and Scientists.—Through the FCCSET's Committee on Education and Human Resources, a plan was developed to coordinate Federal efforts and focus Federal activities in the areas of (1) precollege teacher enhancement and preparation; (2) precollege curriculum development, R&D in teaching and learning, dissemination, and technical assistance; (3) organization reform, system operation, and comprehensive reform; and (4) student incentives and opportunities.

Management of Federal R&D.—The Office of Science and Technology Policy has coordinated the development of a framework to assist in working towards these MBO objectives. Further, the President has appointed the members of the President's Council of Advisors on Science and Technology, and FCCSET has been established to coordinate Federal research and development programs that involve more than one agency. Such coordination allows for better management of Federal R&D and more effective use of Federal R&D investments. Committees and work groups of the FCCSET have developed plans for global change research, mathematics and science education, and high performance computing.

PART THREE

RECEIPTS

X. RECEIPTS, USER FEES, AND OTHER COLLECTIONS

X. RECEIPTS, USER FEES, AND OTHER COLLECTIONS

GOVERNMENTAL RECEIPTS

eceipts (budget and off-budget) are taxes and other ections from the public that result from the exercise of the Government's sovereign or governmental powers. The difference between receipts and outlays determines the surplus or deficit.

Table X–1. **RECEIPTS BY SOURCE**

(In billions of dollars)

Source	1990 actual	Estimate					
		1991	1992	1993	1994	1995	1996
Individual income taxes	466.9	492.6	529.5	572.0	632.9	688.9	742.1
Corporation income taxes	93.5	95.9	101.9	109.0	120.6	130.0	138.3
Social insurance taxes and contributions	380.0	402.0	429.4	463.8	501.0	534.1	568.5
On-budget	(98.4)	(103.7)	(114.1)	(125.1)	(135.5)	(144.2)	(151.3)
Off-budget	(281.7)	(298.3)	(315.3)	(338.7)	(365.5)	(389.8)	(417.2)
Excise taxes	35.3	44.8	47.8	50.1	52.0	53.6	47.8
Estate and gift taxes	11.5	12.2	13.3	14.1	13.7	14.6	15.7
Customs duties and fees	16.7	17.7	19.3	20.8	22.0	22.7	23.9
Miscellaneous receipts	27.3	26.2	23.9	22.8	23.2	23.5	24.5
Total receipts	**1,031.3**	**1,091.4**	**1,165.0**	**1,252.7**	**1,365.3**	**1,467.3**	**1,560.7**
On-budget	*(749.7)*	*(793.2)*	*(849.8)*	*(914.0)*	*(999.8)*	*(1,077.5)*	*(1,143.5)*
Off-budget	*(281.7)*	*(298.3)*	*(315.3)*	*(338.7)*	*(365.5)*	*(389.8)*	*(417.2)*

rowth in receipts.—Total receipts in 1992 are esti- ted to be $1,165.0 billion, an increase of $73.6 billion 6.7 percent from the $1,091.4 billion estimated for 1. Receipts are projected to grow at a much higher rage annual rate of 7.6 percent between 1992 and 6, to $1,560.7 billion. Because the rate of growth receipts in 1992 exceeds the rate of growth of GNP, receipts share of GNP is projected to rise from 19.4 percent in 1991 to 19.5 percent in 1992. The rate of growth of receipts exceeds the rate of growth of GNP in subsequent years, causing the receipts share of GNP to rise to 20.0 percent in 1996. This is well above the average receipts shares of GNP of 18.3 percent and 19.0 percent realized in the 1970s and 1980s, respectively.

ese estimates assume a social security taxable earnings base of $51,300 through 1996.

cludes the effect of medicare (HI) base changes shown below.

ese estimates include both the direct and indirect effects of administrative and legislative changes.

Composition of receipts.—The Federal tax system will rely predominantly on income and payroll taxes in 1992, with these sources accounting for 82.2 percent of receipts. The Federal tax system will continue to rely predominantly on these sources of receipts in 1996, when their combined share will rise to 83.7 percent.

ENACTED LEGISLATION

The Omnibus Budget Reconciliation Act of 1990.—This Act, which is the largest deficit reduction package in history, is an important measure for ensuring America's long-term economic growth. It was the result of long, hard work by the Administration and the Congress. Less than 30 percent of its deficit reductions were achieved through revenue increases. The major revenue provisions of the Act are described below:

Individual Income Tax Provisions

Modify individual income tax rates.—Two statutory tax brackets and tax rates—15 percent and 28 percent—were in effect under prior law. However, the benefit of the 15 percent bracket was phased out for taxpayers with taxable income exceeding specified levels, implicitly creating a marginal tax rate of 33 percent in the affected income range. Effective January 1, 1991, the phaseout of the benefit of the 15 percent bracket is repealed and a third statutory tax rate of 31 percent is imposed on taxable income greater than or equal to the level at which the phaseout of prior law began.

Limit itemized deductions.—Effective January 1, 1991, otherwise allowable deductions (with the exception of medical expenses, casualty and theft losses, and investment interest), are reduced for taxpayers with adjusted gross income in excess of $100,000. The reduction is equal to three percent of the taxpayer's adjusted gross income in excess of $100,000; however, a taxpayer's deductions may not be reduced by more than 80 percent.

Phase out personal exemptions.—The deduction for personal exemptions is phased out as the taxpayer's adjusted gross income exceeds threshold amounts. For 1991, the threshold amounts are $150,000 for taxpayers filing a joint return, $125,000 for a head of household, $100,000 for a single taxpayer, and $75,000 for a married taxpayer filing a separate return; these amounts are indexed for inflation beginning in 1992. Each otherwise allowable exemption is reduced by two percent for each $2,500 (or fraction thereof) that the taxpayer's adjusted gross income exceeds the threshold amount.

Earned Income Tax Credit

Modify and expand earned income tax credit (EITC).—Certain individuals who maintain a home for one or more children are allowed an advance refundable tax credit based on the taxpayer's earned income. Under prior law, the earned income tax credit (EITC) for 1990 was equal to 14 percent of the first $6,810 of earned income, for a maximum credit of $953. The credit was phased out at a rate of 10 percent of the amount by which adjusted gross income in 1990 exceeded $10,730. Effective for taxable years beginning after December 31, 1990, the rate of the credit is increased, an adjustment is provided for family size, and the phaseout rates are modified as follows:

	Credit percentage	[illegible]
1991:		
1 qualifying child	16.7	[illegible]
2 or more qualifying children	17.3	[illegible]
1992:		
1 qualifying child	17.6	[illegible]
2 or more qualifying children	18.4	[illegible]
1993:		
1 qualifying child	18.5	[illegible]
2 or more qualifying children	19.5	[illegible]
1994 and thereafter:		
1 qualifying child	23.0	[illegible]
2 or more qualifying children	25.0	[illegible]

The prior law dollar thresholds, indexed for inflation, are retained. In addition, the eligibility rules are modified.

Establish supplemental credit for young children.—An additional credit is provided for qualifying children under the age of 1, as of the close of the taxable year of the taxpayer. The maximum credit for 1991 is $355.

Establish supplemental credit for certain health insurance premium expenses.—Effective for taxable years beginning after December 31, 1990, a credit is available to taxpayers for qualified health insurance expenses that include coverage for a qualifying child. The eligibility criteria, income and phaseout requirements are the same as those for the EITC. However, the credit percentage is 6.0 percent of earned income and the phaseout rate is 4.285 percent. For 1991, the maximum credit is $428.

Excise Tax Provisions

Increase excise taxes on distilled spirits, beer and wine.—Excise taxes on distilled spirits are increased by $1.00 to $13.50 per proof gallon effective January 1, 1991. Excise taxes on beer generally are doubled on that date from $9.00 to $18.00 per barrel. Wine, which generally had been taxed at rates ranging from $0.17 to $2.40 per wine gallon prior to January 1, 1991, is now taxed at rates ranging from $1.07 to $3.30 per wine gallon.

Increase tobacco excise taxes.—Excise taxes on all tobacco products, including cigarettes, cigars, chewing tobacco, snuff, and pipe tobacco, are increased by 50 percent relative to prior law. The first increase, equal to 25 percent of prior law, is effective January 1, 1991. The second increase, equal in dollar amount to the first increase, will be effective January 1, 1993. Specifically, the excise tax on small cigarettes is increased from $.16 per pack to $.20 per pack on January 1, 1991 and will be increased to $.24 per pack on January 1, 1993.

Expand excise tax on ozone depleting chemicals.—The prior law fee imposed on certain ozone-depleting chemicals is expanded to apply to additional chemicals including carbon tetrachloride and methyl chloroform effective January 1, 1991. The amount of the fee is determined by multiplying a base fee amount by a factor—rang from 0.1 to 10.0—that represents the ozone-depleting potential of the chemical. The base fee per pound applicable to chemicals taxed under prior law is $1.37 for calendar year 1991, $1.67 for calendar year 1992, and $2.65 for calendar years 1993 and 1994. Thereafter, the base fee increases by $.45 per pound per year. The base fee per pound is phased in for newly taxed chemicals, equaling $1.37 for 1991 and 1992, $1.67 for 1993, $3.00 for 1994, and $3.10 for 1995. Thereafter, the base fee increases by $0.45 per pound as it does for chemicals taxed under prior law.

Increase highway and motor boat fuels excise taxes.—The prior law excise taxes imposed on gasoline and special motor fuels used in highway transportation and motor boats are increased from $.09 per gallon to $.14 per gallon effective December 1, 1990. On that date the prior law excise tax on diesel fuel used in highway transportation is increased by $.05 per gallon to $.20 per gallon and a $.025 per gallon tax is imposed on fuels used in rail transportation. The Act specifies that one-half of the increases in highway fuels taxes and motor boat fuels taxes be deposited in the Highway Trust Fund and the Aquatic Resources Trust Fund, respectively; the remaining half of the increases are to be deposited in the General Fund of the Treasury. The tax imposed on fuels used in rail transportation is also to be deposited in the General Fund.

Increase Airport and Airway Trust Fund taxes.—Excise taxes deposited in the airport and airway trust fund were scheduled to expire after December 31, 1990 under prior law. This Act extends these taxes through December 31, 1995, but also increases the tax on air passengers from 8 percent to 10 percent, increases the tax on airfreight from 5 percent to 6.25 percent, increases the tax on noncommercial aviation gasoline from $.12 per gallon to $.15 per gallon, and increases the tax on noncommercial aviation jet fuel from $.14 per gallon to $.175 per gallon. In addition, the Act specifies that all revenue from the increases in aviation gasoline and fuel excise taxes relative to prior law rates go to the General Fund of the Treasury through 1992, and to the Airport and Airway Trust Fund for 1993–1995.

Increase ad valorem fee on shippers.—The prior law ad valorem fee on shippers is increased from 0.04 percent of cargo value to 0.125 percent of cargo value effective January 1, 1991.

Reauthorize Leaking Underground Storage Tank (LUST) Trust Fund tax.—Prior to September 1, 1990, a tax of $.001 per gallon was imposed on gasoline, diesel fuel, special motor fuels, aviation fuel and fuels used on inland waterways, and deposited in the LUST Trust Fund. This tax terminated on August 31, 1990 after the Fund reached a statutory ceiling of $500 million of net revenue. This Act reimposes the tax through December 31, 1995.

Reauthorize Hazardous Substance Superfund Trust Fund taxes.—The taxes authorized to be deposited in the Hazardous Substance Superfund were scheduled to expire on December 31, 1991 under prior law. This Act extends these taxes through December 31, 1995. Superfund financing is derived from a tax of $.082 per barrel on domestic crude oil and $.117 per barrel on imported petroleum products, a tax on domestic feedstock chemicals and imported chemical derivatives, and an environmental tax on corporate taxable income.

Increase gas guzzler excise tax.—The prior law tax imposed on the manufacturer or importer of automobiles that do not meet statutory standards for fuel economy is doubled effective January 1, 1991. The Act repeals the prior law exemption provided for stretch limousines, as well as the special rules permitting the Secretary of the Treasury to set the rate of tax for small manufacturers.

Extend and modify collection of telephone excise tax.—The 3 percent excise tax imposed on local and toll telephone service, and on teletypewriter exchange service, which was scheduled to expire after December 31, 1990, is permanently extended. In addition, the collection period of telephone excise taxes is modified, effective for taxes considered collected for semi-monthly periods beginning after December 31, 1990.

Impose excise tax on certain luxury goods.—Effective January 1, 1991 through December 31, 1999, an excise tax, equal to 10 percent of the retail price in excess of specified thresholds, is levied on the following items: automobiles above $30,000, boats and yachts above $100,000, aircraft above $250,000, and furs and jewelry above $10,000. Boats, yachts, aircraft, and passenger cars used exclusively in a trade or business or for the purpose of transporting persons or property for compensation or hire generally are exempt from the tax.

Expiring Tax Provisions

Extend research and experimentation (R&E) allocation rules.—The rules for allocating R&E expenses to U.S. or foreign source income are extended for an additional 15 months so that they apply to taxable years beginning on or before August 1, 1991.

Extend research and experimentation (R&E) tax credit.—The tax credit provided for certain incremental research and experimentation expenditures, which was scheduled to expire on December 31, 1990, is extended for 1 year. In addition, the special rule to prorate research expenditures incurred during 1990 is repealed.

Extend exclusion for employer-provided educational assistance.—The exclusion for employer-provided educational assistance is extended to apply to amounts paid by an employer on or before December 31, 1991. In addition, the restriction on graduate level courses is repealed, effective for taxable years beginning after December 31, 1990.

Extend low-income housing tax credit.—The low income housing tax credit, which was scheduled to expire after December 31, 1990, is extended for one year through December 31, 1991, with several modifications.

Extend abandoned mine reclamation fees.—The abandoned mine reclamation fees, which were scheduled to expire in August 1992, are extended through September 30, 1995.

Extend IRS user fee.—The prior law fee on each request for a letter ruling, determination letter, opinion letter, or other similar ruling or determination filed after January 31, 1988 and before October 1, 1990, is extended through September 30, 1995.

Tax Incentive Provisions

Initiate energy incentives.—The Act includes several incentives to encourage the finding of new oil and gas fields and the reclaiming of old fields. These incentives include the following: a 2 year extension of the nonconventional fuels tax credit and an expansion of the definition of qualifying gas produced from a tight sands formation; the initiation of a new income tax credit for ethanol production, modification of existing credits for ethanol fuels and ethanol fuels mixtures, and modification of the tariff on ethanol; initiation of a new income tax credit for qualified enhanced oil recovery costs; modification of percentage depletion rules; and the provision of alternative minimum tax relief for oil and gas operations.

Initiate small business incentives.—Several incentives designed to assist small business are provided in the Act. These incentives include the following: a revision of estate freeze rules, generally effective for transfers made and agreements entered into after October 8, 1990; and modification of the treatment of certain expenditures incurred to make businesses accessible to disabled individuals.

Insurance Company Provisions

Amortize policy acquisition expenses of insurance companies.—Under prior law, insurance companies generally were allowed to deduct life insurance policy acquisition expenses (commissions and other selling expenses) in the year in which they were incurred. In the case of reinsurance, however, the reinsuring company was required to capitalize commissions and to amortize them over the useful life of the asset rather than permitting a current deduction for such an expense. Effective after September 30, 1990, insurance companies are required to amortize life insurance policy acquisition expenses on a straight-line basis over a period of 120 months beginning with the first month in the second half of the taxable year. For any given taxable year, policy acquisition expenses required to be capitalized and amortized are determined to be a specific percentage of the net premiums, depending on the type of insurance contract. Three separate categories of insurance contracts, and, therefore, three separate percentages, are identified. A special rule is provided for certain reinsurance transactions. In addition, the tax treatment of acquisition expenses incurred on property and casualty insurance policies sold by life insurance companies now conforms with the tax treatment of these expenses for property and casualty insurance companies.

Include salvage values in calculation of loss deductions by insurance companies.—Under prior law a property and casualty insurance company could deduct losses incurred during a year, but need not include salvage values of losses paid in its calculation of deductions for losses incurred. The salvage values need not be included if a State did not allow the company to claim the salvage values as assets for statutory purposes. The Act requires insurance companies to include salvage values in their calculations of loss incurred, regardless of how States treat salvage values. As a transition rule, salvage values are to be included in the calculation of the deduction for losses incurred as if these values had been included in such calculations in all prior tax years.

Employment Tax Provisions

Increase dollar limitation on amount of wages and self-employment income subject to the medicare (HI) hospital insurance payroll tax.—Effective January 1, 1991, the cap on wages and self-employment income considered in calculating HI tax liability is increased to $125,000. This cap is indexed annually thereafter to changes in the average wage.

Extend social security (OASDI) and medicare (HI) coverage to State and local government employees not participating in a public employee retirement system.—Mandatory social security and medicare coverage is extended to all State and local government employees not participating in a public employee retirement system in conjunction with their current State and local employment. Coverage applies with respect to all wages earned with respect to services performed on or after June 30, 1991.

Extend Federal Unemployment Act (FUTA) surtax.—The temporary unemployment surtax of 0.2 percent imposed on employers, which was scheduled to expire with respect to wages paid after December 31, 1990, is extended for 5 years through December 31, 1995.

Stabilize payroll tax law.—Effective for deposits made after July 31, 1990, employers holding withheld liability greater than or equal to $100,000 were required to deposit that amount by the close of the "applicable banking day" following the day on which the withheld amount reached $100,000. For calendar years 1990, 1993 and 1994 the applicable banking day was the first, for calendar year 1991 it was the second, and for calendar year 1992 it was the third. Under this Act, effective for calendar year 1991 and succeeding years, deposits equal to or greater than $100,000 must be made by the close of the next banking day.

Internal Revenue Service (IRS) Initiatives

Increase IRS enforcement funding and initiate management reforms.—To close the gap between taxes owed and taxes paid, additional funding is provided to IRS. These funds are to be used to collect delinquent tax debt, enhance tax document matching to detect underreporting of income and improper dependent claims, audit mortgage interest deductions, and increase the audit workforce. In addition, improvements in the management of tax law enforcement resources will increase revenue yields without requiring additional expenditures. These initiatives are expected to increase receipts $10.2 billion over the 1991–1995 period.

Miscellaneous Provisions

Modify rules relating to interest paid by corporations the IRS on tax obligations.—Under prior law, the terest rate charged corporations on the underpayment f tax was equal to the short-term Federal rate plus percentage points. Effective for purposes of determing interest for periods after December 31, 1990, rerdless of the taxable period to which the underlying x may relate, the rate is increased to the Federal e plus 5 percentage points.

Extend statute of limitations for collection of taxes.—nder prior law, the IRS was required to institute col-ion proceedings within 6 years after an assessment f tax had been made. This Act extends the statute limitations to 10 years.

Increase the maximum allowable civil penalties for olations of labor laws.—In an effort to provide effec-ve civil penalties, the maximum allowable civil pen-ties for violations of the Occupational Safety and ealth Act are increased seven fold. These fines had t been increased since they were enacted in 1970. he maximum allowable civil penalties for violations f the Federal Mine Safety Act, which had not been creased in 21 years, are increased five fold. In addi-n, the Fair Labor Standards Act is amended to create civil penalty ceiling of $10,000 for each violation of ne of the provisions relating to child labor.

Permit limited use of excess pension funds to pay cur-nt retiree health benefits and modify treatment of em-oyer reversions.—The transfer of excess pension plan ssets to pay current retiree health benefits is allowed, ffective for transfers occurring in taxable years begin-ing after December 31, 1990 and before January 1, 996. The prior law excise tax on any assets that revert the employer upon plan termination is increased om 15 percent to 20 percent if the employer estab-shes a qualified replacement plan, or to 50 percent f no replacement plan is established. The higher excise tax is applicable to reversions occurring after September 30, 1990.

RECEIPTS PROPOSALS

Enhance long-term investment.—Long-term investment would be enhanced through expansion of a capital gains differential. Specifically, when fully phased in in 1993, gains from all capital assets held by individuals (other than collectibles) would qualify for an exclusion of 30 percent if held for more than 3 years, 20 percent if held for more than 2 years, and 10 percent if held for more than 1 year. During the balance of 1991, such assets held for more than 1 year would qualify for an exclusion of 30 percent; during 1992, such assets would qualify for an exclusion of 30 percent if held for more than 2 years and 20 percent if held for more than 1 year. Where such exclusions apply, the capital gains rate otherwise applicable will apply to the gain reduced by the exclusion. For example, gains eligible for a 30 percent exclusion of a taxpayer subject to a 28 percent capital gains rate will in effect be taxed at a rate of 19.6 percent. The alternative minimum tax would be applicable to the excluded amounts and assets would be subject to depreciation recapture at ordinary rates. The proposal to enhance long-term investment is shown in Table X–4 and in tables in Part Five as estimated by the Treasury Department's Office of Tax Analysis (OTA). Because the methodological differences among OTA, Congressional estimators, and outside experts have not yet been resolved, totals are presented with the Administration's estimate and with a zero (neutral) entry for this proposal.

Extend medicare hospital insurance (HI) coverage to all State and local government employees.—A minority of the State and local government employees who were hired prior to April 1, 1986 may not be assured of medicare coverage. Because of eligibility through their spouse or short periods of work in covered employment, as many as four out of five State and local employees

*$50 million or less.

[1] These estimates are based on the direct effect only of legislative changes at a given level of economic activity. Indirect effects on the economy are taken into account in forecasting incomes, ever and in this way affect the receipts estimates by major source and in total.

who contribute nothing to medicare in their current employment are entitled to the full range of medicare benefits. Coverage of these employees, who are the only major group of employees not assured medicare coverage, would correct an inequity in coverage and eliminate this drain on the medicare trust fund. The change is proposed to be effective January 1, 1992.

Improve retail compliance with alcohol special occupational taxes.—To increase compliance rates and revenues, distributors of alcoholic beverages would be required to verify retail compliance with the tax prior to sale.

Increase IRS enforcement funding.—The Administration proposes to increase compliance with the tax code by providing additional funding to IRS. These funds would be used to collect delinquent tax debt and increase the audit workforce.

Extend tax deadlines for Desert Shield participants.—This proposal would extend the time period for filing Federal tax returns, paying Federal tax and taking other actions until 180 days after an individual's participation in the Desert Shield operation comes to an end.

Extend railroad unemployment insurance (UI) reimbursable status.—To prevent public subsidies from being diverted to pay for the high unemployment costs of the private sector railroads, public commuter railroads and Amtrak were exempt from the full railroad unemployment tax rate in 1989 and 1990. Instead, they were required to reimburse the railroad unemployment insurance fund for the actual costs of their employees. Under this proposal the exemption would be extended beyond its current law expiration date.

Increase Department of Housing and Urban Development (HUD) interstate land sales fee.—The Interstate Land Sales Full Disclosure Act gives HUD the responsibility of registering certain subdivisions that are sold or leased across State lines. A fee is charged when a developer files a statement of record about the subdivision with HUD. The fee charged cannot exceed $1,000 for any one developer. Under the current structure, the fees collected cover only a portion of the costs associated with the administration of the program. The Administration's proposal would remove the $1,000 fee limitation to help offset fully the direct administrative costs of the program.

Extend abandoned mine reclamation fees.—The abandoned mine reclamation fees, which are scheduled to expire on September 30, 1995, would be extended. Collections from the existing fees of 35-cents per ton for surface mined coal and 15-cents per ton for underground mined coal are allocated to States for reclamation grants. Abandoned land problems are expected to exist in certain States after all the money from the collection of fees under current law is expended.

Extend research and experimentation (R&E) tax credit.—The 20 percent tax credit provided for certain incremental research and experimentation expenditures, which was scheduled to expire on December 31, 1990, was extended for 1 year under the Omnibus Budget Reconciliation Act of 1990. The Administration propo permanent extension of the R&E credit.

Extend research and experimentation (R&E) allo tion rules.—Companies with foreign operations are lowed to allocate 64 percent of domestic R&E expen tures to their domestic operations and 64 percent foreign R&E expenditures to their foreign operatio The remaining expenses are to be allocated on the b of gross sales or (subject to a limitation) gross incon Under the Omnibus Budget Reconciliation Act of 19 these rules are extended to apply to taxable years b ginning on or before August 1, 1991. The Administ tion proposes a 1 year extension of these rules.

Establish family savings accounts.—Americans wo be encouraged to increase personal savings by bei permitted to establish Family Savings Accounts w contributions of up to $2,500 per year (with a li of two such accounts per family). Contributions wo not be deductible but earnings would be excluded fr income while in the account and would be permanen excluded if the contribution to which they relate r mains in the account for more than 7 years. Earnin on withdrawals within 3 years of contribution wo be subject to a 10 percent excise tax. Available inve ments would be the same as for current Individ Retirement Accounts. Accounts would not be availa to single individuals with income exceeding $60,000 to families with income exceeding $120,000.

Extend health insurance deduction for self-e ployed.—Under the Omnibus Budget Reconciliation A of 1990, the 25 percent deduction provided to self-e ployed individuals for the cost of health insurance e penses was extended through December 31, 1991. T Administration proposes to extend the deduction for year through December 31, 1992.

Extend low-income housing tax credit.—This cre was extended through December 31, 1991 under t Omnibus Budget Reconciliation Act of 1990. A 1-y extension of this credit is proposed.

Extend targeted jobs tax credit.—The Administrat proposes to extend the targeted jobs tax credit for year. This credit, which is generally equal to 40 perce of the first $6,000 of qualified first year wages (percent of up to $3,000 of wages to any disadvanta summer youth employees), was extended through D cember 31, 1991 under the Omnibus Budget Re onciliation Act of 1990.

Establish enterprise zones.—The Administration p poses to provide tax incentives to promote entrep neurship and job creation in up to 50 economically d tressed urban and rural communities. Beginning 1992, the proposal provides for elimination of the ca ital gains tax with respect to tangible investments cated in a zone, expensing .of investments in certa corporate stock issued by zone businesses, and refu able tax credits for low-income zone employees. Th proposal is discussed more fully in Chapters V.A a VI.A.

Waive excise tax for certain early withdrawals fr Individual Retirement Accounts (IRAs).—Under curr law, early withdrawals from a fully-deductible IRA ject to a 10 percent excise tax (penalty), and included as ordinary income on an individual's tax return. The Administration proposes to waive the 10 percent cise tax for early withdrawals effective January 1, 91, if the money is used for a first-time home purchase and the home costs no more than 110 percent f the median price of homes. The maximum amount t could be withdrawn without penalty for a first-e home purchase would be $10,000.

Extend business energy tax credits.—The Administration proposes to extend business energy tax credits for lar and geothermal properties for 1 year. These credits are sheduled to expire on December 31, 1991 under rrent law.

Double and restore adoption deduction.—The Administration proposes to restore and double to $3,000 the special needs adoption deduction, effective January 1, 1992.

Extend taxes to finance the Highway Trust Fund.—The budget contains the Administration's proposal for new 5-year highway and transit programs financed from the Highway Trust Fund. Legislation to enact and finance this program will be transmitted to the Congress. The legislation will be financed by extending the $.09 gasoline tax, the $.15 diesel tax, and other excise taxes dedicated to the Trust Fund that were enacted in 1987 to support the current highway program.

*$50 million or less.

[1] These estimates are based on the direct effect only of legislative changes at a given level of economic activity. Induced effects on the economy are taken into account in forecasting incomes, however, and in this way affect the receipts estimates by major source and in total.

[2] The proposal to enhance long-term investment is shown in Table X-4 and in tables in Part Five as estimated by the Treasury Department's Office of Tax Analysis (OTA). Because the methodological differences among OTA, Congressional estimators, and outside experts have not yet been resolved, totals are presented with the Administration's estimate and with a zero (neutral) entry for this proposal.

[3] Net of income tax offsets.

USER FEES AND OTHER COLLECTIONS

The budget includes all Federal cash flows. Under existing budget concepts, all income to the Government arising from the exercise of its sovereign powers (mainly, but not exclusively, taxes) is classified as governmental receipts and included in the receipt totals. In contrast, any income from the public that results from voluntary business-like transactions is classified as offsetting collections, which offset outlays rather than being included with the governmental receipts.

The preceding pages covered governmental receipts, including compulsory charges. This discussion covers offsetting collections, particularly the Administration's user fee proposals. As shown in Table X–5, total offsetting collections from the public, including those proposed by the Administration but excluding the collections of the off-budget Postal Service, are estimated to be $187.4 billion in 1992.

The budget contains a variety of user fee and other offsetting collections proposals that would yield $2.3 billion in 1992 and $12.0 billion over the years 1992 through 1996. Administration proposals establish or increase fees in order to recover more of the costs of providing Government services. Descriptions of these proposals, which are listed in Table X–6, are presented below.

Table X–6 splits the proposals between discretionary and mandatory, indicating which of the Budget Enforcement Act (BEA) requirements apply.

Discretionary.—The discretionary proposals create savings under the BEA's domestic discretionary spending limits.

- *Medicare and medicaid survey and certification.*—Establish fees for survey and certification activities required by the Social Security Act. Providers and suppliers would be charged fees, which would be set annually to cover all programmatic a administrative costs.
- *Food and Drug Administration (FDA).*—Establ fees for FDA review of new product applicatio including new and generic drugs, medical devic biologics, and food and color additives. A porti of these fees would finance expanded FDA acti ties in these areas. The proposal also includes f for the registration and inspection of seafood pr essors.
- *Veterans medical care.*—Permanently authori the copayment expansion that is scheduled to e pire September 30, 1991, enacted in the Omnib Budget Reconciliation Act of 1990 (OBRA 199 Establish copayments, subject to means testin for treatment of non-service-connected illnesses veterans with service-connected disabilities ra 40 percent or lower.
- *Small Business Administration (SBA).*—Increa guarantee fees on most general business lo from 2 percent to 5 percent, on regular small bu ness investment companies from 1.2 percent 5 percent, and on development finance compan from 0.5 percent to 1 percent. Savings reflect reduction in SBA's credit subsidy outlays, rath than increased collections.
- *Hard rock mining claim holding fee.*—Establi an annual holding fee which would require holde of mining claims on Federal lands to pay $1 per claim. This fee would replace the existing quirement that claimants spend $100 per year veloping each claim. This change would elimin activities that result in surface disturbance of la solely to maintain a claim. A portion of the would support the Bureau of Land Management

[1] Savings from credit fees reflect a reduction in subsidy outlays, rather than increased collections.

mining law administration program and finance the collection of the fee itself.

- *Securities and Exchange Commission.*—Increase the registration fee from $\frac{1}{50}$ to $\frac{1}{32}$ of 1 percent of the dollar value of the offering.
- *Federal Communications Commission (FCC).*—Increase existing licensing and service fees from commercial users. A portion of this increase would be dedicated to the expansion of FCC services.
- *Commodities Futures Trading Commission.*—Establish a transaction fee of 13 cents per contract traded on commodity futures and options exchanges.
- *Federal Emergency Management Agency (FEMA).*—Establish fees to cover costs incurred by FEMA (acting as the Nuclear Regulatory Commission's agent) in regulating the evacuation and emergency preparedness plans of nuclear power plants.
- *FCC spectrum auction.*—Approximately 30 megahertz of radio spectrum which the Government currently uses or has reserved would be freed up for private users, whom the FCC will reassign from other frequencies. The spectrum vacated by those private users would be reassigned through auctions beginning in 1994.

Mandatory.—The following mandatory user fee and her offsetting collection proposals create savings for rposes of pay-as-you-go enforcement.

- *Elk Hills naval petroleum reserve.*—The Administration proposes to lease this oil field which is presently operated by the Department of Energy. Bonus payments of $1.0 billion in 1992 and $0.4 billion annually from 1993 through 1996 plus annual royalty payments would more than offset the loss of annual receipts for oil sales that would otherwise be collected by the Government. Under this leasing proposal, discretionary funds that would otherwise have to be appropriated for this program would not be needed.
- *Veterans loan origination.*—Make permanent the .625 percent loan origination fee increase that was enacted as part of OBRA 1990 and is scheduled to expire September 30, 1991. OBRA 1990 effectively raised the origination fee for a no-downpayment loan from 1.25 percent to 1.875 percent. In addition, non-active duty military personnel who use the program more than once would pay a 2.5 percent fee for each additional loan. Savings reflect a reduction in the VA credit subsidy outlays, rather than increased collections.
- *Corps of Engineers.*—Expand the types of user fees collected to include those for day use of developed recreational sites and for all overnight camping sites.
- *Forest Service.*—Expand the types of facilities and services for which fees may be charged at national forest recreation sites. Collections would be dedicated to increased rehabilitation and reconstruction of existing trails and facilities.
- *Agricultural Marketing Service.*—Establish fees paid by local market committees for administrative support provided by the Government for marketing agreements and orders which help stabilize commodities markets. Additionally, establish user fees for tobacco news reports, for the development and assistance of grading standards, and for the

statistical and economic analysis of commodity markets.

- *Federal Grain Inspection Service.*—Establish user fees for standardization and quality assurance activities that support the fee-funded weighing and grain inspection services.
- *Environmental Protection Agency.*—Remove the cap on the amount that may be collected from any one registrant under the existing user f for pesticide reregistration.
- *Arctic National Wildlife Refuge leasing.*—Certa of these lands would be made available for and gas leasing. Receipts from the first lease s would be in 1993 and the second in 1995.

Detailed Receipts Tables.—A detailed report of g ernmental receipts by source is presented in Table X- Offsetting receipts by type are detailed in Table X-8.

XI. TAX EXPENDITURES

XI. TAX EXPENDITURES

Congressional Budget Act of 1974 (Public Law 4) requires that a list of tax expenditures be in- d in the budget. This Act identifies tax expendi- as "revenue losses attributable to provisions of Federal tax laws which allow a special exclusion, tion, or deduction from gross income or which e a special credit, a preferential rate of tax, or rral of liability."

expenditures are one means by which the Fed- Government pursues public policy objectives and, y cases, can be regarded as alternative means ieving the same objectives pursued by other Gov- nt policy instruments such as direct expenditures gulations. There are numerous examples of the rity in objective between tax expenditures and outlays. For instance, the cost of medical care ced both by direct Government expenditures for edicare and medicaid programs and by the exclu- from individual taxpayer income of the medical nce premiums that employers pay for their em- s. State and local governments benefit both from grants and from the ability to borrow funds at empt rates. Individuals benefits both from social ty payments and from the exemption of most of payments from tax.

expenditures ordinarily result from enacted legis- . They therefore are not submitted to Congress year and do not routinely receive a formal and matic annual review. In this sense, they share a tive status with entitlement programs that do quire annual appropriations (such as social secu- . Tax expenditures, however, are generally re- d whenever significant policy decisions are made the overall level of tax receipts.

Omnibus Budget Reconciliation Act of 1990 A) has affected some of the tax expenditures in ar's budget. While the top statutory rate on ordi- ncome is 31 percent, the rates on capital gains mited to 28 percent. The earned income tax credit xpanded and included a new credit for child insurance. A new tax credit for access expendi- for the disabled was introduced. Other relevant es were revisions of the income tax rates and modifications to and extensions of other tax pref- s.

Alternative Tax Expenditure Estimates

ax expenditure is defined as an exception to the ne provisions of the tax structure. The Act does owever, specify the baseline provisions of the tax Deciding whether provisions are special or pref- al exceptions therefore, is a matter of judgement. aseline is the "normal" tax measure, used by the Committee on Taxation. The other baseline is ference" tax law, which has been used since 1983. As in prior years, this year's tax expenditure estimates will be presented using both baselines.

Normal Tax Baseline.—The normal tax structure is patterned on a comprehensive income tax. Such a tax defines income as the sum of consumption, taxes, and the change in net wealth in a given period of time. The normal tax is not limited to a particular structure of tax rates, or by a specific definition of the taxpaying unit. It not only allows personal exemptions and a standard deduction, but also allows deduction from gross income of the expenses incurred in earning it. The normal tax structure, however, does make several major departures from a pure comprehensive income tax. For example:

- Under a comprehensive income tax, income is taxable as it accrues; under the normal tax, income is taxable when realized in exchange. Thus, with a normal tax baseline, the deferral of tax on unrealized capital gains, as under present law, is not regarded as a tax expenditure.
- Under a comprehensive income tax, all income is subject to tax whether it is self-produced and consumed or produced for exchange with others. The normal tax baseline includes only income realized in exchange with others. Thus, the exclusions from tax of the rental value of owner-occupied housing and farmers' consumption of their own produce, as under present law, are not regarded as tax expenditures when the normal tax is the baseline.
- Under a comprehensive income tax, there is no separate corporation income tax; corporate equity income is taxed only once—to shareholders whether or not distributed in the form of dividends. But the normal tax baseline includes a separate corporation income tax, levied at a flat rate equal to the highest statutory corporate income tax rate. Thus, with a normal tax baseline, rather than considering the corporate tax a "negative tax expenditure" or tax penalty, the lower rates on the first $75,000 of corporate income give rise to a tax expenditure.
- Under a comprehensive income tax, the income measure would adjust the cost basis of capital assets and debt for changes in the price level during the time assets are held. Consequently, the failure to take account of inflation in measuring depreciation, capital gains, and interest income would be regarded as a negative tax expenditure, and failure to take account of inflation in measuring interest costs would be regarded as a positive tax expenditure. Under the normal tax baseline, however, these inflation adjustments are not made.

Notwithstanding these exceptions, the normal tax concept can be thought of as a practical compromise with the ideal of a comprehensive income tax, one that avoids certain complexities while preserving the general idea.

Reference Law Baseline.—Beginning with the 1983 budget, the Administration has used the "reference law" baseline to identify tax expenditure provisions.

Reference law is the set of generally applicable, statutory income tax accounting rules, i.e., rules for measuring income subject to tax. Like the normal tax baseline, the reference law accepts realization accounting principles, the existence of a separate corporation income tax, and the absence of inflation adjustments in the measurement of capital income as part of the baseline.

Unlike the normal tax baseline, however, the reference law baseline includes the statutory schedule of corporation income tax rates, the "capital gain"/"ordinary income" distinction, and several capital cost recovery allowances. Thus, under the reference law baseline there are:

- No tax expenditures for corporation income tax rates below the maximum statutory rate.
- No general capital gain tax expenditures; only the statutory definition of otherwise "ordinary income" events, such as timber cutting, coal and iron ore royalties. Also, the sale of certain agricultural products occasion a tax expenditure entry when capital gains tax rates are preferentially lower.
- No "accelerated depreciation" tax expenditures; only specified exceptions to otherwise applicable depreciation and mineral cost recovery schedules give rise to tax expenditures.

Under the reference tax law baseline, entries in the tax expenditure budget closely conform to budget categories. Reference law tax expenditures measure "taxes otherwise due" the Government were it not for special exceptions in the tax code. These special exceptions have the characteristic that they serve programmatic functions, just as direct outlays for national defense, health care, or farm subsidies do. These tax expenditures, therefore, are the equivalents of direct outlays from the standpoint of the budget. It is generally the case that while tax expenditures under the normal tax baseline are also considered tax expenditures under the reference law baseline, the reverse is not true. Hence, not all departures from the normal tax base are financially equivalent to direct outlays.

Adopting the reference law as the baseline for tax expenditure measurement does not imply the reference law to be "ideal." Whether the generally applicable reference law rules for measuring the tax base and the schedules of personal, corporate, and capital gains tax rates are in accord with economic income measurement and allocative efficiency, and whether they fairly distribute the burden of taxation are matters of tax policy to be dealt with as such in the process of improving the efficiency and fairness of the tax system, and are not "expenditure policies."

Comparison of Reference Tax Rules and the No mal Tax Standard.—The differences between the r erence tax rules and the normal tax baseline include:

1. Definition of the taxpaying unit. The taxpayi units are the same in the normal and reference t structures, with one major exception.[1] In the norm tax, controlled foreign corporations are not regarde as entities separate from their controlling U.S. shar holders. Therefore, the deferral of tax on income r ceived by controlled foreign corporations is regard as a tax expenditure. In contrast, except for tax have activities, the reference tax rules follow the current t system in treating controlled foreign corporations separate taxable entities whose income is not subje to U.S. tax until distributed to U.S. taxpayers. Und that definition of the tax unit, deferral of tax on co trolled foreign corporation income is not a tax expend ture because U.S. taxpayers generally are not taxe on accrued, but unrealized, income.

2. Tax rate schedules. Separate schedules apply the various taxpaying units. These schedules are i cluded in the reference tax system. The normal t system is similar, except that it specifies a single r (the current maximum rate) on corporate income. T lower tax rates applied to the first $75,000 of corpora income are thus regarded as a tax expenditure.

Since 1987, an alternative minimum tax (AMT) h been in effect. This tax, levied at a flat rate on a t base derived by specific tax accounting rules, is payab whenever the AMT exceeds the regular income tax l ability, as determined by regular applicable income t accounting rules.

3. General accounting rules for determining incom subject to the tax. Income subject to tax is define as gross income less the costs of earning that incom The Federal income tax has always defined gross i come to include: (1) consideration received, both withi the United States and abroad, in the exchange of good and services, including labor services or property; an (2) the taxpayer's share of gross or net income earne and/or reported by another entity.[2] Under the referenc tax rules, therefore, gross income does not include gif defined as receipts of money or property that are n consideration in an exchange, or most transfer pay ments, which can be thought of as gifts from the Gov ernment. Gross income does, however, include transf payments associated with past employment, such a social security benefits. The normal tax baseline als excludes from gross income gifts between individuals Under the normal tax baseline, however, all cash tran fer payments from Government to private individuals are counted in gross income, and exemptions of such transfers from tax are identified as tax expenditures.

---

[1] The Internal Revenue Code identifies as taxpaying units individuals (single, marri head of household), corporations (except those electing subchapter S treatment), coopera real estate investment trusts, and other financial organizations that attribute their inco to members in whose hands it is taxable, as well as trusts and estates (to the ext income is not distributed to beneficiaries). Certain otherwise taxable corporations and ass ciations whose activities and ownership meet the requirements of section 501 are exem from income tax, as are Government-owned enterprises encompassed by section 115.

[2] Such income included interest, dividends, rents, royalties, and the taxpayer's share o the profits of partnerships, subchapter S corporations and cooperatives.

The costs of earning income are deductible in determining taxable income under the reference and normal tax rules. These costs include: (1) expenses incurred in earning income from personal service (not including expenditures on goods and services for personal use); (2) costs of earning income incurred by a taxpayer's trade or business, including costs of goods sold[3] and an allowance for physical capital used up;[4] and (3) interest paid creditors who have advanced funds to help finance the ownership and use of assets by the trade or business.

In the cases of individuals who hold "passive" equity interests in businesses, the pro rata shares of sales and expense deductions reportable in a year are limited. A passive business activity is defined to be one in which the holder of the interest, usually a partnership interest, does not actively perform managerial or other participatory functions. The taxpayer may generally report no larger deductions for a year than will reduce taxable income from such activities to zero. Deductions in excess of the limitation may be taken in subsequent years, or when the interest is liquidated.

With one exception, both the reference and normal tax law standards have incorporated the general statutory provisions governing allowable deductions. The exception is the rule for determining tax depreciation allowances. Under the reference tax law standard, the accelerated cost recovery system (ACRS) allowances for property placed in service before January 1, 1987, serve as the baseline. The system of depreciation allowances provided by the Tax Reform Act of 1986 is the reference tax law baseline for investments placed in service beginning with January 1, 1987. Thus, under the reference tax law standard, there are no tax expenditures from accelerated depreciation.

Under the normal tax baseline, however, the depreciation allowance for personal property is determined by using statutory accelerated methods[5] over tax lives equal to mid-values of the asset depreciation range.[6] The baseline for real property is computed using 40-year straight-line depreciation. Consequently, from 1981 through 1986, the ACRS depreciation provisions generated tax expenditures under the normal tax baseline. The Tax Reform Act of 1986 provided depreciation allowances approximately equal to those in the normal tax baseline for machinery and equipment. Post-1986 investment, therefore, will no longer generate tax expenditures under either standard for investments of this type.

The baseline income tax system also stipulates rules for valuing the exchange of goods and services and specifies when gross income is reportable and when deductions may be taken. On these matters, both the reference and normal tax law standards embody the provisions of enacted law including: (1) valuation is determined at the time transactions occur (realization as opposed to accrual accounting); (2) the market value of services from owner-occupied housing and other durable goods or self-produced income, such as do-it-yourself repairs and maintenance, is excluded; (3) historical costs determine allowable deductions for capital cost recovery and the gain on the sale of an asset (no inflation adjustments); (4) current expenses are deductible from gross income in the period when the transaction is completed, while capital expenditures are recovered by depreciation or depletion deductions over the asset's productive life; and (5) the accounting period used to determine income subject to tax, computing tax due and payable, and the dates when tax must be paid, are those specified under current law.

Both the reference and normal tax law standards accept, without classifying it as a tax expenditure, a tax credit for foreign income taxes paid up to the amount of U.S. income taxes that would otherwise be due. This credit prevents the double taxation of income earned abroad.

Tax Expenditures as Substitutes for Budget Outlays

Under both the normal and reference tax baselines, some tax expenditure provisions can be thought of as substitutes for budget outlays. For example:

- Current law excludes some forms of employee compensation, such as certain military housing and food allowances or employer-paid fringe benefits, from employees' gross income although they are clearly part of an employee's total compensation and are properly deductible from the gross income of the trade or business of employers who are taxable entities. Defense Department outlays for military personnel are lower because part of military compensation takes the form of tax-free housing and food allowances. Excluding this compensation from tax substitutes for the higher direct outlays that would otherwise be required to maintain an equivalent level of compensation. Compensation in this form, if received from another employer, would be subject to tax.
- The interest payments on State and local tax-exempt government are no less income than interest, dividends, rents, and royalties received from other sources, but they are not included in the bondholder's gross income. The tax exclusion for interest paid by State and local governments enables them to obtain funds at lower rates. This exclusion is, therefore, equivalent to an interest subsidy or capital grant to State and local governments on the outlay side of the budget.
- The dividend and interest receipts of pension funds are not included as they accrue in the gross income of the taxable beneficiaries who ultimately receive them; they are reported only when they are paid out as retirement benefits after compounding, in some cases, for many years, at pre-tax interest rates.

The tax exclusion of employer-paid pension, health, and other insurance premiums and the preferred treatment of pension trust income are equivalent to direct

---

[3] Cost of goods sold includes the compensation of employees and payments for goods and services purchased from other firms, and royalties paid, to the extent the inputs used are allocated to the goods sold.

[4] These costs include depreciation in the case of machinery, equipment, and structures, and depletion in the case of mineral deposits.

[5] Declining balance at double the straight-line rate or sum-of-years digits.

[6] An elective depreciation system in effect from 1971 through 1980.

Federal Government subsidies that would partly pay for private retirement, health, and insurance plans.

The tax laws also permit many deductions from gross income in the derivation of taxable income that have no direct relation to the cost of earning the reported gross income, as the general rule would require. For example:

- Individuals may deduct contributions to charitable, educational, scientific, or religious organizations. Matching grants to qualified organizations based on contributors' support could replace the charitable deductions.
- Some oil, gas, and mineral producers may deduct a percentage depletion allowance that is not limited to recovery of the cost of acquiring the deposit. In addition, some investments in this type of property may be deducted in the year incurred, rather than capitalized and recovered as production ensues. These special rules permit investment costs to be recovered more rapidly than the reference tax rules generally allow. They, in fact, often permit more than the full investment to be recovered tax-free. Direct subsidies paid to mineral producers could replace the preferential treatment of oil and mineral investments.
- Individuals are allowed to deduct mortgage interest from their pre-tax incomes, although they need not report the (imputed) gross income they receive from the housing that the mortgages finance. Expanded Federal mortgage interest subsidy programs could substitute for the deductibility of mortgage interest.

Finally, there are special exceptions to the general rules for determining net income tax due and payable. After a taxpayer has determined his income, taking into account all exclusions and deductions, and has applied the appropriate tax rate schedule, there are still other factors that determine the amount to be paid. For example, the taxpayer may take as credits against tax otherwise due and payable certain amounts determined by expenditures during the tax year on:

- Child and dependent care.
- Newly constructed or substantially rehabilitated low-income housing.
- Incremental research and experimentation.
- Rehabilitation of old and historic structures.

It is not difficult to imagine equivalent outlay programs that would subsidize these activities directly.

The major tax expenditures defined according to the normal tax baseline that are not tax expenditures according to the reference tax rules are: deferral of income of controlled foreign corporations, expensing of research and development expenditures, progressive corporation income tax rates, the difference between statutory depreciation rules (ACRS) for investments made between 1981 and 1986, exclusion of public assistance benefits and of scholarship and fellowship income, and the preferential treatment of capital gains.

Outlay Equivalents

Beginning with the 1983 budget, the Administration introduced the concept of "outlay equivalents" as a substitute for "revenue losses" as measures of the bud
impact of tax expenditure programs. This was done
harmonize the tax expenditure budget with the impli
purposes of the budget format as the Federal Gover
ment's sources and uses statement. The outlay equi
lent measure is calculated to be the amount of out
that would be required to provide to the taxpayer
same after-tax income that would be received wh
using the revenue loss measure. This measure allo
a comparison of the cost of the tax expenditure w
that of a direct Federal Government expenditure.

In many cases, the outlay equivalent tax expendit
estimate differs from the revenue loss estimate for
same tax subsidy. This difference arises when the
subsidy functions as a Government payment for serv
and, when this is the case, the outlay equivalent e
mate is always larger than the revenue loss estima
Revenue loss estimates are lower in these situatio
because such payments for services are treated a
reduction in a tax that increases the taxpayer's af
tax income. Under either a normal or reference inco
tax law standard, such payments would instead en
the taxpayer's pre-tax income as Government payme
for services.

For some tax expenditures, however, the revenue l
is equivalent to a direct Government outlay. The ac
erated cost recovery deductions, for example, result
tax deferrals, the amount of which are the princip
of interest-free loans. They also entail consumption e
penditures, the tax benefits of which function as pr
reductions. Since neither the loan principal nor a pr
reduction enters taxpayers' pre-tax income, the iss
of tax exemption does not arise.

Measuring Tax Expenditures

Presenting budget outlays along functional lines
a way of showing how the Federal Government inf
ences the allocation of resources. The functions m
be broadly categorized as: (1) the provision of pub
goods and services; (2) the provision of subsidies; a
(3) the payment of transfers. The budget outlays f
public goods, such as national defense, are used to
quire the labor and capital services needed to produ
such goods. Subsidies, such as those for school lunch
are used to reduce the effective price of the subsidi
item. Transfers, such as aid to families with depende
children, are intended to provide a level of income
recipients they would not otherwise achieve.

Functional budget outlay figures measure the
source cost to the Federal Government of accomplishi
the program objectives. When functional budget outl
figures are used to evaluate the costs of specific p
grams, these costs should reflect the pre-tax price
the resources. The market value of the goods and se
ices included in GNP covers indirect taxes (sales a
property taxes) as well as before tax incomes of w
earners and property owners.[7] Consistency requir
that all budget outlay measures also be stated in p
tax magnitudes. Outlays for the purchase of goods a

---

[7] The income of property owners is usually received in the form of rent, interest
profit.

services are generally gross of taxes.[8] Similarly, subsidy outlays in the budget generally enter the gross incomes of sellers of subsidized goods. In some instances, Government purchases (outlays) or subsidies are exempted from tax by a special tax provision. When this occurs, the outlay figure understates the resource cost of the program and is, therefore, not comparable with other outlay amounts. For example, as noted above, the outlays for certain military personnel allowances are not taxed. If this form of compensation were treated as income taxable to the employee, the Defense Department would have to make larger cash payments to its military personnel to leave them as well off after tax as they are now. The tax subsidy must be added to the tax-exempt budget outlay to make this element of national defense expenditures comparable with other outlays.

The Treasury Department prepared all tax expenditure estimates based upon income tax law enacted as of December 31, 1990. In estimating tax expenditures, it is assumed that the existing tax structure is unchanged. The estimates of tax expenditures conform to the functional budget classification for outlays.

In table XI–1 are shown, side-by-side, the outlay equivalent and the revenue loss estimates of each special tax provision by fiscal year. The revenue loss estimates are displayed separately for corporations and individuals. The outlay equivalent estimates are comparable to the taxable outlay figures in the budget. These entries represent amounts that could be added to the other functional budget outlays while, at the same time, being added to budget receipts to provide a more consistent and comprehensive display of the resource reallocations produced by Federal fiscal measures. The revenue loss estimates are not consistent with direct budget outlays because they do not adjust for the implicit tax liability on certain items, as was noted above.

The tax expenditure estimates are similar to outlays and should not be interpreted as estimates of the increase in Federal receipts or the reductions in budget deficits that would accompany the repeal of the special provisions. There are four reasons why such an interpretation is not possible.

First, the assumed deletion of a tax expenditure may have incentive effects that alter the behavior of individuals, households and firms. These may be either "cross" or "own" effects. Many tax expenditures are not independent of each other. If one subsidy program is repealed or severely curtailed, it is frequently the case that the demand for, and cost of, other Federal subsidy programs will be increased. For example, if the exclusion of employer-paid medical insurance from the gross income of employees were repealed, other tax-exempt forms of compensation, such as employer paid pensions, would probably expand. Consequently, the net effect on the budget of repealing the exclusion of employer-paid medical insurance would not equal the estimated cost of that tax expenditure, but would be smaller after subtracting some increase in tax expenditures for pensions or other fringes. If deductibility of charitable contributions or mortgage interest were severely limited, some taxpayers would contribute less to charitable donees or hold smaller mortgages, with a concomitantly smaller effect on the budget than if no such limits were in force.

Second, tax expenditures are all cleared through individual and corporation tax accounts and, for this reason, their values become interdependent. For example, excluding interest received from State and local governments lowers a taxpayer's taxable income and, in a tax system with progressive tax rates, this can reduce the value of other tax deductions, such as charitable contributions. If the interest exclusion alone were repealed, some taxpayers could be thrust into higher tax brackets, automatically increasing the value of charitable contributions and their budget cost even if taxpayers did not make larger contributions. On the other hand, if both the interest exclusion and the charitable deduction were repealed simultaneously, the increase in tax liability would be greater than the sum of the two separate tax expenditures since each is estimated assuming that the other remains in force.

Third, the annual value of tax expenditures for tax deferrals, like the outlay figures for government lending programs, is largely prepared on a strict cash receipts and disbursement basis. For example, the annual budget cost of tax deferrals due to the exclusion from employees' gross income of employers' contributions to employee pension plans is the sum of two items: the employers' current year pension plan contributions and the current year pension fund asset earnings. Both accrue to the current benefit of employees, but are not currently included in their gross incomes. If the tax expenditure composed of these two exclusions were repealed, the immediate budget impact would be to tax only the employees on the employers' current-year contributions and the current-year pension fund asset earnings. Only as the existing population of covered employees retired and received their annuities, thereby depleting the stock of asset reserves previously accumulated with untaxed dollars, would the remaining deficit-reducing impact of repealing this tax expenditure be fully registered in the budget.

Finally, repeal of some provisions could affect overall levels of income and rates of economic growth. Consequently, large changes in tax expenditures could be expected to alter projected growth rates for aggregate national income and product and, thus, the tax base over the forecast period. All receipts and expenditures in the budget are based, however, on projections of income and growth that assume all existing laws will continue (except as amended by proposals made in the budget).

Tax Expenditures By Function

The 1990–92 outlay equivalent and revenue loss estimates of tax expenditures are displayed by the budget's functional categories in table XI–1. In the appendix table, the major tax expenditures are ranked by the fiscal year 1992 total revenue loss estimates. Tax expenditures that are divided into functional categories in table XI–1 are merged in the appendix table, e.g., instead of the three separate entrees for charitable contributions found in XI–1, the table contains one merged entry.

---

[8] The payments to vendors and Government employees are gross income to the sellers out of which taxes will be paid as determined by the reference tax law in effect.

Listing revenue loss estimates under the corporation and individual headings does not imply that these categories of filers benefit from the special tax provisions in proportion to the respective tax expenditure amounts shown. Rather, these breakdowns principally show the specific tax accounts through which the cost of the program is cleared because the sources of data for estimating tax expenditures are largely corporation and individual income tax returns. Corporations, as such, neither pay tax nor receive Government payments. They are the institutional conduit through which their employees, creditors and stockholders engage in exchanges with customers and the Government. Thus, the exemption from Federal income tax of interest paid by State and local governments provides a subsidy to those governments in the form of lower borrowing rates. Individual and corporate holders of such debt only benefit from the tax exemption to the extent their marginal tax rates exceed the percentage spread between taxable and nontaxable interest rates.

With these caveats in mind, a review follows of the tax expenditure estimates by functional category, as shown in table XI–1, that are departures from both the reference and normal tax law unless otherwise specifically identified. Whenever an item is identified as a tax expenditure under the normal tax rules, but not the reference tax rules, it is indicated by the designation, "Normal tax" in the table. In these cases, a line also appears, designated as "Reference tax," showing that tax expenditures for this item would be zero using the reference tax rules.

National Defense

Benefits and allowances to armed forces personnel.—The housing and meals provided military personnel, either in cash or in kind, are excluded from income subject to tax.

International Affairs

Income earned abroad.—A U.S. citizen or resident alien who resides in a foreign country or who stays in one or more foreign countries for a minimum of 11 out of the past 12 months may exclude $70,000 per year of foreign-earned income. Eligible taxpayers also may exclude or deduct reasonable housing costs in excess of one-sixth of the salary of a civil servant at grade GS–14, step 1. These provisions do not apply to Federal employees working abroad; however, the tax expenditure estimate does reflect certain allowances that are excluded from their taxable income.

Income of Foreign Sales Corporations (FSC).—The Foreign Sales Corporation (FSC) provisions exempt from tax a portion of U.S. exporters' foreign trading income to reflect the FSC's sales functions as foreign corporations. These provisions conform to the General Agreement on Tariffs and Trade.

Income of U.S.-controlled foreign corporations.—The income of foreign corporations controlled by U.S. shareholders is not subject to U.S. taxation because under the reference tax rules, corporations chartered and operating in foreign countries are not subject to U.S. income reporting and taxation. The income becomes taxable only when the controlling U.S. shareholders receive dividends or other distributions from the foreign stockholding.

Under the normal tax accounting rules, the currently attributable foreign source pre-tax income from such a controlling interest is subject to U.S. taxation, whether or not distributed. Thus, when the normal tax rule is taken as a baseline, the excess of controlled foreign corporation income over the amount distributed to a U.S. shareholder gives rise to a tax expenditure in the form of a tax deferral, that is, an interest-free loan.

Source rule exceptions.—The worldwide income of U.S. persons is taxable by the United States and a credit for foreign taxes paid is allowed. The amount of foreign taxes that can be credited is limited to the pre-credit U.S. tax on the foreign source income. There are two exceptions. The first is an exception for sales of inventory property that reduces the U.S. tax of exporters. The second exception is for financial institutions and certain financing operations of nonfinancial enterprises from the rules that require allocation of interest expenses between domestic and foreign activities of a U.S. taxpayer.

General Science, Space, and Technology

Expensing R&E expenditures.—Research and experimentation (R&E) expenditures are commonly referred to as investments because their benefits continue to accrue for several years, when they are successful. The characteristics of R&E, however, are such that it is difficult to identify completed, discrete R&E projects, to determine whether the completed project is successful and, if it is successful, what its expected life will be. For these reasons, the statutory provision that these expenditures may be currently deducted (expensed) is considered part of the reference law. Under the normal tax standard, the expensing of R&E expenditures is viewed, however, as the source of a tax expenditure. To measure the tax deferral under the pre-1983 method, the "norm" assumed is that all R&E expenditures are successful and have an expected life of eight years.

R&E credit.—The tax credit is 20 percent of the qualified expenditures in excess of each year's base amount. This threshold is the product of multiplying a "fixed-base percentage", limited to a maximum of for existing companies, by the average amount of the company's gross receipts for the four preceding years. The "fixed-base percentage" is the ratio of R&E expenses to gross receipts for the 1984 to 1988 period. Start-up companies that did not both incur qualified penses and have gross receipts in at least three of the base years are assigned a "fixed-base percentage" of .03. A similar credit with its own separate threshold is provided for taxpayers' basic research grants to universities. Beginning in 1989, the otherwise deductible qualified R&E expenditures were reduced by the amount of the credit. Both R&E credits have been extended to the end of 1991.

Allocation of R&E expenditures.—Regulations issued in 1977 were designed to achieve a reasonable allocation of R&E expenses between corporations' domestic and foreign activities, but successive legislative actions suspended this requirement. Currently, 64 percent of both U.S.- and foreign-based R&E expenses are allocated to their respective income sources. The remaining R&E expenses must then be allocated on the basis of gross sales or gross income. These rules are effective through August 1, 1991.

ENERGY

Exploration and development costs.—In the case of successful investments in domestic oil and gas wells, intangible drilling costs, such as wages, the costs of using machinery for grading and drilling, and the cost of unsalvageable materials used in constructing wells, may be expensed rather than capitalized or amortized over the productive life of the property.

Integrated oil companies may currently deduct only 70 percent of such costs and amortize the remaining 30 percent over five years. The same rule applies to the exploration and development costs of surface stripping and the construction of shafts and tunnels for other fuel minerals.

Percentage depletion.—Independent fuel mineral producers and royalty owners are generally allowed to take percentage depletion deductions rather than cost depletion on limited quantities of output. Under cost depletion, outlays not recovered immediately through expensing are deducted over the productive life of the property. Unlike depreciation or cost depletion allowances, percentage depletion deductions are not limited to the cost of the investment. Taxpayers, instead, deduct a percentage of gross income from mineral production at rates of 22 percent for uranium, 15 percent for oil, gas and oil shale, and 10 percent for coal. The deduction, however, is limited to 50 percent of net income from the property. OBRA increased the allowable deduction for oil and gas from 50 percent to 100 percent of net property income, and also reduced the excess depletion amount subject to the alternative minimum tax. Production from geothermal deposits is eligible for percentage depletion at 65 percent of net income, but with no limit on output and no limitation with respect to qualified producers.

Capital gains treatment of royalties on coal.—While the top statutory rate on ordinary income is 31 percent, the rates on capital gains are limited to 28 percent.

Tax-exempt bonds for energy facilities.—Tax-exempt bond financing for small scale hydroelectric generating facilities expired at the end of 1985. Tax-exempt financing for steam generating or alcohol production facilities was repealed by the Tax Reform Act of 1986. The budget cost of this type of tax-exempt financing will continue, however, until the bonds are retired.

Conservation and new technology credits.—A variety of tax incentives have been available to stimulate energy conservation and encourage conversion to alternative energy sources. All but two of these programs have expired. (The two surviving investment credits will expire after December 31, 1991. They provide a 10 percent credit for investment in solar and geothermal energy facilities.) Notwithstanding expiration, some of these incentive programs continue to have a budget effect. They are carried forward because qualified projects not constructed before the cut-off date, but subject to binding construction contracts, may be placed in service, or credits that were earned, but not taken due to insufficient tax liabilities, may be taken after the expiration dates.

Alternative fuel production credit.—A nontaxable $3 per barrel of oil-equivalent production credit is provided for several forms of alternative fuels for facilities placed in service before December 31, 1992. OBRA extended the credit to additional alternative fuels. As a general rule, it is available as long as the price of oil stays below $29.50 (in 1979 dollars).

Alcohol fuel credit.—Gasohol[9] is exempt from 5.4 of the 14 cents per gallon Federal excise tax on gasoline. There is a corresponding income tax credit for alcohol used as a fuel in applications where the excise tax is not assessed. This credit, equal to a subsidy of 54 cents per gallon for alcohol used as a motor fuel, is intended to encourage substitution of alcohol for petroleum-based gasoline.

Gas and oil exception to passive loss limitation.—Although owners of working interests in oil and gas properties are subject to the alternative minimum tax, they are exempted from the "passive income" limitations. This means that the working interest-holder, who manages on behalf of himself and all other owners the development of wells and incurs all the costs of their operation, may aggregate negative taxable income from such interests with his income from all other sources. Thus, he will be relieved of the minimum tax rules limit on tax deferrals.

NATURAL RESOURCES AND ENVIRONMENT

Exploration and development costs.—As is true for fuel minerals, certain capital outlays associated with exploration and development of nonfuel minerals may be expensed rather than depreciated over the life of the asset.

---

[9] A motor fuel composed of at least 10 percent alcohol.

Percentage depletion.—Most nonfuel mineral extractors also make use of percentage depletion rather than cost depletion, with percentage depletion rates ranging from 22 percent for sulphur down to 5 percent for sand and gravel.

Capital gains treatment of iron ore and of certain timber income.—While the top statutory rate on ordinary income is 31 percent, the rates on capital gains are limited to 28 percent.

Tax-exempt bonds for pollution control and waste disposal.—Interest on State and local government debt issued to finance private pollution control and waste disposal facilities was excludable from income subject to tax. This authorization was repealed for pollution control equipment and a cap placed on the amount of debt that could be issued for waste disposal facilities by the Tax Reform Act of 1986.

Historic preservation.—Expenditures to preserve and restore historic structures qualify for a 20 percent investment credit, but the depreciable basis must be reduced by the full amount of the credit taken.

Expensing multiperiod timber growing costs.—Generally, costs must be capitalized when goods are produced for inventory used in one's own trade or business, or under contract to another party. Timber production, however, was specifically exempted from these multiperiod cost capitalization rules, creating a special benefit derived from this deferral of taxable income.

Credit and seven-year amortization for reforestation.—A special 10 percent investment tax credit is allowed for up to $10,000 invested annually in clearing land and planting trees for the ultimate production of timber. The same amount of forestation investment as is eligible for the investment credit also may be amortized over a seven-year period. Without this preference, the amount would have to be capitalized and could be recovered (deducted) only when the trees were sold or harvested 20 or more years later. Moreover, the amount of forestation investment that is amortizable need not be reduced by any of the investment credit that is allowed.

AGRICULTURE

Expensing certain capital outlays.—Farmers, except for certain agricultural corporations and partnerships, are allowed to deduct certain expenditures for feed and fertilizer, as well as for soil and water conservation measures. Expensing is allowed, even though these expenditures are for inventories held at the end of the year, or for capital improvements that would otherwise be capitalized.

Expensing multiperiod livestock and crop production costs.—Farmers are exempted from application of the uniform cost capitalization rules to the production of livestock and crops with a production period of less than two years. Farmers establishing orchards, constructing farm facilities for their own use, or producing any goods for sale with a production period of tw years or more may elect not to capitalize costs. If the do, they must apply straight-line depreciation to a depreciable property they use in farming.

Loans "forgiven" solvent farmers.—In 1986, farmers were granted special tax treatment by being forgiven the tax liability on certain forgiven debt.[10] Normally, the amount of loan forgiveness is accounted f as a gain (income) of the debtor and he must eithe report the gain, or reduce his recoverable basis in th property to which the loan relates. If the debtor elect to reduce basis and the amount of forgiveness exceed his basis in the property, the excess forgiveness is taxable. However, in the case of insolvent (bankrupt) debtors, the amount of loan forgiveness never results i an income tax liability.[11] Farmers with forgiven deb will be considered insolvent for tax purposes, and thu qualify for income tax forgiveness.

Capital gains treatment of certain income.—While the top statutory rate on ordinary income is 3 percent, the rates on capital gains are limited to 2 percent.

Drought-related relief payments.—Governmen payments to farmers are part of their taxable incom in the year received. In 1988, a special exception wa provided, allowing the reporting of drought relief payments received in one year to be deferred until th following year.

COMMERCE AND HOUSING CREDIT

This category includes a number of tax expenditur provisions that also affect economic activity in othe functional categories. In general, provisions related t investment, such as accelerated depreciation, could a well have been classified under the natural resource and environment, energy, agriculture, or transportatio categories.

Credit union income.—The earnings of credi unions not distributed to members as interest or dividends are exempt from income tax.

Bad debt reserves.—Only commercial banks wit less than $500 million in assets, mutual savings banks, and savings and loan associations are permitted to deduct additions to bad debt reserves in excess of actuall experienced losses. The deduction for additions to los reserves allowed qualifying mutual savings banks an savings and loan associations is 8 percent of otherwis taxable income. To qualify, the thrift institutions mus maintain a specified fraction of their assets in the for of mortgages, primarily residential.

Special merger rules for financial institutions.—When a corporation becomes insolvent, it may reorga under special bankruptcy rules. One of the results is that the previous tax accounts of the bankrupt corporation are canceled. This includes previous claims to tax refunds with respect to excesses of allowable tax deductions over gross income, called net operating losses (NOLs).

---

[10] Settlement of a debt for an amount less than the principal of a loan.

[11] The insolvent taxpayer's carryover losses and unused credits are extinguished fi and then his basis in assets reduced to no less than amounts still owed creditors. Fin the remainder of taxable income is itself forgiven.

A special exception to this rule was provided to aid in the reorganization of troubled (insolvent) savings and loan (or thrift) institutions whose deposits were insured by the Federal Savings and Loan Insurance Corporation (FSLIC). An acquisition of an insolvent bank, if certified by FSLIC, could be treated as a tax-free reorganization. The normal requirement of continuity of ownership in the merged organization was waived to make possible the future claim of tax refunds with respect to the acquired insolvent bank's NOLs. The value of preserving these claims to tax refunds reduced the cost FSLIC would otherwise have had to bear as insurer of the insolvent bank's deposits. This provision was repealed in August 1989 with the enactment of the savings and loan rescue and reform legislation.

Interest on life insurance savings.—Savings in the form of policyholder reserves are accumulated from premium payments and interest is earned on the reserves. Such interest income is not taxed as it accrues nor when received by beneficiaries upon the death of the insured.

Small property and casualty insurance companies.– Insurance companies that have annual net premium incomes of less than $350,000 are exempted from tax; those with $350,000 to $2,100,000 of net premium incomes may elect to pay tax only on the income earned by their investment portfolio.

Insurance companies owned by exempt organizations.—Generally, the income generated by life and property and casualty insurance companies is subject to tax, albeit by special rules. Insurance operations conducted by such exempt organizations as fraternal societies and voluntary employee benefit associations, however, are exempted from tax.

Mutual funds (RIC) expenses.—Individuals may deduct miscellaneous expenses only to the extent that they exceed 2 percent of their adjusted gross income. Many of the costs incurred by individuals in managing their personal securities portfolios are among the miscellaneous deductions allowed taxpayers who itemize deductions. Mutual funds perform these portfolio management functions for their shareholders and pay out their portfolio incomes net of these expenses. The shareholders are permitted to report their fund income net of management expense. They are thereby able to deduct fully portfolio management expenses without regard to the miscellaneous deduction limitation.

Interest on consumer debt.—Deductions allowed individuals for interest paid on consumer credit are being phased out. Only 10 percent is deductible in 1990, and none in 1991 and thereafter.

Small issue industrial development bonds.—The interest on small issue industrial development bonds (IDBs) issued by State and local governments to finance private business property is excluded from income subject to tax. Depreciable property financed with small issue IDBs must be depreciated, however, using the straight-line method. The tax exemption of small issue bonds expired in 1986, except for small issue IDBs exclusively issued to finance manufacturing facilities for which the tax exemption is scheduled to expire in December 31, 1991. The budget cost of these bonds continues as long as they are outstanding.

Mortgage housing bonds.—Interest on all mortgage revenue bonds issued before January 1, 1992 by State and local governments is exempt from taxation. Proceeds are used to finance homes purchased by first-time buyers—with low to moderate incomes—of dwellings with prices under 90 percent of the average area purchase price. The annual volume of mortgage revenue bonds is restricted to State-by-State ceilings under a unified volume cap which also covers student loan bonds and IDBs.

States have been authorized to issue mortgage credit certificates (MCCs) in lieu of qualified mortgage revenue bonds because the bonds are relatively inefficient subsidies to first-time home buyers. MCCs entitle home buyers to income tax credits for a specified percentage of interest on qualified mortgage loans. In this way, the entire amount of the subsidy flows directly to the home buyer without being partly diverted to financial middlemen or bondholders. A State may not issue an aggregate annual amount of MCCs greater than 25 percent of its annual ceiling for qualified mortgage bonds. Because of the relationship between MCCs and qualified mortgage bonds, their estimates are presented as one line item in the tables.

Rental housing bonds.—State and local government issues of IDBs are restricted to multifamily rental housing projects in which 20 percent (15 percent in targeted areas) of the units are reserved for families whose income does not exceed 50 percent of the area's median income; or 40 percent for families with incomes of no more than 60 percent of the area median income. Other tax-exempt bonds for multifamily rental projects are generally issued with the requirement that all tenants must be low or moderate income families.

Limits on private activity tax-exempt bonds.—There are limits imposed on the amount of tax-exempt State and local government bonds that can be issued to fund private activity. The volume cap for single-family mortgage revenue bonds and multifamily rental housing bonds is combined with the cap for student loans and IDBs. The cap was set at $50 per capita or a minimum of $150 million for each State.

Interest and taxes on owner-occupied homes.—Owner-occupants of homes may deduct mortgage interest and property taxes on their primary and secondary residences as itemized nonbusiness deductions. The mortgage interest deduction is limited to interest on debt no greater than the owner's basis in the residence and, for debt incurred after October 13, 1987, it is limited to no more than $1 million. Interest on up to $100,000 of other debt secured by a lien on a principal or second residence is also deductible, irrespective of the purpose of borrowing, provided the debt does not exceed the fair market value of the residence. Mortgage interest deductions on personal residences are tax expenditures because the taxpayers are not required to report the value of owner-occupied housing services as gross income.

Real property installment sales.—Dealers in real and personal property, i.e., sellers that regularly hold property for sale or resale, cannot defer taxable income from installment sales until the receipt of the loan repayment. Nondealers, defined as sellers of real property used in their business, are required to pay interest to the Federal Government on deferred taxes attributable to their total installment obligations in excess of $5 million. Only properties with sales prices exceeding $150,000 are includable in the total. The payment of a market rate of interest eliminates the benefit of the tax deferral. The tax exemption for nondealers with total installment obligations of less than $5,000,000 is, therefore, a tax expenditure.

Capital gains (other than agriculture, timber, iron ore and coal).—While the top statutory rate on ordinary income is 31 percent, the rates on capital gains are limited to 28 percent.

Deferral of gains from sale of broadcasting facility to minority owned business.—The voluntary sale of appreciated assets generally requires the seller to pay tax on the gain that has accrued over the period of ownership. However, in the case of an involuntary sale, as when an owner's property must be sold in a condemnation preceding, or to implement a change in a government's regulatory policy, the owner is permitted to defer payment of tax, provided the proceeds are reinvested in similar property within a specified period. In 1979, the Federal Communications Commission instituted a policy of encouraging minority group ownership of broadcast licenses it issues or has issued. Since that time, the tax laws have been interpreted to permit voluntary sellers of licensed broadcasting facilities to defer payment of capital gains tax when the buyer has been certified as a "minority business," in effect treating the sale as "involuntary."

Ordinary income treatment of losses from sale of small business corporate stock shares.—Up to $100,000 in losses from the sale of such stock may be treated as ordinary losses, and therefore not be subject to the $3,000 annual capital loss write-off limit if the corporation's capitalization is less than $1 million.

Capital gains on home sales.—These gains are recognized and taxed only to the extent that the adjusted sales price exceeds the cost of a new home or the new home is not purchased and occupied within two years after the sale. The adjusted sales price is the amount realized (gross proceeds less selling expenses) minus qualified fixing up expenses. If a new house is constructed, it must be occupied within two years after the sale of the previous residence. The deferral of tax with respect to these gains on owner-occupied dwellings is a tax expenditure.

Capital gains on sales by owners aged 55 or older.—A taxpayer who is 55 years of age or older at the time of the sale of his residence may elect to exclude from tax up to $125,000 of the gain from its sale. This is a once-in-a-lifetime election. In effect, this provision converts some prior deferrals of tax into forgiveness of tax.

Step-up in basis of capital gains at death.—Capital gains on assets held at the owner's death are not subject to capital gains taxes. The cost basis of the appreciated assets is adjusted upward to the market value at the owner's date of death. The step-up in the heir's cost basis means that, in effect, the capital gain is forgiven.

Carryover basis of capital gains on gifts.—When a gift is made, the transferred property carries to the donee the donor's basis—the cost that was incurred when the property was first acquired. The carryover of the donor's basis allows a continued deferral of unrealized capital gains. This creates a tax preference because it is an exception to the reference tax law.

Investment credit on machinery and equipment.—Although the 10 percent investment tax credit for investment in machinery and equipment was repealed as of the end of 1986, it continues to exert a budget impact for two reasons. First, such credits as had been earned by pre-repeal investments, but which could not be taken because the taxpayer had insufficient tax liability, can be carried forward for 15 years. Second, qualified investments that were subject to a binding contract prior to the repeal date may earn investment credits when they are subsequently delivered and/or placed in service. In both instances, the amount of the credit that may be taken after 1986 is 65 percent of the amount of the pre-repeal credit and, moreover, the credit is fully taxable. The taxpayer must now reduce his recoverable basis in the qualified assets by the full amount of the credit, rather than half, as before repeal.

Accelerated depreciation of real property, machinery and equipment.—As previously noted,[12] the tax depreciation allowance provisions are part of the reference law standard, and thus not a source of tax expenditure entries under the reference method. Under the pre-1983 normal tax standard, however, a 40-year tax life for depreciable real property is the norm, so the statutory depreciation periods in effect since 19 for residential and nonresidential properties of 27.5 and 31.5 years, respectively, give rise to tax expenditures. Moreover, the tax expenditure estimates based on the normal method include not only the continuing budget effects of more accelerated pre-1987 tax allowances for real property, but also those for machinery and equipment.

---

[12] See the discussion of general accounting rules of the section on the reference tax rule and the comparison to the normal tax standard.

Safe harbor leasing.—When highly accelerated tax depreciation allowances and enhanced investment tax credits were enacted in 1981, a safe harbor leasing provision was also introduced. Under this provision, a corporation, otherwise unable to utilize the accelerated depreciation allowances and investment credit, might sell to, and then lease from, another corporation assets acquired after December 31, 1981. The terms of such leaseback agreements, absent the safe harbor leasing provision, would not qualify the lessor corporation as the owner of the assets and allow it to utilize the investment incentives for tax purposes. The selling corporation could gain at least part of the financial advantage provided by the investment tax incentives by successfully negotiating leaseback agreements below market costs. Although the provision was repealed in 1982, its budget effects persist for the duration of the safe harbor leases entered into in 1981.

Business start-up costs.—When an individual or corporation acquires or otherwise enters into a new business, certain start-up expenses, such as the costs of investigating opportunities and legal services, are normally incurred. The taxpayer may elect to amortize these outlays over 60 months although they are similar to other payments he makes for nondepreciable intangible assets that are not recoverable until the business is sold.

Graduated corporation income tax rate schedule.—The schedule is graduated, with rates of 15 percent on the first $50,000 of taxable income, 25 percent on the next $25,000, and a rate of 34 percent on income over $75,000. As compared with a flat 34 percent tax rate, the lower rates provide a $11,750 reduction in tax liability for corporations with taxable incomes of $75,000. This benefit is recaptured in the cases of corporations with taxable incomes exceeding $100,000. This is accomplished by a 5 percent additional tax on corporate incomes in excess of $100,000, but less than $335,000. At this point the $11,750 is fully recaptured. Since this rate schedule is part of the reference tax law, it does not give rise to a tax expenditure under the reference method. A flat corporation income tax rate is taken as the norm under the normal method, however, and therefore the lower rates do yield a tax expenditure under this concept.

Passive loss real estate exemption.—The Tax Reform Act of 1986 disallowed the offset of passive losses against income from other sources. Losses up to $25,000 attributable to certain rental real estate activity, however, were exempted from this rule.[13]

Treatment of Alaskan Native Corporations losses.—Tax law restricts the ability of profitable corporations to reduce their tax liabilities by merging or buying corporations with accumulated net operating losses (NOLs) and as yet unrefunded claims to investment credits. Alaska Native Corporations have a limited exemption[14] from these restrictions that includes NOLs and credits claimable prior to April 26, 1988.

Imputed interest rules.—Under reference tax law rules commonly referred to as original issue discount (OID), both the holder and seller of a financial contract are generally required to report interest earned in the period it accrues, not when the contract payments are made. Moreover, the amount of interest accruable is determined by the actual price paid for the contract, not by the stated or nominal principal and interest stipulated in the contract.[15]

Exceptions to the general rules for accounting for interest expense or income include the following: (a) permission for the mortgagor of his personal residence to treat the discount from the nominal principal of his mortgage loan, commonly called "points," as prepaid interest which is deductible in the year paid, not the year accrued; and (b) sellers of farms and small businesses worth less than $1 million, in exchange for the purchaser's debt obligation, are exempted from the OID rules. This is $750,000 more than the $250,000 exemption that the reference tax law generally allows for such transactions.

TRANSPORTATION

Shipping companies that are U.S. flag carriers.—Certain companies that operate U.S. flag vessels receive a deferral of income taxes on that portion of their income used for shipping purposes, primarily construction, modernization and major repairs to ships, and repayment of loans to finance these qualified investments. Once indefinite, the deferral has been limited to 25 years since January 1, 1987.

Tax-exempt bonds for mass commuting vehicles.—Until expiration on December 31, 1984, State and local governments were allowed to issue tax-exempt obligations to finance the purchase of mass transit commuting vehicles for lease to government transit agencies. There will be continued budget effects as long as such bonds are outstanding.

---

[13] A more detailed discussion is provided under the general accounting rules of the section on the reference tax rules and the comparison to the normal tax standard.

[14] Fifteen years after the NOL or credit claim was first experienced.

[15] Thus, when a borrower on December 31, 1988, issues a promise to pay $1,000 plus interest at 10 percent on December 30, 1989, for a total repayment of $1,100, and accepts $900 from a lender in exchange for the contract, the rules require that both parties: (a) recognize that $900 is the amount lent, so that the effective loan interest rate is not the nominal 10 percent rate but is 22.2 percent; and (b) both report $200 as interest paid or received in 1989, as the case may be.

COMMUNITY AND REGIONAL DEVELOPMENT

Five-year amortization of housing rehabilitation.—Until it expired on December 31, 1986, taxpayers could elect under certain conditions to amortize rehabilitation expenditures for low and moderate income rental housing over a five-year period in lieu of ACRS depreciation. There will be a continued budget effect from qualified expenditures for which the five-year amortization period had been selected.

Low-income housing investment.—Through 1989, a tax credit for investment in low income housing[16] was structured to have a present value of 70 percent of construction or rehabilitation costs incurred and was allowed over 10 years. For Federally subsidized projects and those involving unrehabilitated existing low income housing, the credit was structured to have a present value of 30 percent. Beginning on January 1, 1990 and continuing through December 31, 1991, the credit is extended at a present value of 70 percent, including projects financed with other Federal subsidies, but only if substantial rehabilitation is done. Notwithstanding the capital grant character of this subsidy, the investor's recoverable basis is not reduced by the substantial credit allowed.

Rehabilitation of structures.—A 10 percent investment tax credit is available for the rehabilitation of buildings that are used for business or productive activities and that were erected before 1936 for other than residential purposes. A full reduction by the amount of the credit is required in the taxpayer's recoverable basis.

Tax-exempt bonds for airports and similar facilities.—Until repealed, the interest on IDBs issued by State and local governments to finance airports, docks, wharves, and sports and convention facilities was exempt from tax. Government-owned airports, docks and wharves, as well as high-speed rail facilities that need not be government-owned, may continue to be financed with tax-exempt bond issues. These bonds are not covered by a volume cap. There will be continued budget effects as long as bonds that had been issued for private purposes are outstanding.

Exemption of certain mutuals' and cooperatives' income.—The incomes of mutual and cooperative telephone and electric companies are exempted from tax if at least 85 percent of their revenues are derived from patron service charges.

EDUCATION, TRAINING, EMPLOYMENT, AND SOCIAL SERVICES

Scholarship and fellowship income.—Scholarships and fellowships are not excluded from taxable income to the extent they exceed tuition and course-related expenses of the grantee. From a strictly economic point of view, scholarships and fellowships are either gifts not conditioned on the performance of services, or they are rebates of educational costs. Thus under the reference budget method, the exclusion is not a tax expenditure because the reference tax law does not include either gifts or price reductions in a taxpayer's gross income. However, under the normal budget method, the exclusion is considered a tax expenditure. Under the normal tax standard, gift-like transfers of government funds—and many scholarships are derived directly or indirectly from government funding—are included in gross income.

Tax-exempt bonds for educational purposes.—Interest on State and local government debt issued to finance student loans or the construction of facilities used by private nonprofit educational institutions is excluded from income subject to tax. The aggregate volume of such private activity bonds that each State may issue during any calendar year is limited.

U.S. savings bonds for education.—Interest on U.S. savings bonds, issued after December 31, 1989 may be excluded from tax if the bonds, plus accrued interest, are transferred to an educational institution as payment for educational expenses. The exclusion from tax is phased out for joint returns with adjusted gross incomes of $60,000 to $90,000 and $40,000 to $50,000 for single and head of household returns.

Dependent students age 19 or older.—Taxpayers can claim personal exemptions for dependent children age 19 or over who receive parental support payments of $1,000 or more per year, are full-time students, and do not claim a personal exemption on their own tax returns. This preferential arrangement usually generates tax savings because the students' marginal tax rates are more often than not lower than their parents' marginal tax rates.

Charitable contributions.—Contributions to charitable, religious, and certain other nonprofit organizations are allowed as an itemized deduction for individuals, generally up to 50 percent of adjusted gross income. Taxpayers whose contributions to charitable or educational organizations take the form of capital assets can claim their current value as a deduction without the taxation of any appreciation in value. Corporations could also deduct charitable contributions up to 10 percent of their pre-tax income. OBRA excluded from the alternative minimum tax base of individuals the untaxed appreciation of contributed personal property. Tax expenditures resulting from the deductibility of contributions are shown separately for educational and other institutions. Contributions to health institutions are reported under the health function.

Employer provided benefits.—Many employers provide employee benefits that are not counted in employee income. The employers' costs for these benefits are deductible business expenses. The exclusion from an employee's income of the value of child care, meals and

---

[16] New, substantially rehabilitated, and certain unrehabilitated, existing low income housing can qualify for the credit.

best copy available

lodging provided by an employer for his own convenience is a tax expenditure, as are the exclusion of housing allowances and the rental value of parsonages from the taxable income of ministers.

Until December 31, 1991, an employer may pay for his employees' tuition, fees, books, and supplies; the amounts received under the program are excluded from an employee's gross income. Employer contributions to prepaid legal services plans and the value of legal services received under such plans are also excluded from employee income through December 31, 1991.

Employer Stock Ownership Plan (ESOP) credit.—Before the provision expired in 1986, a corporation could claim a limited tax credit if an equivalent amount of its common stock was set aside in an ESOP plan. The effective subsidy rate for this form of employee compensation exceeds 100 percent. The employer is fully reimbursed for the stock he transfers, and the benefited employees are not required to include this compensation in their current year gross income. This provision will be carried as a tax expenditure until the as yet unrefunded claims to the tax credits have been satisfied.

Child and dependent care expenses.—A tax credit may be claimed by married couples for child and dependent care expenses incurred when one spouse works full time and the other works at least part time or goes to school. The credit may also be claimed by divorced or separated parents who have custody of children, and by single parents. Expenditures up to a maximum $2,400 for one dependent and $4,800 for two or more dependents are eligible for the credit. The credit is equal to 30 percent of qualified expenditures for taxpayers with incomes of $10,000 or less. The credit is reduced to a minimum of 20 percent by one percentage point for each $2,000 of income between $10,000 and $28,000.

Disabled access expenditures.—OBRA provided for a credit of 50 percent of eligible disabled access expenditures expenditures in excess of $250. The credit is limited to $5,000.

Targeted jobs credit.—Employers may claim a tax credit for qualified wages paid to individuals who begin work before January 1, 1992, and who are certified as members of various targeted groups. The amount of the credit that may be claimed is 40 percent of the first $3,000 paid during the first year of employment. The 40 percent credit also applies to the summer employment wages paid 16 and 17 year old youths who are members of low income families. Employers must reduce their deduction for wages paid by the amount of the credit claimed.

Costs of removing architectural barriers to the handicapped.—The investment cost of making any business accessible to persons suffering physical or mental disabilities may be deducted, rather than capitalized as part of the taxpayer's basis in such property and recovered by subsequent depreciation allowances, as is generally required.

Foster care payments.—Foster parents provide a home and care for children who are wards of the State, under contract with the State. Compensation received for this service is explicitly excluded from the gross incomes of foster parents, making the expenses they incur nondeductible. This activity, is, in effect, tax-exempt.

HEALTH

Employer paid medical insurance and expenses.—Employee compensation, in the form of payments by employers for health insurance premiums and other medical expenses, is deducted as a business expense by employers, but it is not included in employee gross income.

Child health insurance.—OBRA, in expanding the earned income tax credit, provided for a credit equal to 6 percent for certain health insurance expenses for certain policies that cover children. The maximum credit will be $428 in 1991 and is phased out at a rate of 4.285 percent through $21,248 of adjusted gross income.

Untaxed medicare benefits.—The employer's payment of 1.45 percent of employees' wages (up to $125,000 in 1991) into the Hospitalization Trust Fund, which finances medicare benefits, is not included in employees' reportable compensation.

Medical care expenses.—Personal expenditures for medical care (including the costs of prescription drugs and insulin) exceeding 7.5 percent of the taxpayer's adjusted gross income are deductible.

Tax-exempt bonds for hospital construction.—Interest earned on State and local government debt issued to finance hospital construction is excluded from income subject to tax.

Charitable contributions to health institutions.—Contributions to nonprofit health institutions are allowed as a deduction for individuals and corporations. Tax expenditures resulting from the deductibility of contributions to other charitable institutions are listed under the education, training, employment, and social services function.

Orphan drugs.—To encourage the development of drugs for the treatment of rare diseases or physical conditions, a tax credit is granted equal to 50 percent of the costs for clinical testing that must be completed before manufacture and distribution are approved by the Food and Drug Administration. Because the drug firm is not required to reduce its deduction for testing expenses (an R&D expenditure) by the amount of this credit, the private cost of clinically testing orphan drugs is reduced to little more than 24 cents per $1 expended. This tax expenditure expires after 1991.

pages tightly bound

Blue Cross and Blue Shield.—Although these organizations are not qualified as exempt, they are provided exceptions from otherwise applicable insurance company income tax accounting rules that effectively eliminate their tax liabilities.

INCOME SECURITY

Railroad retirement benefits.—These benefits are not generally subject to the income tax unless the recipient's gross income reaches a certain threshold discussed more fully under the social security function.

Workmen's compensation benefits.—Workmen's compensation provides payments to disabled workers. These benefits, although income to the recipients, are a tax preference because they are not subject to the income tax.

Public assistance benefits.—The exclusion from taxable income of public assistance benefits received by individuals is listed as a tax expenditure under the normal budget method because, under the normal tax rules, cash transfers from government are included in gross income. In contrast, gifts not conditioned on the performance of services, including transfers from government, are not taxable under the reference tax baseline. Therefore, under the reference budget method, the tax exclusion for public assistance benefits is not shown as a tax expenditure.

Special benefits for disabled coal miners.—Disability payments to former coal miners out of the Black Lung Trust Fund, although income to the recipient, are not subject to the income tax.

Military disability pensions.—Most of the military pension income received by current disabled retired veterans is excluded from their income subject to tax.

Pension contributions and earnings.—Certain employer contributions to pension plans, along with amounts set aside by the self-employed and individual contributions to individual retirement accounts (IRAs), are excluded from adjusted gross income in the year of contribution. Self-employed persons can make deductible contributions to their own retirement (defined contribution) plans equal to 25 percent of their income, up to a maximum of $30,000 per year.

Employees may deduct annual contributions to an IRA of $2,000 (or 100 percent of compensation, if less), or $2,250 on a joint return with only one spouse earning income, if: (a) neither the individual or spouse is an active participant in an employer-provided retirement plan; or (b) their adjusted gross income falls below $40,000 ($25,000 for a single taxpayer). The allowable IRA deduction is phased out between $40,000 and $50,000 for a joint return and $25,000 and $35,000 for a single return. Beyond these income limits, nondeductible contributions to IRAs are available to taxpayers who are active participants in employer-provided retirement plans.

Limited amounts ($8,522 in 1991) can be excluded from an employee's adjusted gross income under a qualified cash or deferred arrangement with the employer (401(k) plan). An employee's own contribution of no more than $9,500 or the 401(k) limitation (whichever is greater) may be excluded annually from an employee's adjusted gross income when placed in a tax-sheltered annuity (403(b) plan). The investment income earned by pension funds and other qualifying retirement plans is not taxable when earned, and this exemption is, therefore, also a tax expenditure.

Income earned by voluntary employee beneficiary associations.—Generally, the income generated by businesses is subject to income tax. However the income from business operations conducted by exempt organizations, such as fraternal societies and voluntary employee benefit associations, is exempt from tax.

Employer provided benefits.—Many employers cover part or all the cost of premiums or payments for: (a) employees' life insurance benefits; (b) accident and disability benefits; (c) death benefits; and (d) supplementary unemployment benefits. The amounts are deductible by the employers and are excluded as well from employees' gross incomes for tax purposes.

Employer Stock Ownership Plan (ESOP) provisions.—A special type of employee benefit plan, organized as a trust, is tax-exempt. Employer-paid contributions (the value of stock issued to the ESOP) are deductible by the employer as part of employee compensation costs. They are not included in the employees' gross income for tax purposes, however, until they are paid out as benefits. The following five special income tax provisions for ESOPs are intended to increase employee ownership of the corporations in which they are employed: (1) annual employer contributions are subject to less restrictive limitations (percentages of employee cash compensation); (2) ESOPs may borrow to purchase employer stock, guaranteed by their agreement with the employer that the debt will be serviced by his payment (deductible by him) of a portion of wages (excludable by the employees) to service the loan; (3) ESOPs lenders may exclude half the interest from their gross income; (4) employees who sell appreciated company stock to the ESOP may defer any taxes due until they withdraw benefits; and (5) dividends paid to ESOP-held stock are deductible by the employer.

Support of the aged and the blind.—Taxpayers who are blind or 65 years of age or older may take an additional $850 standard deduction if single, or $650 if married. In addition, individuals who are 65 years of age or older, or who are permanently disabled, can take a tax credit equal to 15 percent of the sum of their earned and retirement income. Qualified income is limited to no more than $2,500 for single individuals or married couples filing a joint return where only one spouse is 65 years of age or older, and up to $3,750 for joint returns where both spouses are 65 years of age or older. These limits are reduced by one-half of the taxpayer's adjusted gross income over $7,500 for single individuals and $10,000 for married couples filing a joint return.

Casualty losses.—Neither the purchase of property nor insurance premiums to protect its value are deductible as costs of earning income; therefore, reimbursement for insured loss of such property is not reportable as a part of gross income. However, a special provision permits relief for taxpayers suffering an uninsured loss. They may deduct casualty and theft losses of more than $100 each, but only to the extent that total losses during the year exceed 10 percent of adjusted gross income.

Earned income credit.—This credit may be claimed by low-income workers with minor dependents. For 1991, the credit is 16.7 percent (17.3 percent if two or more minors are present) of the first $7,140 of earned income. When the taxpayer's income exceeds $11,250, the credit is phased out at the rate of 11.93 percent (12.36 percent if two or more minors are present) and is completely phased out at $21,242 of adjusted gross income. The credit is increased by a "supplemental young child" credit of 5 percent. The supplemental credit is phased out at a rate of 5 percent of the first $7,140 of earned income and is completely phased out at $21,244 of adjusted gross income. The maximum amount of income on which the credit may be taken is adjusted for inflation, as is the income level at which the phase-out begins.

In any tax year, the amount of the credit must be reduced by the minimum tax liability of the taxpayer. As refundable credits, earned income tax credits in excess of tax liabilities are paid by the Federal Government to individuals. This portion of the credit is included in outlays, while the amount that offsets tax liabilities is shown as a tax expenditure.

SOCIAL SECURITY

OASI benefits for retired workers.—Social security benefits that exceed the beneficiary's contributions out of taxed income are deferred employee compensation and the deferral of tax on that compensation is a tax expenditure. These additional retirement benefits are paid for partly by employers' contributions that were not included in employees' taxable compensation. Up to one-half of any recipient's social security benefits and tier 1 railroad retirement benefits are included in the income tax base if a recipient's "modified adjusted gross income" plus one-half of his or her social security and railroad retirement benefits exceed a certain base amount: $32,000 for those filing joint tax returns; $25,000 for single persons; and zero for those married filing separately if they did not live apart from their spouse for the entire year. Modified AGI is equal to AGI plus foreign or U.S. possession income and tax-exempt interest, both excluded from AGI. If the modified AGI exceeds the specified base amount, either one-half of the excess or one-half of the social security or railroad retirement benefits is included in income subject to tax, whichever is less. This limits the tax expenditure to the portion of the benefit which is still excluded.

Social Security benefits for the disabled, dependents and survivors.—Benefit payments from the Social Security Trust Fund, for disability and for dependents and survivors, are excluded from the beneficiaries' gross incomes, and thus give rise to tax expenditures.

VETERANS BENEFITS AND SERVICES

Veterans benefits.—All compensation due to death or disability and pensions paid by the Veterans Administration are excluded from taxable income. In addition, benefits under the GI bill, as well as other veterans' readjustment and education benefits, are excluded from taxable income.

Tax-exempt mortgage bonds for veterans.—Interest earned on general obligation bonds issued by State and local governments to finance housing for veterans is excluded from taxable income. The issuance of such bonds is limited, however, to five preexisting State programs and to amounts based upon previous volume levels for the period January 1, 1979 to June 22, 1984. Furthermore, future issues are limited to veterans who served on active duty before 1977.

GENERAL GOVERNMENT

Public purpose State and local debt.—Interest on State and local government debt, issued to finance government activities, is excluded from Federal taxation. State and local governments, therefore, can sell debt obligations at a lower interest cost than would be possible if such interest were subject to tax. Only the excluded interest on bonds for public purposes, such as schools, roads, and sewers, is included here.

Nonbusiness State and local taxes excluding home-owner property taxes.—The deductibility of nonbusiness State and local taxes gives indirect assistance to these governments by reducing the costs of the services they provide and, thus, the burden on their taxpayers. Although general sales taxes may no longer be deducted, State and local income taxes still may be deducted.

Business income earned in U.S. possessions.—Under certain conditions, U.S. corporations receiving income from an active trade or business, or from investments located in a U.S. possession, can claim a special credit against U.S. tax otherwise due.

INTEREST

U.S. savings bonds.—The interest on U.S. savings bonds is not taxable until the bonds are redeemed, thereby deferring tax liability. The deferral is equivalent to an interest-free loan and, therefore, it is a tax expenditure.

State and local debt for veterans housing	320	315	315				270	265	265
Total (after interactions)	53.405	55.385	57.775						

$2.5 million or less. All estimates have been rounded to the nearest $5 million.

In addition, the partial exemption from the excise tax for alcohol fuels results in a reduction in excise tax receipts of $445 million in 1990; $390 million in 1991; and $355 million in 1992.

The figures in the table indicate the effect of the child medical insurance premium credit on receipts. The effect on outlays in 1992 is $550 million.

The figures in the table indicate the effect of the earned income tax credit on receipts. The effect on outlays is: 1990, $4.355 million; 1991, $4.855 million; 1992, $6.770 million.

Tax Expenditures in the Federal Unified Transfer Tax

The Federal unified transfer tax replaced the former separate gift and estate taxes in 1977. Exceptions to the general terms of the tax favor particular transferees or dispositions of transferors, similar to Federal direct expenditure or loan programs. The transfer tax provisions identified as tax expenditures satisfy the reference law criteria for inclusion in the tax expenditure budget that were described above. No additional listings based on departures of the unified transfer tax from a normal tax structure, as discussed earlier for the income tax, are included because of the lack of a generally accepted normative tax structure for transfer taxes.

Unified Transfer Tax Reference Rules

The reference tax rules for the unified transfer tax from which departures represent expenditure-like government programs include:

1. Definition of the taxpaying unit. The payment of the tax is the liability of the transferor whether the transfer of cash or property was made by gift or bequest.

2. Definition of the tax base and rules of its measurement. The base for the tax is the transferor's cumulative, taxable lifetime gifts made plus the net estate at death.

Gifts that are counted as part of the tax base are all annual transfers in excess of $10,000 to any donee except the donor's spouse. Excluded are, however, payments on behalf of family members' educational and medical expenses, as well as the cost of ceremonial gatherings and celebrations that are not in honor of the donor.

Although the value of gifts may be split by spouses for tax-reporting purposes, individuals are presumed to maintain their own separate, cumulative transfer tax records. Any gift taxes paid by decedents during their lifetime are added to the amounts of taxable gifts. These, plus the value of the final net estate, are the comprehensive pre-tax measure of the transferred aggregate wealth and thus determine the final transfer tax liability.

In general, property is valued at its fair market value at the time it is transferred. This is not necessarily the case in the valuation of property for transfer tax purposes. Executors of estates are provided the option to value assets at the time of the testator's death or up to six months later.

3. Tax rate schedule. A single graduated tax rate schedule applies to all taxable transfers. This is reflected in the name of the "unified transfer tax" that has replaced the former separate gift and estate taxes. The tax rates vary from 18 percent on the first $10,000 of aggregate taxable transfers, to 55 percent on amounts exceeding $3 million.

A $192,800 lifetime credit is provided against the tax in determining the final amount of transfer taxes that are due and payable. This allows each taxpayer to make a $600,000 tax-free transfer of assets that otherwise would be liable to the unified transfer tax.

An additional tax, at a flat rate of 55 percent, is imposed on lifetime, generation-skipping transfers in excess of $1 million. It is considered a generation-skipping transfer whenever the transferee is at least two generations younger than the transferor, as it would be in the case of transfers to grandchildren or great-grandchildren. The liability of this tax is on the recipients of the transfer. The transferor must advise them as to what part of the gift or bequest is in excess of the transferor's generation-skipping exemption.

4. Time when tax is due and payable. Donors are required to pay the tax annually as gifts are made. The amount due and payable is the difference between the end-of-year transfer tax liability on the cumulated taxable transfers and the total amount of tax that had been paid previously.

The generation-skipping transfer tax is payable by the donees whenever they accede to the gift. The net estate tax liability is due and payable within nine months after the decedent's death. The Internal Revenue Service may grant an extension of up to 10 years for a reasonable cause. Once an extension has been granted, the tax liability may be paid no less rapidly than it would have been due without the extension. Interest is charged on the unpaid tax liability at a rate equal to the cost of Federal short-term borrowing, plus three percentage points.

TAX EXPENDITURES BY FUNCTION

The 1990–92 estimates of tax expenditures in the Federal unified transfer tax are displayed by functional category in table XI–2. Outlay equivalent estimates are similar to revenue loss estimates for transfer tax expenditures and, therefore, are not shown separately.

NATURAL RESOURCES AND ENVIRONMENT

Donations of conservation easements.—Bequests for conservation are excluded from taxable estates. A conservation bequest is the value of property and easements (in perpetuity) to such property the use of which is restricted to any one or more of the following: (a) the public for outdoor recreation; (b) protection of the natural habitats of fish, wildlife, plants, etc.; (c) scenic enjoyment of the public; and (d) preservation of historic land areas and structures. Similar conservation gifts are excluded from the gift tax base and, in addition, are deductible from the donor's otherwise taxable income in the year of the gift.

AGRICULTURE

Special use valuation of farms.—Farmland owned and operated by a decedent and/or a member of the family may be valued for estate tax purposes on the basis of its "continued use" as a farm if: (a) the farmland is at least 25 percent of the decedent's gross estate; (b) the entire value of all farm property is at least 50 percent of the gross estate; and (c) family heirs to the farm agree to continue to operate the property as a farm for at least 10 years. Since continued use valuation of farmland is frequently substantially less than the fair market value, the resulting reduction in tax liability serves as a subsidy to the continued operation of family farms.

Tax deferral of closely held farms.—Decedents' estates may use a preferential, extended installment payment period of five to 15 years to discharge estate tax liabilities if the value of the farm properties exceed 35 percent of the net estates. The interest charged is only 4 percent for the first five years, rather than the standard Federal short-term borrowing rate plus three percentage points, which applies during the last 1 years of the repayment period.

Table XI–2. **ESTIMATES FOR TAX EXPENDITURES IN THE FEDERAL UNIFIED TRANSFER TAX**

(In millions of dollars)

Description	Fiscal Years		
	1990	1991	[illegible]
Natural Resources and Environment:

Credit for State death taxes	1,920	2,150	[illegible]
Grand Total (after interactions)	**3,850**	**4,300**	[illegible]

*Less than $ million.

COMMERCE AND HOUSING CREDIT

Special use valuation of closely held businesses.—The two estate tax incentives to family farming are also available to the estates of owners of nonfarm family businesses. If the same three conditions previously described are met, the real property in their estates is eligible for continued use valuation.

Tax deferral of closely held businesses.—Nonfarm family businesses that satisfy the net estate requirements qualify for preferential 15 year deferred estate tax payment. Also, the redemption of stock, required to pay funeral and administrative expenses and estate and gift taxes, may be characterized as a sale of stock. This applies in those cases where the family business is incorporated and only the closely held corporation stock, rather than the business assets, appear in the decedent's estate. This subjects to tax only the appreciation in the value of the stock whereas, under reference tax law rules, all of the proceeds generally would be taxed as a dividend. To be eligible for this special provision, the value of stock in closely held corporations must exceed 35 percent of the decedent's gross estate, less debt and funeral expenses.

EDUCATION, TRAINING, EMPLOYMENT, AND SOCIAL SERVICES

Employee Stock Ownership Plan (ESOP) deduction.—Until December 19, 1989, one-half of the proceeds from the sale of employer securities could be excluded from a taxable estate when it was sold by the executor to an ESOP. Employer securities are securities issued by corporations of which the ESOP members are employees. Disposing certain estate assets in this way reduced the cost of settling estates and also increased the supply of employer securities to ESOPs.

Tax deferral for Employee Stock Ownership Plan (ESOP).—Through July 12, 1989, an ESOP to which a decedent had bequeathed employer securities could avail itself of the preferential 15-year deferred tax payment plan previously described. The ESOP had to agree, however, to pay a pro-rata share of the estate tax for which it can be reimbursed by the estate.

Bequests to tax-exempt organizations.—These bequests are deductible from decedent's otherwise taxable lifetime transfers.

HEALTH

Bequests to health providers.—Such bequests, that are exempt from the income tax, are deductible from otherwise taxable lifetime transfers of decedents. This tax preference is similar to preferences provided through the income tax.

GENERAL GOVERNMENT

State and local death taxes.—A credit is allowed for state death taxes against any Federal estate tax that otherwise would be due. The amount of the state death tax credit is determined by a rate schedule that reaches a limit of 16 percent of the taxable estate in excess of $60,000. This provision is intended to restrain states from competing for wealthy individuals' official domicile.

Proposed Changes in Tax Expenditures

The Administration proposes a number of tax revisions that would affect the tax expenditure budget. The receipts effects and a discussion of each proposal are found in Part III, Chapter X.

Appendix

ESTIMATES FOR MAJOR TAX EXPENDITURES IN THE INCOME TAX RANKED BY REVENUE LOSS

(In millions of dollars)

Description	1992
Net exclusion of employer plans pension contributions and earnings	51,170
Deductibility of mortgage interest on owner-occupied homes	40,545
Exclusion of employer contributions for medical insurance premiums and medical care	33,470
Step-up basis of capital gains at death	26,800
Accelerated depreciation (Normal tax method)	26,100
Deductibility of nonbusiness State and local taxes other than on owner-occupied homes	20,405
Exclusion of OASI benefits for retired workers	18,000
Deductibility of charitable contributions	16,800
Exclusion of interest on public purpose State and local debt	13,950
Deferral of capital gains on home sales	13,925
Deductibility of State and Local property tax on owner-occupied homes	11,575
Exclusion of interest on life insurance savings	7,960
Exception from passive loss rules for $25,000 of rental loss	7,715
Net exclusion of IRA pension contributions and earnings	7,265
Exclusion of untaxed Medicare benefits	6,700
Inventory property sales source rules exception	4,845
Credit for child and dependent care expenses	4,395
Exclusion of interest on industrial development bonds	4,020
Reduced rates on first $100,000 of corporate income (Normal tax method)	3,755
Preferential treatment of capital gains (Normal tax method)	3,460
Exclusion of social security benefits for dependents and survivors	3,405
Exclusion of capital gains on home sales for persons age 55 and over	3,340
Exclusion of workmen's compensation benefits	3,310
Deductibility of medical expenses	3,170
Exclusion of premiums on group life insurance	2,900
Exclusion of interest on State and local debt for private nonprofit health facilities	2,895
Special merger rules for financial institutions	2,760
Earned income credit [1]	2,540
Expensing (Normal tax method)	2,470
Tax credit for corporations receiving income from doing business in United States possessions	2,325
Exclusion of benefits and allowances to armed forces personnel	2,060
Special ESOP rules (other than investment credit)	2,055
Exclusion of Keogh pension contributions and earnings	1,780
Exclusion of veterans disability compensation	1,705
Additional deduction for the elderly	1,615
Exclusion of disability insurance benefits	1,400
Exclusion of income earned abroad by United States citizens	1,305
Excess percentage over cost depletion, fuel and nonfuel minerals	1,250
Investment credit for rehabilitation of structures (other than historic)	1,145
Deferral of interest on savings bonds	1,125
Exclusion of income of foreign sales corporations	1,125
Investment credit, other than ESOP's, rehabilitation of structures, energy property, and reforestation expenditures	930
Exclusion of interest on State and local debt for rental housing	915
Credit for increasing research activities	850
Exemption of certain mutuals and cooperative income	840
Deferral of income from post 1987 installment sales	815
Exclusion of employee meals and lodging (other than military)	780
Exclusion of scholarship and fellowship and fellowship income (Normal tax method)	735
Exemption of RIC expenses from the 2% floor miscellaneous itemized deduction	560
Exemption of credit union income	470
Extending tax exempt organization status to voluntary employee beneficiary and other associations	450
Parental personal exemption for students age 19 or over	440
Exclusion of public assistance benefits (Normal tax method)	425
Deferral of income from controlled foreign corporations (Normal tax method)	350
Exclusion of empoyer provided child care	335
Exclusion of interest on State and local debt for private nonprofit educational facilities	320
Exclusion of railroad retirement system benefits	310
Exclusion of interest on state and local debt for veterans housing	265
Deductibility of casualty losses	260
Deferral of gains from sale of broadcasting facilities to minority owned businesses	260
Suspension of the allocation of research and experimentation expenditures	250
Exclusion of interest on State and local student loan bonds	245
Exclusion of parsonage allowances	240
Exclusion of interest on State and local industrial development bonds for certain energy facilities	230
Investment credit and seven-year amortization for reforestation expenditures	225
Exception from passive loss limitation for working	225
Alcohol fuel credit [2]	210

ESTIMATES FOR MAJOR TAX EXPENDITURES IN THE INCOME TAX RANKED BY REVENUE LOSS—Continued

(In millions of dollars)

Description	1992
Targeted jobs credit	205
Amortization of start-up costs	190
Exclusion of interest on owner-occupied mortgage bonds subsidy bonds	160
Expensing of certain multiperiod production costs	155
Carryover basis of capital gains on gifts	145
Permanent exceptions from imputed interest rules	145
Tax incentives for preservation of historic structures	145
Excess bad debt reserves of financial institutions	145
Deferral of tax on shipping companies	145
Special Blue Cross/Blue Shield deduction	140
Premiums on accident and disability insurance	135
Credit for child medical insurance premiums[3]	135
Alternative fuel production credit	135
Credit for disabled acess expenditures	125
Treatment of Alaska Native Corporations	120
Exclusion of military disability pensions	120
Exclusion of special benefits for disabled coal miners	105
Small life insurance company deduction	100
Credit for low-income housing investments	95
Certain nonfinancial institutions operations interest allocation rules exception	95
Exclusion of employer provided educational assistance	80
Exclusion of veterans pensions	80
Tax credit for the elderly and disabled	70
Special rules for mining reclamation reserves	50
Exclusion of GI bill benefits	50

[1] The figures in the table indicate the effect of the earned income tax credit on receipts. The effect on outlays is: 1990, $4,355 million; 1991, $4,855 million; 1992, $6,770 million.

[2] In addition, the partial exemption from the excise tax for alcohol fuels results in a reduction in excise tax receipts of $445 million in 1990, $390 million in 1991, and $365 million in 1992.

[3] The figures in the table indicate the effect of the child medical insurance premium credit on receipts. The effect on outlays in 1992 is $550 million.

[1] Amounts for major credit programs for 1992 and subsequent years are not comparable to estimates for earlier years due to credit reform. See the credit reform discussion in Chapter VIII.A.

XII.B. FEDERAL PROGRAMS BY AGENCY AND ACCOUNT

EXPLANATORY NOTE

This tabulation contains information on budget authority (BA), outlays (O), and subfunctional code number(s) for each appropriation and fund account. Budget authority amounts reflect transfers of budget authority between appropriations. All budget authority items are definite appropriations except where otherwise indicated.

Congressional action in the appropriation process occasionally takes the form of a limitation on the use of a trust fund or other fund, or of an appropriation to liquidate contract authority. Amounts for such items, which do not affect budget authority, are included here in parentheses and identified in the stub column, but are not included in the totals.
